## **1.0 INTRODUCTION**

The Securities Industry Automation Corporation (SIAC) serves as the Processor for the Consolidated Quote Plan from its inception on August 1, 1978. In fulfilling its role as the Processor, SIAC plans, develops, operates, and maintains the Consolidated Quotation System (CQS).

### **1.1 Background**

CQS receives transactions generated by participating U.S. Stock Exchanges and the FINRA Alternative Display Facility (ADF). In addition, CQS calculates the National ‘Best Bid and Best Offer’ (NBBO) and identifies the FINRA ‘Best Bid and Best Offer’ (FBBO).

CQS consolidates transactions that occurred on participating U.S. Stock Exchanges and the FINRA Alternative Display Facility (ADF) and disseminates this information via computer-to-computer linkages to the financial community in the U.S. and abroad.

Essential in ensuring the timely reporting of quote information are the CQS IP Multicast data streams. CQS has a unique set of IP Multicast addresses assigned to each of its data “lines”. Data generated by each participating Exchange and the FINRA Alternative Display Facility (ADF) is assembled in prescribed message formats and transmitted to the appropriate TCP/IP Processor address via the Participants’ private communications facility. As each message is received, it is merged with messages received from all Participants, and the consolidated message stream is transmitted simultaneously to all Data Recipients via their private communications facilities. Approved Data Recipients of the CQS service can redistribute CQS data worldwide to their customers as part of their individual services or use the data for their own purposes.

**Note:**

- It is recommended that Data Recipients subscribe to both the Consolidated Quotation System (CQS) and the Consolidated Tape System (CTS) in order to receive complete listed equity market data. Reference the CQS and CTS Specifications for further details at: [www.ctaplan.com](http://www.ctaplan.com).

### **1.2 Dual Site Redundancy**

Computer systems that support the processing and dissemination of quote transactions are operational at primary and backup sites. The backup site provides recovery capability in the event of a disaster at the primary site. Through computerized communications equipment, CQS transaction data is disseminated from either the primary or backup site. The dual-site configuration provides system fold-over for a limited site disaster (system failure) or full site disaster (loss of facility).

In the event of a Primary Data Center failover to the Disaster Recovery site (Backup Data Center), data will be sourced via the Backup Data Center source addresses.

## **1.3 Failure Recovery**

### **1.3.1 NMS Publication Process Failure Recovery**

- In the event the Primary publication process encounters an unexpected state, data publication automatically switches to the Secondary publication process on the Primary Data Center
  - Data Subscribers may observe gaps on the affected output multicast lines. Any such gaps can be requested for retransmission
- In the event where both the Primary and Secondary publication processes encounter an unexpected state at the same time on the Primary Data Center, Pillar CTA initiates an automatic restart for both the processes in a recovery mode
  - There is no impact to the input Data Participants
  - Data publication is paused for the affected output line(s) and any input messages received while the process is being restarted are queued and published once the processes recover
  - Upon recovery, output block sequence for the affected line(s) is reset to a higher Block Sequence number. System transmits the Reset Block Sequence Number (Category C Type L) message and resumes data publication.
  - Security Symbol state including the LULD Price Bands and the NBBO state are recovered from prior to failure.
  - All Messages for the day can be requested for retransmission, including those that were received prior to, or, while the processes were being restarted.

### **1.3.2 Input Gateway Failure and Recovery**

- In the event the Primary input Gateway connection encounters an unexpected state, Input Participants can reconnect to the Secondary (backup) input connection
- In the event the Input Gateway encounters an unexpected state affecting both the Primary and Secondary Input Connections for all the Data Participants, a restart of the Input Gateway can be initiated on the Primary Data Center.
  - Both Primary and Secondary Input connections are temporarily unavailable, affecting all Participants and Data Subscribers from inputting any data or requesting any retransmissions
  - Zero Quotes (Quote messages with Zero Price and Size) are published on the output lines on behalf of all participants across all symbols
  - Upon recovery, Input Block Sequence Number and PRN are recovered for each input line. Data Participants can reestablish connection and start submitting data. Data publication resumes.
  - There is no loss of data, all messages can be requested for retransmission.

### **1.3.3 Primary Data Center Failure Recovery**

In the event that the Primary Data Center becomes unavailable, failover to the Disaster Recovery site (Backup Data Center) is initiated. However, if the DR site is also unavailable, then a Session Cold Restart on the Primary Data Center can be performed.

