1.0 INTRODUCTION

The Securities Industry Automation Corporation (SIAC) serves as the Processor for the Consolidated Tape Plan from its inception on August 30, 1976. In fulfilling its role as the Processor, SIAC plans, develops, operates, and maintains the Consolidated Tape System (CTS).

1.1 Background

CTS receives transactions generated by participating U.S. Stock Exchanges and the FINRA Alternative Display Facility (ADF). In addition, CTS calculates and identifies the Consolidated Last, High and Low, the Participant Open, Last, High and Low and the Limit Up-Limit Down Price Bands. CTS consolidates transactions that occurred on participating U.S. Stock Exchanges and FINRA Alternative Display Facility (ADF) and disseminates this information via computer-to-computer linkages to the financial community in the U.S. and abroad.

Essential in ensuring the timely reporting of trade information are the CTS IP Multicast data streams. CTS has a unique set of IP Multicast addresses assigned to each of its data “lines”. Data generated by each participating Exchange and the FINRA Alternative Display Facility (ADF) is assembled in prescribed message formats and transmitted to the appropriate TCP/IP Processor address via the Participants’ private communications facility. As each message is received, it is merged with messages received from all Participants, and the consolidated message stream is transmitted simultaneously to all Data Recipients via their private communications facilities. Approved Data Recipients of the CTS service can redistribute CTS data worldwide to their customers as part of their individual services or use the data for their own purposes.

Note:

- It is recommended that Data Recipients subscribe to both the Consolidated Tape System (CTS) and Consolidated Quotation System (CQS) in order to receive complete listed equity market data. Reference the CTS and CQS Multicast Interface Specification for further details at: www.ctaplan.com

1.2 Dual Site Redundancy

Computer systems that support the processing and dissemination of trade transactions are operational at primary and backup sites. The backup site provides recovery capability in the event of a disaster at the primary site. Through computerized communications equipment, CTS transaction data is disseminated from either the primary or backup site. The dual-site configuration provides system fold-over for a limited site disaster (system failure) or full site disaster (loss of facility).

In the event of a Primary Data Center failover to the Disaster Recovery site (Backup Data Center), data will be sourced via the Backup Data Center source addresses.

1.3 Failure Recovery

1.3.1 NMS Publication Process Failure Recovery

- In the event the Primary publication process encounters an unexpected state, data publication automatically switches to the Secondary publication process on the Primary Data Center
 - Data Subscribers may observe gaps on the affected output multicast lines. Any such gaps can be requested for retransmission
- In the event where both the Primary and Secondary publication processes encounter an unexpected state at the same time on the Primary Data Center, Pillar CTA initiates an automatic restart for both the processes in a recovery mode
 - There is no impact to the input Data Participants
 - Data publication is paused for the affected output line(s) and any input messages received while the process is being restarted are queued and published once the processes recover
 - Upon recovery, output block sequence for the affected line(s) is reset to a higher Block Sequence number. System transmits the Reset Block Sequence Number (Category C Type L) message and resumes data publication.
 - Security symbol state including the LULD Price Bands is recovered. However, Trade Statistics (Open/High/Low/Last) are not persisted. Subsequent Trade Statistics are calculated based on any new Trades received after the process restart.
 - Trades messages received prior to the process restart cannot be Cancelled/Corrected on the same day; but can be done on the next trading day via the Prior Day (Category P) Messages.
 - All Messages for the day can be requested for retransmission, including those that were received prior to, or, while the processes were being restarted.

1.3.2 Input Gateway Failure and Recovery

- In the event the Primary input Gateway connection encounters an unexpected state, Input Participants can reconnect to the Secondary (backup) input connection
- In the event the Input Gateway encounters an unexpected state affecting both the Primary and Secondary Input Connections for all the Data Participants, a restart of the Input Gateway can be initiated on the Primary Data Center.
 - Both Primary and Secondary Input connections are temporarily unavailable, affecting all Participants and Data Subscribers from inputting any data or requesting any retransmissions
 - Upon recovery, Input Block Sequence Number and PRN are recovered for each input line. Data Participants can reestablish connection and start submitting data. Data publication resumes.
 - There is no loss of data, all messages can be requested for retransmission.

1.3.3 Primary Data Center Failure Recovery

In the event that the Primary Data Center becomes unavailable, failover to the Disaster Recovery site (Backup Data Center) is initiated. However, if the DR site is also unavailable, then a Session Cold Restart on the Primary Data Center can be performed.

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR
MULTICAST OUTPUT BINARY SPECIFICATION

In case of a Session Cold Restart on the Primary Data Center:

- Both Primary and Secondary Input connections are temporarily unavailable, affecting all Participants and Data Subscribers from inputting any data or requesting any retransmissions
- Upon restart:
 - Output block sequence for all the lines is reset to a higher Block Sequence number and System transmits the Reset Block Sequence Number (Category C Type L) message
 - Security symbol state including the LULD Price Bands is recovered. However, Trade Statistics (Open/High/Low/Last) are not persisted. Subsequent Trade Statistics are calculated based on any new Trades received after the process restart.
 - Trades messages received prior to the process restart cannot be Cancelled/Corrected on the same day; but can be done on the next trading day via the Prior Day (Category P) Messages.
 - Input Lines are enabled and Data Publication Resumes
 - Messages prior to the Restart cannot be requested for Retransmission

1.4 Scope

This specification defines the interface and message format requirements for recipients of the CTS data feed via connectivity to the National Market System (NMS) IP Multicast distribution network.

1.5 Data Feed Reference Material

Technical Specifications

For Technical Specifications visit www.ctaplan.com - and select Tech Specs tab for the following:

- CQS Multicast Output Specification
- CTS Multicast Output Specification
- Common IP Multicast Distribution Network Specification
- Automated Retransmission Facility User Guide

Consolidated Tape Association (CTA) Announcements

CTA Announcements including feed enhancements, traffic rates, etc. visit www.ctaplan.com

Future Data Feed Enhancements

Future enhancements and/or modifications may require system changes for your firm. Please refer to the CTA Plan website www.ctaplan.com to obtain the latest CTA Notifications and Technical Specification documents. **To automatically receive these Notifications and System Alerts, subscribe at:** <https://www.ctaplan.com/subscribe>

Data Feed Related Resources

For customers selecting to initiate ICE Global Network (IGN), formerly known as the Secure Financial Transaction Infrastructure (SFTI), connections to CTS:

- Submit a request at: <https://www.theice.com/contact-us/connectivity>
- Contact IGN Sales at: clientnetworks@theice.com
- For more information on IGN, including documentation such as Customer and Technical guides reach out to an IGN representative at: iceglobalnetwork-info@theice.com

2.0 GENERAL DESIGN OF DATA DISTRIBUTION NETWORK

The NMS IP Multicast distribution network disseminates all market data information in the form of multicast addressed IP datagrams.

Data available via the NMS IP Multicast distribution network includes:

CTS Real-Time Production Data

A copy of each CTS real-time production message is available from SIAC's production/primary site. These redundant copies are delivered via two distinct multicast data streams.

CTS Real-Time Retransmission Data

The retransmission data streams are available from SIAC's production/primary site, and are delivered via two redundant retransmission multicast data streams.

CTS After-Hours Playback Data

There is a separate IP Multicast data feed dedicated for after-hours playback test data. The playback data is made available via a single set of multicast data feeds.

IP Multicast Network Interface

The requirements for the NMS IP Multicast distribution network interface are defined in the addendum to this document, "Common IP Multicast Distribution Network Recipient Interface Specification" which can be accessed at website: <http://www.ctaplan.com> and select the Tech Specs tab.

3.0 TRANSMISSION CHARACTERISTICS

3.1 Transmission Block Structure

Encapsulated within each IP packet is a single transmission block. One type of transmission Block is used for all types of messages. A Block can have a maximum of 1,000 bytes inclusive of Block Header, Block Data, and Block Pad Byte.

Block Structure	Length
Block Header	20
Block Data	Variable
Block Pad Byte (optional)	1

3.2 Block Data

The Block Data consists of one or more CTS messages. A message consists of a Message Header, which is of fixed length and format, and Message Data (body), which is variable in length and format. Category C – Control messages are each sent in their own individual block.

The Block Data structure is as follows:

Block Data Structure
Message 1 Data
Message 2 Data
~~~
Message N Data

#### 3.3 Block Pad Byte

**Byte.** Unsigned integer contains binary zero (Hex 0x00). Only used when the size of a block consists of an odd number of bytes. In instances of odd number of bytes, the Block Pad Byte is added to the Block to ensure the Block is an even number of bytes.

### 3.4 Data Type

The following data types are used by CTS:

Type	Description
<b>NUMERIC – Big-Endian (Network Byte Order)</b>	
byte	Big-Endian Unsigned 1 Byte Integer
short	Big-Endian Unsigned 2 Byte Integer
integer	Big-Endian Unsigned 4 Byte Integer
long	Big-Endian Unsigned 8 Byte Integer
signed byte	Big-Endian Signed 1 Byte Integer
signed short	Big-Endian Signed 2 Byte Integer
signed integer	Big-Endian Signed 4 Byte Integer
signed long	Big-Endian Signed 8 Byte Integer
<b>ALPHA/ALPHANUMERIC/SPECIAL/PRINTABLE</b>	
char	Single printable ASCII character
char [ ]	Fixed length printable ASCII characters
varchar [ ]	Variable lengths printable ASCII characters

#### 3.4.1 Numeric Types

1. All numeric fields will be in Big-Endian (Network Byte Order) format
2. Numeric types (byte, short, integer and long) represent sequence numbers, timestamps, prices and sizes
3. Prices represented by short fields have implied 2 decimal places
4. Prices represented by long fields have implied 6 decimal places
5. Any numeric value that is unused or does not apply to a given message type has a value set to 0
6. Signed integers are represented as 2's complement

The maximum range values for the numeric fields are as follows:

- 1 byte unsigned integer: 0 – 255 (byte)
- 2 byte unsigned integer: 0 – 65,535 (short)
- 4 byte unsigned integer: 0 – 4,294,967,295 (integer)
- 8 byte unsigned integer: 0 – 18,446,744,073,709,551,615 (long)

Select values represented as 2's complement, will have signed integers with the following range:

- 8 byte signed integer: -9,223,372,036,854,775,808 to +9,223,372,036,854,775,807 (signed long)

### **3.4.2 Alpha/Alphanumeric/Special/Printable Types**

1. ASCII printable character codes 32 – 126
2. Left justified and padded on the right with spaces for fixed length fields

### 3.5 Block Header

Field	Length	Type
Version	1	Byte
Block Size	2	Short
Data Feed Indicator	1	Char
Retransmission Indicator	1	Char
Block Sequence Number	4	Integer
Messages In Block	1	Byte
SIP Block Timestamp	8	2 x Integer
Block Checksum	2	Short
<b>Total Length</b>	<b>20</b>	

#### 3.5.1 Version

**Byte.** Indicates the CTS binary protocol version and allows for Block Header, Message Header and Message formats to be updated while still supporting previous versions of headers/message formats during transition. Version value is set to 2 for first/initial version for CTA Pillar SIP.

#### 3.5.2 Block Size

**Short.** Indicate size in bytes of the entire transmission block.

### 3.5.3 Block Sequence Number

**Integer.** The Block Sequence Number denotes the sequence number of the first message in the block. If a Block contains more than one message, any messages following the first message are implicitly numbered sequentially. As such, the Block Sequence Number in the next Block is incremented by the number of messages published in the previous Block.

Block Sequence Number rollover occurs after 4,294,967,295. On a per multicast line basis, the Block Sequence Number on the multicast lines are set to zero at the start of each day, and incremented each time a block is transmitted, with the following exceptions:

1. The Block Sequence Number in retransmitted blocks contains the Message Sequence Number of the first message in the retransmitted Block
2. The Block Sequence Number field in the Block Header of a Category C Type L message (Reset Block Sequence Number) Block contains the number to which the Block Sequence Number counter is to be reset. This number is either one (1) in the event the sequence number rolls over from 4,294,967,295 or a number greater than the highest number previously transmitted.
3. The block containing a Category C Type A message (Start of Day) or Category C Type Z message (End of Day) contains the Block Sequence Number one higher than the last transmitted message block.
4. The block containing a Category C Type T (Line Integrity) message contains the message Sequence Number of the last block transmitted, which was not a retransmitted block.
5. Should CTS experience a line failure and recovery, the Block Sequence Number for the recovered line(s) can be reset to a number greater than the last message sequence number transmitted once message transmission is resumed.

### 3.5.4 Messages in Block

**Byte.** The number of messages contained in the transmission block.

### 3.5.5 Block Checksum

**Short.** Lower 2 bytes of the 4 byte sum of all the bytes in the block, excluding this Block Checksum field.

### 3.5.6 Data Feed Indicator

**Char.** Value is 'T' for Consolidated Tape System (CTS).

### 3.5.7 Retransmission Indicator

**Char.** Contains either a 'O' (indicating an original message) or 'V' (indicating a retransmitted block).

### 3.5.8 SIP Block Timestamp

**2 x Integer (pair of integers).** Contains the block timestamp and is the SIP time that processing a block of messages is completed. The first integer contains the number of seconds from epoch 1/1/1970, 00:00:00 UTC. The next integer contains the nanosecond portion of the time (e.g., 972402315).

Precision Time Protocol (PTP) is utilized to provide a standard method to synchronize devices on a network with sub-microsecond precision. The protocol synchronizes slave clocks to a master clock ensuring that events and timestamps in all devices use the same time base.

SIAC recommends to represent this time in HH:MM:SS.mmmµµµnnn format Eastern Time (ET) when communicating with SIAC.

For Retransmissions, the SIP Block Timestamp contains the timestamp representing when the first message in the retransmitted block was originally processed by SIP.

### 3.6 Retransmission Capability

CTS stores all data transmitted to the Data Recipients for a single trading day to facilitate data retransmission. If Data Recipients do not receive a block(s), a retransmission of the missed messages can be requested. Retransmission requests are accepted in the period following transmission of the Start of Day message and before the transmission of the End of Day message.

The following Message Category and Types are not included in retransmissions:

Message Category	Message Type	Description
C	A	Start of Day
C	T	Line Integrity

The Automated Retransmission Facility is utilized for automatically receiving and processing CTS block retransmission requests.

A Data Recipient may request automated retransmission(s) of missed messages by connecting directly through IGN, formerly known as SFTI, to the Automated Retransmission Facility via TCP/IP addresses and ports. A Data Recipient is required to enter their assigned user ID and password along with system, line, and message sequence number information. The requested message(s) are re-published over the dedicated Retransmission multicast streams. An '**Automated Retransmission Facility User Guide**' for automated retransmission requests can be accessed at the following website: <http://www.ctaplan.com> and select the Technical Specs tab.

All retransmitted CTS blocks contain **only** 'V' in the Retransmission Indicator field of the Block Header. The Block Sequence Number field in the Block Header of each retransmitted block contains the Message Sequence Number of the first message in the retransmitted block.

**Note:**

- It is the responsibility of the Data Recipient to ignore retransmitted messages not requested by them.

## 4.0 MESSAGE HEADER

The Message Header uniquely identifies the Category and Type of each message within a Block. The Message Header can represent an entire message or appears before the Message Body segment in each message transmitted. The Message Header contains the following bytes and conforms in all cases to the following data fields:

Field	Length	Type
Message Length	2	Short
Message Category	1	Char
Message Type	1	Char
Participant ID	1	Char
Timestamp 1	8	2 x Integer
Message ID	1	Byte
Transaction ID	4	Integer
Participant Reference Number	8	Signed Long
<b>Total Length</b>	<b>26</b>	

### 4.1 Message Length

**Short.** The Message Length identifies the total message length inclusive of the Message Header and Message Body.

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

## 4.2 Message Category and Message Type Table

Message Category	Message Type	Value
<b>Administrative</b>		
A	A	Start of End of Day Summary
A	B	End of End of Day Summary
A	C	Start of Start of Day Summary
A	D	End of Start of Day Summary
<b>Control</b>		
C	A	Start of Day
C	L	Reset Block Sequence Number
C	P	Disaster Recovery Data Center Activation
C	T	Line Integrity
C	Z	End of Day
<b>Index</b>		
I	I	Index
I	Q	Bid and Offer Index
<b>Market Status</b>		
M	K	Market-Wide Circuit Breaker Decline Level Status
M	L	Market-Wide Circuit Breaker Status
M	N	Approximate Adjusted Volume Market Center
M	O	Approximate Trades and Total Dollar Value
M	P	Crossing Session Summary
<b>Prior Day</b>		
P	C	Prior Day Trade Correction
P	T	Prior Day Trade
P	X	Prior Day Trade Cancel/Error
<b>Summary</b>		
S	A	Consolidated Start of Day Summary
S	B	Participant Start of Day Summary
S	C	Consolidated End of Day Summary
S	D	Participant End of Day Summary
<b>Trade</b>		
T	A	Auction Status
T	C	Trade Correction
T	L	Long Trade
T	S	Trading Status
T	T	Short Trade
T	X	Trade Cancel/Error

#### 4.2.1 Message Category

**Char.** The Message Category represents the message classification. Refer to Message Category and Message Type Table *section 4.2*.

#### 4.2.2 Message Type

**Char.** The Message Type together with the Message Category identifies the message. Refer to Message Category and Message Type Table *section 4.2*.

#### 4.3 Participant ID

**Char.** Participant ID identifies the Participant or Processor that generated the message.

Code	Value
A	NYSE American, LLC (NYSE American)
B	NASDAQ OMX BX, Inc. (NASDAQ OMX BX)
C	NYSE National, Inc. (NYSE National)
D	FINRA Alternative Display Facility (ADF)
H	MIAX Pearl Exchange, LLC (MIAX)
I	International Securities Exchange, LLC (ISE)
J	Cboe EDGA Exchange, Inc. (Cboe EDGA)
K	Cboe EDGX Exchange, Inc. (Cboe EDGX)
L	Long-Term Stock Exchange, Inc. (LTSE)
M	NYSE Chicago, Inc. (NYSE Chicago)
N	New York Stock Exchange, LLC (NYSE)
P	NYSE Arca, Inc. (NYSE Arca)
S	Consolidated Tape System (CTS)
T	NASDAQ Stock Market, LLC (NASDAQ)
U	Members Exchange, LLC (MEMX)
V	Investors' Exchange, LLC. (IEX)
W	CBOE Stock Exchange, Inc. (CBSX)
X	NASDAQ OMX PSX, Inc. (NASDAQ OMX PSX)
Y	Cboe BYX Exchange, Inc. (Cboe BYX)
Z	Cboe BZX Exchange, Inc. (Cboe BZX)

#### 4.4 Timestamp 1

**2 x Integer (pair of integers).** Timestamp 1 is a Participant-provided timestamp representing the number of nanoseconds since Epoch. The first integer contains the number of seconds from epoch 1/1/1970, 00:00:00 UTC. The next integer contains the nanosecond portion of the time (e.g., 972402315). For any messages generated by CTS, e.g., Messages generated on behalf of a Participant, Price Band messages, Control messages and Market Status messages, the Timestamp 1 field will be set to current SIP time.

- **If from an Exchange: Timestamp 1** denotes the Exchange Matching Engine Publication timestamp for a transaction. Exchanges use a clock sync methodology ensuring that timestamps are accurate within tolerances of 100 microseconds or less. Exchanges shall provide the timestamp in terms of nanoseconds since Epoch.
- **If from the FINRA Alternative Display Facility (ADF) or a FINRA Trade Reporting Facility (TRF):** Timestamp1denotes the time of execution that a FINRA member reports to the FINRA ADF or a FINRA TRF. FINRA shall provide such times to the Processor in nanoseconds since Epoch.

#### 4.5 Participant Reference Number

**Signed Long.** Set to Zero. The Participant Reference Number must be unique by Participant ID, by Trade Reporting Facility (TRF), and by Security Symbol for trade corrections, cancel and errors. A Participant Reference Number must be increasing (not necessarily in sequential order, e.g., different symbols, ABC and XYZ may have the same Participant Reference Number over different lines, however symbol ‘ABC’ with Participant Reference Number ‘123456’ on line 1 cannot be repeated over any other line. Zero, positive and negative Participant Reference Numbers will be sent.

#### 4.6 Message ID

**Byte.** The Message ID Identifies the individual message within the block beginning with number one (1).

#### 4.7 Transaction ID

**Integer.** The Transaction ID will be populated by CTS and is **Reserved for Internal Use only**.

**Note:**

- Data Recipients should ignore/disregard this field to the extent that it does not impact their normal data processing.

## 5.0 MESSAGE ROUTING

In total, CTS messages are disseminated over **twenty-six (26)** IP multicast lines designated as:

1. Line 1 (**L1**) through Line 12 (**L12**) for Network 'A' (NYSE listed securities)
2. Line 1 (**L1**) through Line 12 (**L12**) for Network 'B' (Cboe BZX, NYSE ARCA and NYSE American listed securities) '.
3. Line 1 (**L1**) and Line 2 (**L2**) Network 'B' Index lines.

Note: The 'Primary Listing Market Participant ID' field will explicitly identify the Listing Market associated with their listed security.

Index Messages are routed over Network 'B' L1-L2 IP multicast lines according to the network and security symbol range distribution

All other Messages are routed over the twenty-four IP multicast lines according to the network and security symbol range distribution except for the following:

1. Control Messages (Category C) are distributed over all Network 'A' and Network 'B' lines inclusive of Index lines
2. Market Status Messages - 'Market-Wide Circuit Breaker Decline Level Status (Category M Type K)' and 'Market-Wide Circuit Breaker Status (Category M Type L)' are distributed over all Network 'A' and Network 'B' lines inclusive of Index lines
3. Market Status Messages - 'Approximate Adjusted Volume Market Center (Category M Type N)', 'Approximate Trades and Total Dollar Value (Category M Type O)' and 'Crossing Session Summary (Category M Type P)' for Tape A are distributed over all Network 'A' lines
4. Market Status Messages - 'Approximate Adjusted Volume Market Center (Category M Type N)', 'Approximate Trades and Total Dollar Value (Category M Type O)' and 'Crossing Session Summary (Category M Type P)' for Tape B are distributed over all Network 'B' lines
5. Prior Day (Category P) messages for any inactive Security Symbols can be routed over either the Network A or B multicast lines, based on the Participant ID. Messages received from NYSE (Participant ID = N) are routed to Network A multicast lines while messages received from any other participant are routed to Network B multicast lines. Prior Day messages for active Security Symbols are disseminated on the respective network lines as per their Listing Markets.

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

**MESSAGE ROUTING** *(continued)*

Traffic for CTS Network ‘A’ and Network ‘B’ messages will be routed by network and security symbol to twenty-six (26) assigned multicast lines as follows:

CTS NETWORK ‘A’ Symbol Range Distribution			CTS NETWORK ‘B’ Symbol Range Distribution		
Multicast Lines	From	To	Multicast Lines	From	To
1	A	ANZZZZ	1	A	DZZZZZ
2	AO	BXZZZZ	2	E	EWZZZZ
3	BY	CRZZZZ	3	EX	GZZZZZ
4	CS	ELZZZZ	4	H	IWEZZZ
5	EM	GLZZZZ	5	IWF	KZZZZZ
6	GM	IQZZZZ	6	KJ	RMZZZZ
7	IR	LVZZZZ	7	RN	SKZZZZ
8	LW	NOZZZZ	8	SL	SPZZZZ
9	NP	PRZZZZ	9	SQ	UMZZZZ
10	PS	STZZZZ	10	UN	VNZZZZ
11	SU	USZZZZ	11	VO	XLEZZZ
12	UT	ZZZZZZ	12	XLF	ZZZZZZ
			Index Messages		
			Multicast Lines	From	To
			1	A	MZZZZZ
			2	N	ZZZZZZ

**Test Messages:**

- CTS messages containing dedicated ‘Test Symbols’ for Listing Exchange NYSE will route to multicast lines for Network ‘A’ according to the network and security symbol range distribution.
- CTS messages containing dedicated ‘Test Symbols’ for Listing Exchanges Cboe BZX, IEX, NYSE ARCA and NYSE American will route to multicast lines for Network ‘B’ according to the network and security symbol range distribution.
- Dedicated ‘Test Symbols’ are listed in the Field Descriptions section under the ‘Security Symbol’ field.

**Note:**

- Data Recipients are responsible for handling any symbol over any line. Redistribution of traffic may not occur intraday. Notification may not be sent to the Data Recipients regarding redistribution of traffic.

## 6.0 MESSAGE FORMATS

The Message Category and Message Type identify the Message and determine the format of the body. Each message transmitted by CTS consists of a Message Header and Message Body or Message Header only.

All messages formats have fixed field which is determined by reading the Message Header and Message Body.

A field description is provided as part of the Block Header format, Message Header format, Message Body or in the **Field Descriptions** section of this document.

## **6.1 Administrative Messages – Category A**

Administrative Category A messages consist of either the standard Message Header only, or the standard Message Header immediately followed by Unformatted free form text. If the Administrative contains text (printable ASCII characters only), its format depends on the Message Type.

Administrative Category A messages that consist of the **Message Header only** is transmitted to signal the beginning and end of transmission of Summary messages.

### **6.1.1 Start of End of Day Summary – Category A Type A**

The Start of End of Day Summary message consists of the Message Header only and is used to signal the start of Consolidated End of Day Summary and Participant End of Day Summary message iterations.

### **6.1.2 End of End of Day Summary – Category A Type B**

The End of End of Day Summary message consists of the Message Header only and is used to signal the end of Consolidated End of Day Summary and Participant End of Day Summary message iterations.

### **6.1.3 Start of Start of Day Summary – Category A Type C**

The Start of Start of Day Summary message consists of the Message Header only and is used to signal the start of Start of Day Summary message iterations.

### **6.1.4 End of Start of Day Summary – Category A Type D**

The End of Start of Day Summary message consists of the Message Header only and is used to signal the end of Start of Day Summary message iterations.

## 6.2 Control Messages – Category C

Control messages consist of the standard **Message Header only**, and are **not** blocked with any other messages including Control messages.

When included in a retransmission sequence, the Retransmission Indicator field of a Control message contains code ‘V’; otherwise this field contains the alphabetic upper case character ‘O’ (meaning original message).

### 6.2.1 Start of Day – Category C Type A

The Start of Day message signals the start of normal data dissemination over the multicast lines. A single Start of Day message is sent with the Block Sequence Number field set to zero.

### 6.2.2 Reset Block Sequence Number – Category C Type L

The Reset Block Sequence Number message is transmitted when the Block Sequence Number on an output multicast line requires resetting.

The Block Sequence Number field in the Reset Block Sequence Number message contains the number to which the Block Sequence Number counter is to be reset. This number is higher than the highest Block Sequence Number previously transmitted.

### 6.2.3 Disaster Recovery Data Center Activation – Category C Type P

The Disaster Recovery Data Center Activation message is transmitted to signify that the Consolidated Tape System (CTS) has switched processing from the Primary Data Center to the Disaster Recovery Data Center. The Disaster Recovery Data Center Activation message is preceded by the transmission of Reset Block Sequence Number Category C Type L messages.

The Block Sequence Number field of the Disaster Recovery Data Center Activation message contains a number greater than the highest Block Sequence Number previously transmitted.

### 6.2.4 Line Integrity – Category C Type T

The Line Integrity message is transmitted over the multicast lines at intervals of ten (10) seconds to verify continued integrity of multicast transmission. The Line Integrity message transmission does not interrupt a transmission in progress.

The Block Sequence Number is not incremented for Line Integrity messages. The Block Sequence Number field will contain the Sequence Number of the last transmitted message.

#### **6.2.5 End of Day – Category C Type Z**

The End of Day message is transmitted over the multicast lines to advise all Data Recipients that there are no further messages to be transmitted for the day.

The Block Sequence Number field of the End of Day message contains a number one greater than the highest Block Sequence Number previously transmitted.

**Note:**

- Under normal conditions, upon receiving the End of Day Category C Type Z message, it is the Data Recipient's responsibility to terminate their production CTS output multicast line feeds from SIAC.
- System will continue to publish Line Integrity (Category C Type T) Messages until the CQS multicast lines are brought down.

### 6.3 Index Messages – Category I

Index messages are used to provide index value information of a security.

#### 6.3.1 Index – Category I Type I

The Index message contains the index and the index value.

Field Name	Length	Type
Index Symbol	11	Char [ ]
Index Value	8	Signed Long
<b>Total Length</b>	<b>19</b>	

#### 6.3.2 Category I Type Q – Bid and Offer Index

The Bid and Offer Index message contains the index Bid and Offer index values.

Field Name	Length	Type
Index Symbol	11	Char [ ]
Bid Index Value	8	Signed Long
Offer Index Value	8	Signed Long
<b>Total Length</b>	<b>27</b>	

## 6.4 Market Status Messages – Category M

Market Status messages are used to provide market data information.

Unless otherwise noted, detailed information on each field is contained in alphabetical order in the **Field Descriptions** section of this document.

### 6.4.1 Market-Wide Circuit Breaker Decline Level Status – Category M Type K

The Market-Wide Circuit Breaker Decline Level Status message is used to report the calculated Level 1, Level 2 and Level 3 threshold values for the current trading day necessary to trigger a circuit breaker. Levels are reset each trading day based on the closing value of the S&P 500 Index. If Levels are set as a result of inaccurate activity, Levels will be reset and disseminated. The most recently disseminated Levels will be in effect for that trading day.

**Note:**

- MWCB levels are index values (not prices) and have implied 6 decimal places.
- The Market-Wide Circuit Breaker Decline Level Status Message will be disseminated by CQS on a daily trading day basis at approximately 7:00 am and at 8:00 am ET; and additional occurrences if necessary, e.g., due to erroneously set Levels.

Field Name	Length	Type
MWCB Level 1	8	Signed Long
MWCB Level 2	8	Signed Long
MWCB Level 3	8	Signed Long
Reserved	1	TBD
<b>Total Length</b>	<b>25</b>	

#### 6.4.2 Market-Wide Circuit Breaker Status – Category M Type L

The Market-Wide Circuit Breaker Status message is used to report the Market-Wide Circuit Breaker threshold Level that has been breached. Each Level will be disseminated only once during the trading day, unless a Level is breached as a result of erroneous activity. The most recently disseminated breached Level will be in effect.

The duration of Market-Wide Circuit Breaker Level 1 and Level 2 Regulatory Trading Halts is fifteen minutes. Following Level 3 Market-Wide Circuit Breaker Regulatory Trading Halts, trading will be halted for the remainder of the trading day and carried over to the following trading day in a Regulatory Trading Halted state.

Field Name	Length	Type
Market-Wide Circuit Breaker Level Indicator	1	Char
Reserved	1	TBD
<b>Total Length</b>	<b>2</b>	

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

### 6.4.3 Approximate Adjusted Volume Market Center – Category M Type N

The Approximate Adjusted Volume Market Center message is a variable length record and can accommodate up to the total number of active Participants. This message is used to report the volume of adjusted trading activity for each Participant. As CTS calculates and generates these messages, the Message Header Participant ID field will be populated with “S” for CTS.

Field Name	Length	Type
<b>General Trade Information</b>		
Number of Participants	1	Byte
<b>Participant #1 through Total Number of Active Participants</b>		
Participant ID	1	Char
Trade Total Volume	8	Long
Total Length	<b>1+(9*# of Active Participants)</b>	

#### 6.4.4 Approximate Trades and Total Dollar Value – Category M Type O

The Approximate Trades and Total Dollar Value message allows a Participant to report the total trades and total dollar value of trades at their respective market centers. A Participant is required to utilize all fields in the Approximate Total Trades and Dollar Value message.

Field Name	Length	Type
Total Trades	4	Integer
Dollar Value	8	Long
<b>Total Length</b>	<b>12</b>	

#### 6.4.5 Crossing Session Summary – Category M Type P

The Crossing Session message is used to report the total volume and dollar value of trades transacted after the close of a Participant's regular session.

Field Name	Length	Type
Crossing Session I Total Trades Volume	8	Long
Crossing Session II Dollar Value	8	Long
Crossing Session II Total Trades Volume	8	Long
<b>Total Length</b>	<b>24</b>	

## 6.5 Prior Day Messages – Category P

Prior Day messages are used to report CTA eligible Equity, Local Issue or Bond trades, corrections, cancels or errors for transactions that occurred **earlier than the current trading day** and had not been reported. Trade Reporting Facility ID is restricted to CTA eligible Equity transactions.

Prior Day Messages can be reported for Security Symbols that have been delisted and no longer actively trading on the current trading day. Any Prior Day Messages for such Security Symbol can be routed over either the Network A or B multicast lines based on the Participant ID (refer Message Routing).

### 6.5.1 Prior Day Trade Correction – Category P Type C

The Prior Day Correction message is used to correct a transaction originally reported on a trading day earlier than the current trading day. Corrections to current day transactions are reported using the Trade Correction message Category ‘T’ Type ‘C’.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Corrected Sale Condition	4	Char [ ]
Corrected Trade Price	8	Long
Corrected Trade Volume	4	Integer
Corrected Seller’s Sale Days	1	Byte
Corrected Stop Stock Indicator	1	Char
Corrected Trade Through Exempt Indicator	1	Char
Corrected Short Sale Restriction Indicator	1	Char
Corrected Prior Day Trade Date and Time	8	2 x Integer
Trade Reporting Facility ID	1	Char
Original Sale Condition	4	Char [ ]
Original Trade Price	8	Long
Original Trade Volume	4	Integer
Original Seller’s Sale Days	1	Byte
Original Stop Stock Indicator	1	Char
Original Trade Through Exempt Indicator	1	Char
Original Short Sale Restriction Indicator	1	Char

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

Original Prior Day Trade Date and Time	8	2 x Integer
<b>Total Length</b>	<b>69</b>	

### 6.5.2 Prior Day Trade – Category P Type T

The Prior Day Trade message is used to report a CTA Equity, Local Issue or Bond transaction which occurred **earlier than the current trading day** and was not reported.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Sale Condition	4	Char [ ]
Trade Price	8	Long
Trade Volume	4	Integer
Seller's Sale Days	1	Byte
Stop Stock Indicator	1	Char
Trade Through Exempt Indicator	1	Char
Short Sale Restriction Indicator	1	Char
Trade Reporting Facility ID	1	Char
Prior Day Trade Date and Time	8	2 x Integer
<b>Total Length</b>	<b>41</b>	

### 6.5.3 Prior Day Trade Cancel/Error – Category P Type X

The Prior Day Trade Cancel/Error message is used for CTA eligible Equity, Local Issue or Bond information to report the cancellation of a trade (buyer and seller agrees to cancel a trade) or error a trade that never took place but was reported. This message format is strictly used to cancel/error a trade or correction originally reported earlier than the current day using the Prior Day Long Trade message or Prior Day Trade Correction message formats. Cancel/Errors to current day transactions are reported using the Cancel/Error message, Category ‘T’ Type ‘X’.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Sale Condition	4	Char [ ]
Trade Price	8	Long
Trade Volume	4	Integer
Seller’s Sale Days	1	Byte
Stop Stock Indicator	1	Char
Trade Through Exempt Indicator	1	Char
Short Sale Restriction Indicator	1	Char
Trade Reporting Facility ID	1	Char
Prior Day Trade Date and Time	8	2 x Integer
Cancel/Error Action	1	Char
<b>Total Length</b>	<b>42</b>	

## 6.6 Summary Messages – Category S

Summary messages are used to provide CTA eligible Equity, Local Issue and Bond summary information by security.

### 6.6.1 Consolidated Start of Day Summary – Category S Type A

The Consolidated Start of Day Summary messages are transmitted shortly after the Multicast Line ‘Start of Day’ message. The Participant ID field of the Message Header is populated with ‘S’, signifying that the message is generated by the Consolidated Tape System. It provides, by security, consolidated previous close price and previous close price date information for CTA eligible Equity, Local Issues and Bonds.

If there is no price associated with a security, e.g., an Initial Public Offering (IPO), no Consolidated Start of Day Summary message is generated for that security symbol. Other messages can be intermingled within this message transmission. This message transmission is preceded by a Category ‘A’ Type ‘C’ Start of Start of Day Summary and ended with a Category ‘A’ Type ‘D’ End of Start of Day Summary administrative textual messages.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Participant ID	1	Char
Previous Close Price Date	4	Integer
Previous Close Price	8	Long
Short Sale Restriction Indicator	1	Char
Primary Listing Market Participant ID	1	Char
Financial Status Indicator	1	Char
Number of Participants	1	Byte
<b>Total Length</b>	<b>29</b>	

### 6.6.2 Participant Start of Day Summary – Category S Type B

The Participant Start of Day Summary messages are transmitted shortly after the Multicast Line ‘Start of Day’ message. The Participant ID field of the Message Header is populated with ‘S’, signifying that the message is generated by the Consolidated Tape System. It provides, by security, Participant previous close price and previous close price date information for CTA eligible Equity, Local Issues and Bonds.

If there is no price associated with a security, e.g., an Initial Public Offering (IPO), no Participant Start of Day Summary message is generated for that security symbol. Other messages can be intermingled within this message transmission. This message transmission is preceded by a Category ‘A’ Type ‘C’ Start of Start of Day Summary and ended with a Category ‘A’ Type ‘D’ End of Start of Day Summary administrative textual messages.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Participant ID	1	Char
Previous Close Price Date	4	Integer
Previous Close Price	8	Long
<b>Total Length</b>	<b>25</b>	

### 6.6.3 Consolidated End of Day Summary – Category S Type C

The Consolidated End of Day Summary messages are transmitted shortly before the "Goodnight" messages. The Participant ID field of the Message Header is populated with 'S', signifying that the message is generated by the Consolidated Tape System. The Consolidated End of Day Summary message provides by security, the Consolidated High, Low, Last and Volume for CTA eligible Equity, Local Issues and Bonds.

In cases where no trades qualify to update the **Last Price**, the previous close Last Price is provided and the **Previous Close Price Date** field is populated with the date associated with the **Last Price** value. If a trade qualifies to update the **Last Price**, the **Previous Price Close Date** field is set to zero. If there is no trading activity for a security for the day, a Consolidated End of Day Summary will not be generated for that security symbol. This message transmission is preceded by a Category 'A' Type 'A' Start of End of Day Summary and ended with a Category 'A' Type 'B' End of End of Day Summary administrative textual messages.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Last Participant ID	1	Char
Previous Close Price Date	4	Integer
Last Price	8	Long
High Price	8	Long
Low Price	8	Long
Total Volume	8	Long
Short Sale Restriction Indicator	1	Char
Primary Listing Market Participant ID	1	Char
Financial Status Indicator	1	Char
Number of Participants	1	Byte
<b>Total Length</b>	<b>53</b>	

#### 6.6.4 Participant End of Day Summary – Category S Type D

The Participant End of Day Summary messages are transmitted shortly before the ‘Goodnight’ messages. The Participant ID field of the Message Header is populated with ‘S’, signifying that the message is generated by the Consolidated Tape System. The Participant End of Day Summary message provides by security, the Participant Open, High, Low, Last, Volume and Tick information for CTA eligible securities, Local Issues and Bonds.

In cases where no trades qualify to update the **Last Price**, the previous close **Last Price** is provided and the **Previous Close Price Date** field is populated with the date associated with the **Last Price** value. If a trade qualifies to update the **Last Price**, the **Previous Price Close Date** field is set to zero. If there is no trading activity for a security for the day, a Participant End of Day Summary will not be generated for that security symbol. This message transmission is preceded by a Category ‘A’ Type ‘A’ Start of End of Day Summary and ended with a Category ‘A’ Type ‘B’ End of End of Day Summary administrative textual messages.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Participant ID	1	Char
Previous Close Price Date	4	Integer
Last Price	8	Long
High Price	8	Long
Low Price	8	Long
Open Price	8	Long
Total Volume	8	Long
Tick	1	Char
<b>Total Length</b>	<b>58</b>	

## 6.7 Trade Messages – Category T

Trade messages are used to report CTA eligible Equity, Local Issue or Bond information. Trade messages allow for automated corrections, cancellations or errors of trade reports (originally reported using fixed message formats), reporting Trading Halts, Resumes, Indications and Imbalances. The Trade Reporting Facility ID is restricted to CTA eligible Equity transactions. ‘Limit Up-Limit Down’ is not applicable to Local Issues or Bonds. ‘Limit Up-Limit Down’ Price Bands are republished every 30 seconds at clock time.

### 6.7.1 Auction Status – Category T Type A

The Auction Status message is used when a Participant in a CTA eligible security, Local Issue or a Bond requires Auction Information. Primary Listing Markets using an automated reopening will calculate Auction Collars, in compliance with rules around prices for re-opening, when applicable and will publish the Auction Status message. The initial Auction Collar will be published after the LULD Trading Pause. The ‘Number of Extensions’ field will reflect when a new Auction Status message has been published. The first Auction Collar extension, at the time of the LULD Trading Pause, will be set to zero (0) indicating the first Auction Status message and will increment by one (1) for each new Auction Status message sent during the LULD Trading Pause event.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Auction Collar Reference Price	8	Long
Auction Collar Upper Threshold Price	8	Long
Auction Collar Lower Threshold Price	8	Long
Number of Extensions	1	Byte
Short Sale Restriction Indicator	1	Char
Primary Listing Market Participant ID	1	Char
Financial Status Indicator	1	Char
<b>Reserved (for future use)</b>	<b>62</b>	<b>TBD</b>
<b>Total Length</b>	<b>102</b>	

## 6.7.2 Trade Correction – Category T Type C

The Trade Correction message is used to correct CTA eligible Equity, Local Issue or Bond information. The Participant Reference Number of Original Transaction Being Adjusted will reflect the Participant Reference Number of either the original trade, or, if the original trade has already been corrected, of the most recent correction to the trade. Included in the Trade Correction message is the current status of the Consolidated Last, High, Low, Volume, and Previous Close Price Date and the Participant's Open, High, Low, Last, Previous Close Price Date, Volume, and Tick at the time of the correction for the affected security. In instances when an issue trades only on one exchange for the day, both the Consolidated and the Participant summary information are identical. In cases where no trades qualify to update the Last Price, both the Previous Close Date and Previous Close Price fields are provided.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Corrected Sale Condition	4	Char [ ]
Corrected Trade Price	8	Long
Corrected Trade Volume	4	Integer
Corrected Seller's Sale Days	1	Byte

#### 6.7.4 Trading Status – Category T Type S

The Trading Status message is transmitted when a Participant in a CTA eligible security, Local Issue or a Bond elects to notify CTS of a Trading Halt, a Trading Resume, a Price Indication or a Market Imbalance. The Trading Status message is also used to identify the Limit Up-Limit Down action associated with a security (e.g., Price Bands, Limit State Entered or Limit State Exited).

## 6.7.6 Trade Cancel/Error – Category T Type X

The Trade Cancel/Error message is used cancel or error CTA eligible securities, Local Issues or Bond information (either to report the cancellation of a trade e.g., buyer and seller agrees to cancel a trade, or error a trade that never took place but was reported). The Participant Reference Number of Original Transaction Being Adjusted will reflect the Participant Reference Number of either the original trade, or, if the original trade has already been corrected, of the most recent correction to the trade. **Corrections are not applied to a cancelled or error trade. If a correction to a cancelled or error trade is required, the Participant will enter as a new trade.** Included in the Cancel/Error message is the current status of the Consolidated Last, High, Low, Volume, and Previous Close Price Date and the Participant's Open, High, Low, Last, Previous Close Price Date, Volume, and Tick at the time of the cancel/error. In instances when an issue trades only on one Exchange for the day, both the Consolidated and the Participant summary information are identical. In cases where no trades qualify to update the Last Price, the Previous Close Price is provided and the Previous Close Price Date field is populated.

Prior Day Trade Date and Time	8	2 x Integer (pair of Integers). Optional set to zero.  The first integer contains the number of seconds from Epoch 1/1/1970, 00:00:00 UTC. The next integer contains the nanosecond portion of the time (e.g., 972402315).  Represents the date and time the prior day trade was executed. In the Prior Day Correction messages, there are two Prior Day Trade Dates and Time, one to denote the date and time the original trade was executed as reported in a Prior Day Trade and one to denote the corrected date and time of trade execution. In the Prior Day Cancel/Error messages, the date and time denotes the reported execution date of the original trade being cancelled or reported in error.

## FIELD DESCRIPTIONS

### SALE CONDITION, *continued*

Deviations from a trade's qualification for the Open, Last, High and Low calculations both on a Consolidated and individual Participant basis are denoted with a number (i.e., **Notes #1, #2, #3 and #4**) in the above calculation chart and are described below:

#### ‘OPEN’, ‘LAST’, ‘HIGH’, ‘LOW’ CALCULATIONS

<b>Note 1</b>	<b>YES</b> , if it is the only qualifying last; <b>OR</b> If it is that Participant's first qualifying last; <b>OTHERWISE NO</b>
<b>Note 2</b>	<b>YES</b> , if it is the only qualifying last; <b>OTHERWISE NO</b>
<b>Note 3</b>	<b>YES</b> , if it is the only qualifying last; <b>OR</b> If it is from the same participant as the last; <b>OR</b> If it is from the LISTING MARKET for that Security; <b>OTHERWISE NO</b>
<b>Note 4</b>	<b>YES</b> , if it is the first qualifying or only qualifying trade of the day; <b>OTHERWISE <u>NO</u></b> .  (In instances of multiple Market Center Opening Trades, the latest trade takes precedence.)

In instances of multiple sale conditions, the following criteria will be used to determine the impact of the Sale Conditions on the Open, Last, High, and Low calculations both on a Consolidated and individual Participant basis:

#### **MULTIPLE SALE CONDITION ‘OPEN’, ‘LAST’, ‘HIGH’, ‘LOW’ CALCULATIONS**

- If all of the Sale Conditions indicate that the trade qualifies, it **will** be included in the calculations.
- If **any one or all** of the Sale Conditions indicate ‘**NO**’, the trade **does not qualify**, the ‘**NO**’ takes precedence and the trade **will not** be included in the calculations.
- If **all** of the Sale Conditions indicate that the trade qualifies, including a Sale Condition whose criteria deviates from a trade's qualification (i.e., above **Notes #1, #2, #3 and #4**) the trade qualifies, the ‘Note Criteria’ takes precedence and the trade **will** be included in the calculations.

**FIELD DESCRIPTIONS**

Field Name	Length	Description	
Sale Condition, <i>continued</i>	1 or 4	Char. or Char [4].  Denotes a particular condition applicable to the trade. The Short Trade format ‘Sale Condition Category’ field identifies the Category 1, 2, 3 or 4 level associated with a trade.	
The Multicast Output four (4) Char Sale Condition field is <b>Char specific</b> whereby a Sale Condition from Category 1 should be in the first Char position, a Sale Condition from Category 2 should be in the second Char position, a Sale Condition from Category 3 should be in the third Char position and a Sale Condition from Category 4 should be in the fourth Char position. If a Sale Condition is not required from any one of the categories, the unused Sale Condition Char should be space-filled. The Category hierarchy in the 4 Char Sale Condition field is currently as follows:			
Category 1	Category 2	Category 3	Category 4
Settlement Type	Reason for Trade-Through Exemption / Other Reason	Extended Hours / Sequence Type	SRO Trade Detail
<b>Space</b> (Regular Settlement)	<b>Space</b> (No Trade Through Exempt Reason)	<b>Space</b> (Not Extended Hours or Sold Out of Sequence)	<b>Space</b> (No SRO Required Trade Detail)
<b>C</b> Cash Trade (Same Day Clearing)	<b>F</b> Inter-market Sweep Order	<b>L</b> Sold Last (Late Reporting)	<b>B</b> Average Price Trade
<b>N</b> Next Day Trade (Next Day Clearing)	<b>O</b> Market Center Opening Trade	<b>T</b> Extended Hours Trade	<b>E</b> Automatic Execution
<b>R</b> Seller	<b>4</b> Derivatively Priced	<b>U</b> Extended Hours Sold (Out of Sequence)	<b>H</b> Price Variation Trade
	<b>5</b> Market Center Reopening Trade	<b>Z</b> Sold (Out of Sequence)	<b>I</b> Odd Lot Trade
	<b>6</b> Market Center Closing Trade		<b>K</b> Rule 127 (NYSE only) or Rule 155 (NYSE American only)
	<b>7</b> Qualified Contingent Trade		<b>M</b> Market Center Official Close
	<b>8</b> Reserved		<b>P</b> Prior Reference Price
	9 Corrected Consolidated Close Price as per Listing Market		<b>Q</b> Market Center Official Open
			<b>V</b> Contingent Trade
			<b>X</b> Cross / Periodic Auction Trade

## FIELD DESCRIPTIONS

### SALE CONDITION, *continued*

Reference below for the impact of the above sale conditions on the Consolidated High/Low/Last and Participant Open/High/Low/Last price calculations.

**Note 1:**

- Sale Conditions within the same category are mutually exclusive (e.g., Sale Conditions C, N or R cannot be used in combination).

**Note 2:**

- Sale Condition U (Extended Hours Sold – Out of Sequence) cannot be used in combination with any of the Sale Conditions listed in Category 2 – Reason for Trade-Through Exemption (Rule 611).

**Note 3:**

- Sale Conditions L (Sold Last – Late Reporting), O (Market Center Opening Trade), P (Prior Reference Price), and Z (Sold – Out of Sequence), are mutually exclusive of each other (i.e., these sale conditions cannot be used in combination).

MULTICAST OUTPUT BINARY SPECIFICATION

**APPENDIX C: GLOSSARY**

<b>Term</b>	<b>Description</b>
Automatic Execution	A sale condition code that identifies a NYSE trade that has been automatically executed without the potential benefit of price improvement.
Average Price Trade	A trade where the price reported is based upon an average of the prices for transactions in a security during all or any portion of the trading day.
Below Continuing Listing Standards	A financial status designation pertaining to Tape ‘A’ and Tape ‘B’ listed securities. The status identifies a company, whose issue has failed to meet established listings standards. The listing exchange will subsequently review the appropriateness of continuing to list the issue, and may decide to commence the process of delisting the issue.
Broken Lot	Indicates an irregular quantity or lot of securities, which is lower in terms of amount or quantity than the minimum lot quantity (for shares), or than the lot normally traded; less than 100 shares of a stock.
Cash Trade	A transaction which requires delivery of securities and payment on the same day the trade takes place.
Closing Price	The Participant Closing Price represents the last qualifying trade paid for a security by a Participant during the trading day.
Contingent Trade	A Sale Condition code used to identify a transaction where the execution of the transaction is contingent upon some event.
Corrected Consolidated Close Price as per Listing Market	A transaction executed by the Listing Market to establish the official Consolidated Last Price as indicated by the Listing Exchange.
Cross/ Periodic Auction Trade	Indicates that the trade resulted from a Market Center’s crossing session or auction trade.
Crossed Market	The transaction that constituted the trade-through was executed at a time when a protected Bid was priced higher than a protected offer in the security.

## APPENDIX C: GLOSSARY

Term	Description
Crossing Session I (NYSE American)	Single-sided orders and coupled (both buy and sell side) orders may be entered into Crossing Session I (called "After Hours Trading" on the NYSE American) between 4:15 p.m. and 5:00 p.m. (EST). Systemized limit orders entered during the normal 9:30 to 4 p.m. trading session labeled good-till-executed (GTX) migrate to the Crossing Session I for possible execution. There is a single NYSE American Crossing Session I trade at 5:00 p.m. at the price of the NYSE American closing price determined during the Exchange's 9:30 a.m. to 4:00 p.m. trading session. This trade is printed on the Consolidated Tape (Tape B). All coupled orders are executed in the trade. GTX and singled-sided orders are executed against each other (buys against sells) on a first-come-first-served basis. GTX orders, which are not executed, migrate back to the "book" for the next trading day. Single-sided orders, which are not executed, are cancelled. NYSE American Crossing Session I is exempt from "up-tick rule" for sell short orders. ETFs, which participate in NYSE American Crossing Session I, use the closing price at 4:15 p.m. See NYSE American Rules 1300 to 1306 for more details.
Crossing Session I (NYSE)	For the NYSE, Crossing Session I operates between 4:15 p.m. and 5:00 p.m. (EST). During this time, one-sided, two-sided, or good-till-executed (GTX) orders for a particular security can be entered for execution at 5:00 p.m. Matched orders are executed at the NYSE closing price determined during the Exchange's 9:30 a.m. to 4:00 p.m. trading session and are printed on the Consolidated Tape at approximately 6:40 p.m.
Crossing Session II (NYSE American)	NYSE American Crossing Session II (called "After Hours Trading Facility II" on the NYSE American) operates between 4:00 p.m. and 5:15 p.m. (EST). This session on the NYSE American accommodates the trading of NYSE American coupled orders in baskets, which are composed of at least 15 NYSE securities valued at \$1 million or more and also include NYSE American securities. Members, that have either facilitated a basket trade or have paired two customers' baskets, submit aggregate information on transactions in NYSE American securities included in the baskets to the NYSE American for execution. At 5:15 p.m., the aggregate information of all NYSE American securities included in baskets executed in this session prints to the Consolidated Tape (Tape B).
Crossing Session II (NYSE)	For the NYSE, Crossing Session II operates between 4:00 p.m. and 6:15 p.m. (EST). This session accommodates the trading of baskets of at least 15 NYSE securities valued at \$1 million or more. NYSE Members that have either facilitated a basket trade or have paired two customers' baskets can submit aggregate information to the Exchange for execution. At approximately 6:40 p.m., the aggregate information of all baskets executed in this session prints to the consolidated tape.

**APPENDIX C: GLOSSARY**

<b>Term</b>	<b>Description</b>
CTA Eligible Equity	Generally, any common stock, long-term warrant or preferred stock which becomes registered on any national securities exchange or is admitted to unlisted trading privileges thereon and which at the time of such registration or at the commencement of such trading substantially meets the original listing requirements of the NYSE or the NYSE American for such securities.
Derivatively Priced	The transaction that constituted the trade-through was the execution of an order at a price that was not based, directly or indirectly, on the quoted price of the security at the time of execution, and for which the material terms were not reasonably determinable at the time the commitment to execute the order was made (REG NMS 611b7).
Dollar Value	The whole and decimal portion, if any, of the total dollar worth of the total daily trade transactions.
Extended Hours Trade	Identifies a trade that was executed outside of regular primary market hours and is reported as an extended hours trade.
Extended Hours Sold (Out of Sequence)	Identifies a trade that takes place outside of regular market hours and is reported as an extended hours trade out of sequence and at a time different from the actual transaction time.
Indication	An approximation of what a security's opening or reopening price range (Bid and Offer prices, no sizes) will be when trading resumes after a delayed opening or after a trading halt.
Inter-Market Sweep Order	The transaction that constituted the trade-through was the execution of an order identified as an Inter-market Sweep Order.

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

**APPENDIX C: GLOSSARY**

<b>Term</b>	<b>Description</b>
Late Filing	A financial status designation pertaining to Tape ‘A’ and Tape ‘B’ issues (i.e. issues listed on the NYSE, the NYSE American or on one of the Regional exchanges). The status identifies a company, which has failed to meet established listings standards for filing its annual reports.
Limit State	Indicates that a National Best Bid is equal to the Upper Limit Price Band, or that a National Best Offer is equal to the Lower Limit Price Band.
Limit Up-Limit Down (LULD) Price Bands	<p>The Limit Up-Limit Down Price Band represents a price range which is set at a percentage level above and below the average price of a security over the immediately preceding five (5) minute period. Price Bands prevail for a minimum of thirty (30) seconds. During a Limit State Price Bands will not be disseminated and will recommence when Limit State is terminated.</p> <p>For further details related to Limit Up-Limit Down, reference the following:  <a href="http://www.sec.gov/rules/sro/nms/2012/34-67091.pdf">http://www.sec.gov/rules/sro/nms/2012/34-67091.pdf</a></p>
Limit Up-Limit Down (LULD) Quote Mid-Point	Indicates a listing exchange’s midpoint of a quote when the listing exchange opens (reopens) with a quote instead of opening (reopening) with a trade.
Limit Up-Limit Down (LULD) Trading Pause	Denotes a five-minute regulatory trading halt (pause) for an individual security that does not exit a Limit State within 15 seconds.
Local Issue	A Local Issue is an issue that does not meet NYSE American Stock Market or NYSE listing requirements (is not CTA eligible) but is traded at one or more Regional Exchanges. Local Issues are included in the CTS database.
Market Center Closing Trade	The transaction that constituted the trade-through was a single priced closing transaction by the Market Center (REG NMS Rule 611b3).
Market Center Official Close	Indicates the ‘Official’ closing value as determined by a Market Center. This transaction report will contain the market center generated closing price.
Market Center Official Open	Indicates the ‘Official’ opening value as determined by a Market Center. This transaction report will contain the market center generated opening price.

### APPENDIX C: GLOSSARY

Term	Description
Market Center Opening Trade	The trade that constituted the trade-through was a single priced opening transaction by the Market Center (REG NMS Rule 611b3).
Market Center Reopening Trade	The trade that constituted the trade-through was a single priced reopening transaction by the Market Center (REG NMS Rule 611b3).
Market Imbalance Buy	A 50,000 share or more excess of market orders to buy over market orders to sell as of 9:00 a.m. on expiration days.
Market Imbalance Sell	A 50,000 share or more, excess of market orders to sell over market orders to buy as of 9:00 a.m. on expiration days.
Market On Close (MOC) Imbalance Buy	An excess of 50,000 shares or more of MOC orders to buy over MOC orders to sell (including MOC sell plus and MOC sell short orders).
Market On Close (MOC) Imbalance Sell	An excess of 50,000 shares or more of MOC orders to sell (not including MOC sell short and MOC sell plus orders) over MOC orders to buy (including MOC orders to buy minus).
Market-Wide Circuit Breaker Level 1 – 7% Breached	<p>This regulatory Trading Halt is used to denote that trading is suspended due to the S&amp;P 500 Index reaching a 7% decline level below its closing value on the previous trading day. A Level 1 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows:</p> <ul style="list-style-type: none"> <li>• Before 3:25 p.m. ET – duration 15 minutes</li> <li>• At or after 3:25 p.m. ET – trading shall continue unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.</li> </ul>
Market-Wide Circuit Breaker Level 2 – 13% Breached	<p>This regulatory Trading Halt is used to denote that trading is suspended due to the S&amp;P 500 Index reaching a 13% decline level below its closing value on the previous trading day. A Level 2 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows:</p> <ul style="list-style-type: none"> <li>• Before 3:25 p.m. ET – duration 15 minutes</li> <li>• At or after 3:25 p.m. ET – trading shall continue unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.</li> </ul>

CONSOLIDATED TAPE SYSTEM (CTS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

**APPENDIX C: GLOSSARY**

<b>Term</b>	<b>Description</b>
Market-Wide Circuit Breaker Level 3 – 20% Breached	This regulatory Trading Halt is used to denote that trading is suspended due to the S&P 500 Index reaching a 20% decline level below its closing value on the previous trading day. A Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: At any time during regular trading hours, trading shall Halt and not Resume for the remainder of the trading day.
Mixed Lot	An order for a number of shares greater than 100 (e.g., 142, 373, 1, 948 etc.), but not a multiple of 100. This type of order is also known as ‘PRL’ or ‘partial round lot’ order and is comprised of a round lot order and an odd lot order.
Next Day Trade	A transaction that requires the delivery of securities on the first business day following the trade date.
No Market Imbalance	Indicates that the imbalance of market orders for a security is less than 50,000 shares as of 9:00 a.m. on expiration day.
No Market on Close (MOC) Imbalance	The difference between the number of shares to buy MOC and the number of shares to sell MOC is less than 50,000.
Non-Regulatory Halt or Delay	An operational Trading Halt for a Participant due to Order Imbalance or Operational.
Not-Regular Way	The transaction that constituted the trade-through was not a ‘regular way’ contract.

### APPENDIX C: GLOSSARY

Term	Description
Odd Lot	An order amount for a security that is less than the normal unit of trading for that particular asset. Odd lots are considered to be anything <i>less than</i> the standard units of trade of 1, 10 or 100 shares.
One or Two Point Rule	<p>A trade must receive Floor Official approval and be published on the tape as ‘opened’ or ‘sold last’ if it is:</p> <ul style="list-style-type: none"> <li>• one point or more away from the last sale when the last sale is under \$20.00; <b>or</b></li> <li>• two points or more away from the last sale when the last sale is \$20.00 or more</li> </ul>
Opening/Reopening Trade Detail	An Opening/Reopening Trade Detail report indicates the trade was included as part of an opening or reopening transaction previously reported by a Participant on an aggregate basis.
Operational	Denotes a non-regulatory Trading Halt. The ability to trade a security by a Participant is temporarily inhibited due to technical reasons.
Order Imbalance	Denotes a non-regulatory halt condition where there is a significant imbalance of buy or sell orders.
Price Indication	Reflects an approximate price range of what a security's trading range (Bid and Offer prices) will be when trading resumes after a Trading Halt.
Price Variation Trade	Indicates a regular market session trade transaction that carries a price that is significantly away from the prevailing consolidated or primary market value at the time of the transaction.
Prior Reference Price	A sale condition that identifies a trade based on a price at a prior point in time, i.e., more than 90 seconds prior to the time of the trade report. The execution time of the trade will be the time of the prior reference price.
Qualified Contingent Trade	A transaction consisting of two or more component orders executed as agent or principal where the execution of one component is contingent upon the execution of all other components at or near the same time and the price is determined by the relationship between the component orders and not the current market price for the security.
Regular Sale	A trade made without stated conditions is deemed regular way for settlement on the third business day following the transaction date.

### APPENDIX C: GLOSSARY

Term	Description
Regulatory Halt - Additional Information Requested	Denotes a regulatory trading halt when the primary market has requested additional information from the issuer of the security. Trading is suspended until the primary market has received and reviewed the requested information.
Regulatory Halt - Corporate Action	Denotes a regulatory trading halt when the primary market determines a halt is necessary pending the outcome of a Corporate Action event. Trading is suspended until the results of the Corporate Action are confirmed and the security is suitable for trading.
Regulatory Halt - ETF Component Prices Not Available	Denotes a regulatory trading halt when a significant percentage of an ETF's weight is invested in components in which pricing is not available. Trading is suspended until the primary market determines that such condition no longer exists.
Regulatory Halt - Intraday Indicative Value Not Available	Denotes a regulatory trading halt when the Intraday Indicative Value of an ETF is not being disseminated or is being disseminated incorrectly. Trading is suspended until the primary market determines that such condition no longer exists.
Regulatory Halt - Merger Effective	Denotes a regulatory trading halt in connection with a security being suspended in connection with a merger. Trading is suspended indefinitely.
Regulatory Halt - New Security Offering	Denotes a regulatory trading halt in connection with a new security offering. Trading is suspended until the new security is admitted to trading on the primary listing exchange during the primary trading session.
Regulatory Halt - News Pending	Denotes a regulatory Trading Halt due to an expected news announcement, which may influence the security. A Trading Halt may be continued once the news has been disseminated.
Regulatory Halt - News Released	Denotes a regulatory trading halt when relevant news influencing the security is being disseminated. Trading is suspended until the primary market determines that an adequate time has passed to allow for full dissemination of the news into the market.
Regulatory Halt - Regulatory Concern	Denotes a regulatory trading halt due to an ongoing regulatory concern regarding the suitability of trading in a security. Trading is suspended until the primary market determines the security is suitable for trading.

**APPENDIX C: GLOSSARY**

<b>Term</b>	<b>Description</b>
Resume	Indicates that trading for a Participant is no longer suspended in a security which had been Halted.
Round Lot	Typically 100 shares of stock or any number of shares that is a multiple of 100 (i.e., 100, 600, 1,600, etc.).
Rule 127 Trade (NYSE)	To qualify as a NYSE Rule 127 the trade is executed outside the present quote and meets one or both of the following conditions: <ol style="list-style-type: none"><li>1. has a volume of 10,000 shares or more <b>and/or</b></li><li>2. has a dollar value of \$200,000 or more.</li></ol>
Rule 155 Trade (NYSE American)	To qualify as a NYSE American Rule 155, from time to time, a specialist may arrange for the sale, or purchase, of a block of security, or other large number of shares of securities, at a single “clean-up” price. Generally such a sale or purchase is outside of the current market. Such sale or trade is designated as a Rule 155 trade.
Self Help	The transaction that constituted the trade-through was effected when the market center displaying the protected quotation that was traded through was experiencing a failure, material delay or malfunction of its systems or equipment.
Seller	A Seller’s Option transaction gives the seller the right to deliver the security at any time within a specific period, ranging from not less than two calendar days, to not more than sixty calendar days. A security offered “Seller’s Option” may command a lesser price than if offered “Regular Way”.
Short Sale Restriction	A restriction designed to control short selling from further driving down the price of a security any day in which the price declines by 10% or more from the previous day’s closing price. Once the Short Sale Restriction is activated, a Short Sale Restriction would be in effect in that security for the remainder of the day as well as the following day, unless deactivated.

## APPENDIX C: GLOSSARY

Term	Description
Single-Priced Opening	The transaction that constituted the trade-through was a single-priced opening transaction by the market center.
Single-Priced Reopening	The transaction that constituted the trade-through was a single-priced reopening transaction by the market center.
Single-Priced Closing	The transaction that constituted the trade-through was a single-priced closing transaction by the market center.
Sold	Sold is used when a trade is printed (reported) out of sequence and at a time different from the actual transaction time.
Sold Last	Sold Last is used when a trade prints in sequence but is reported late or printed in conformance to the One or Two Point Rule.
Stock-Option Trade	Stock-Option Trade is used to identify cash equity transactions which are related to options transactions and therefore potentially subject to cancellation if market conditions of the options leg(s) prevent the execution of the stock-option order at the price agreed upon.
Stopped Stock	The transaction that constituted the trade-through was the execution by a trading center of an order for which, at the time of receipt of the order, the trading center had guaranteed an execution at no worse than a specified price (a “stopped order”), where: (i) The stopped order was for the account of a customer;(ii) The customer agreed to the specified price on an order-by-order basis; and (iii) The price of the trade-through transaction was for a stopped buy order lower than the National Best Bid in the security at the time of execution, or for a stopped sell order higher than the National Best Offer in the security at the time of execution.
Sub-Penny Trading	Indicates a non-regulatory Trading Halt for an NYSE security whose price may fall below \$1.05, possibly leading to a sub-penny execution.
Trading Halt	A temporary halt in the trading of a particular security by a Participant.
Trading Range Indication	Denotes the probable trading range (Bid and Offer prices, no sizes) of a security that is <u>not</u> Trading Halted. The Trading Range Indication is used prior to or after the opening of a security.

20:05	MARKET CLOSED
20:05	End of Day – Control Message

**Afterhours Test Data Dissemination:**

**Note:**

- CTS Multicast Data Recipients are reminded that test data dissemination over CTS multicast data feeds can commence as early as **8:30 P.M. ET** and terminate as late as **11:00 P.M. ET** during business weekdays and any time during Saturdays, Sundays and Market holidays. This test period is accommodated to allow testing opportunities for Participants and Data Recipients, as well as to provide test time to rectify any production problems that may have occurred the prior business day. Multicast data feed recipients should take the necessary precautions to protect their systems against any adverse impact (e.g., database corruption) if processing data throughout the test dissemination period. During the test period, note that test data can be disseminated over all CTS multicast channels (e.g., Production, Retransmission or Playback Test Group IP addresses).