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

In case of a Session Cold Restart on the Primary Data Center:

- Both Primary and Secondary Input connections are temporarily unavailable, affecting all Participants and Data Subscribers from inputting any data or requesting any retransmissions
- Upon restart:
  - Output block sequence for all the lines is reset to a higher Block Sequence number and System transmits the Reset Block Sequence Number (Category C Type L) message
  - Security symbol state including the LULD Price Bands is recovered. However, NBBO is not persisted.
  - Zero Quotes (Quote messages with Zero Price and Size) are published on behalf of all participants across all symbols
  - Input Lines are enabled and Data Publication Resumes
  - Messages prior to the Restart cannot be requested for Retransmission

## 1.4 Scope

This specification defines the interface and message format requirements for recipients of the CQS data feed via connectivity to the National Market System (NMS) IP Multicast distribution network.

## 1.5 Data Feed Reference Material

### Technical Specifications

For Technical Specifications visit [www.ctaplan.com](http://www.ctaplan.com) - and select Tech Specs tab for the following:

- CQS Multicast Output Specification
- CTS Multicast Output Specification
- Common IP Multicast Distribution Network Specification
- Automated Retransmission Facility User Guide

### Consolidated Tape Association (CTA) Announcements

CTA Announcements including feed enhancements, traffic rates, etc. visit [www.ctaplan.com](http://www.ctaplan.com)

### Future Data Feed Enhancements

Future enhancements and/or modifications may require system changes for your firm. Please refer to the CTA Plan website [www.ctaplan.com](http://www.ctaplan.com) to obtain the latest CTA Notifications and Technical Specification documents. **To automatically receive these Notifications and System Alerts, subscribe at:** <https://www.ctaplan.com/subscribe>

### Data Feed Related Resources

For customers selecting to initiate ICE Global Network (IGN), formerly known as the Secure Financial Transaction Infrastructure (SFTI), connections to CQS:

- Submit a request at: <https://www.theice.com/contact-us/connectivity>
- Contact IGN Sales at: [clientnetworks@theice.com](mailto:clientnetworks@theice.com)
- For more information on IGN, including documentation such as Customer and Technical guides reach out to an IGN representative at: [iceglobalnetwork-info@theice.com](mailto:iceglobalnetwork-info@theice.com)

## **2.0 GENERAL DESIGN OF DATA DISTRIBUTION NETWORK**

The NMS IP Multicast distribution network disseminates all market data information in the form of multicast addressed IP datagrams.

Data available via the NMS IP Multicast distribution network includes:

### **CQS Real-Time Production Data**

A copy of each CQS real-time production message is available from SIAC's production/primary site. These redundant copies are delivered via two distinct multicast data streams.

### **CQS Real-Time Retransmission Data**

The retransmission data streams are available from SIAC's production/primary site, and are delivered via two redundant retransmission multicast data streams.

### **CQS After-Hours Playback Data**

There is a separate IP Multicast data feed dedicated for after-hours playback test data. The playback data is made available via a single set of multicast data feeds.

### **IP Multicast Network Interface**

The requirements for the NMS IP Multicast distribution network interface are defined in the document, 'Common IP Multicast Distribution Network Recipient Interface Specification' which can be accessed at website: <http://www.ctaplan.com> and select the Tech Specs tab.

### 3.0 TRANSMISSION CHARACTERISTICS

#### 3.1 Transmission Block

Encapsulated within each IP packet is a single transmission Block. One type of transmission Block is used for all types of messages. A Block can have a maximum of 1,000 bytes inclusive of Block Header, Block Data, and Block Pad Byte.

Block Structure	Length
Block Header	20
Block Data	Variable
Block Pad Byte (optional)	1

#### 3.2 Block Data

The Block Data consists of one or more CQS messages.

A message consists of a Message Header, which is of fixed length and format and Message Data (Body), which is variable in length and format. Category C – Control messages are each sent in their own individual block.

The Block Data structure is as follows:

Block Data Structure
Message 1 Data
Message 2 Data
~~~
Message N Data

#### 3.3 Block Pad Byte

**Byte.** Unsigned integer contains binary zero (Hex 0x00). Only used when the size of a block consists of an odd number of bytes. In instances of odd number of bytes, the Block Pad Byte is added to the Block to ensure the Block is an even number of bytes.

### 3.4 Data Type

The following data types are used by CQS:

Type	Value
<b>NUMERIC – Big-Endian (Network Byte Order)</b>	
byte	Big-Endian Unsigned 1 Byte Integer
short	Big-Endian Unsigned 2 Byte Integer
integer	Big-Endian Unsigned 4 Byte Integer
long	Big-Endian Unsigned 8 Byte Integer
<b>ALPHA/ALPHANUMERIC/SPECIAL/PRINTABLE</b>	
char	Single printable ASCII character
char[ ]	Fixed length printable ASCII characters
varchar [ ]	Variable lengths printable ASCII characters

#### 3.4.1 Numeric Types

1. All numeric fields will be in Big-Endian (Network Byte Order) format
2. Numeric types (byte, short, integer and long) represent sequence numbers, timestamps, prices and sizes
3. Prices represented by short fields have implied 2 decimal places
4. Prices represented by long fields have implied 6 decimal places
5. Any numeric value that is unused or does not apply to a given message type has a value set to 0

The maximum range values for the numeric fields are as follows:

1 byte unsigned integer: 0 – 255 (byte)  
2 byte unsigned integer: 0 – 65,535 (short)  
4 byte unsigned integer: 0 – 4,294,967,295 (integer)  
8 byte unsigned integer: 0 – 18,446,744,073,709,551,615 (long)

Select values represented as 2's complement, will have signed integers with the following range:

8 byte signed integer: -9,223,372,036,854,775,808 to +9,223,372,036,854,775,807 (signed long)

#### 3.4.2 Alpha/Alphanumeric/Special/Printable Types

1. ASCII printable character codes 32 – 126
2. Left justified and padded on the right with spaces for fixed length fields

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

### 3.5 Block Header

Field	Length	Type
Version	1	Byte
Block Size	2	Short
Data Feed Indicator	1	Char
Retransmission Indicator	1	Char
Block Sequence Number	4	Integer
Messages In Block	1	Byte
SIP Block Timestamp	8	2 x Integer
Block Checksum	2	Short
<b>Total Length</b>	<b>20</b>	

#### 3.5.1 Version

**Byte.** Indicates the CQS binary protocol version and allows for Block Header, Message Header and Message formats to be updated while still supporting previous versions of headers/message formats during transition. Version value is set to 2 for first/initial version for CTA Pillar SIP.

#### 3.5.2 Block Size

**Short.** Indicate size in bytes of the entire transmission block.

### 3.5.3 Block Sequence Number

**Integer.** The Block Sequence Number denotes the sequence number of the first message in the block. If a Block contains more than one message, any messages following the first message are implicitly numbered sequentially. As such, the Block Sequence Number in the next Block is incremented by the number of messages published in the previous Block.

Block Sequence Number rollover occurs after 4,294,967,295. On a per multicast line basis, the Block Sequence Number on the multicast lines are set to zero at the start of each day, and incremented each time a block is transmitted, with the following exceptions:

1. The Block Sequence Number in retransmitted blocks contains the Message Sequence Number of the first message in the retransmitted Block
2. The Block Sequence Number field in the Block Header of a Category C Type L message (Reset Block Sequence Number) contains the number to which the Block Sequence Number counter is to be reset. This number is either one (1) in the event the sequence number rolls over from 4,294,967,295 or a number greater than the highest number previously transmitted.
3. The block containing a Category C Type A message (Start of Day) or Category C Type Z message (End of Day) contains the block sequence number one higher than the last transmitted message block.
4. The block containing a Category C Type T (Line Integrity) message contains the message sequence number of the last block transmitted, which was not a retransmitted block.
5. Should CQS experience a line failure and recovery, the Block Sequence number for the recovered multicast line(s) can be reset to a number greater than the last message sequence number transmitted once message transmission is resumed.

### 3.5.4 Messages in Block

**Byte.** The number of messages contained in the transmission block.

### 3.5.5 Block Checksum

**Short.** Lower 2 bytes of the 4 byte sum of all the bytes in the block, excluding this Block Checksum field.

### 3.5.6 Data Feed Indicator

**Char.** Value is 'Q' for Consolidated Quotation System (CQS).

### 3.5.7 Retransmission Indicator

**Char.** Contains either a ‘O’ (indicating an original message) or ‘V’ (indicating a retransmitted block).

### 3.5.8 SIP Block Timestamp

**2 x Integer (pair of integers).** Contains the block timestamp and is the SIP time that processing a block of messages is completed. The first integer contains the number of seconds from Epoch 1/1/1970, 00:00:00 UTC. The next integer contains the nanosecond portion of the time (e.g., 972402315).

Precision Time Protocol (PTP) is utilized to provide a standard method to synchronize devices on a network with sub-microsecond precision. The protocol synchronizes slave clocks to a master clock ensuring that events and timestamps in all devices use the same time base.

SIAC recommends to represent this time in HH:MM:SS.mmmµµnnn format Eastern Time (ET) when communicating with SIAC.

For Retransmissions, the SIP Block Timestamp contains the timestamp representing when the first message in the retransmitted block was originally processed by SIP.

### 3.6 Retransmission Capability

CQS stores all data transmitted to the Data Recipients for a single trading day to facilitate data retransmission. If Data Recipients do not receive a block(s), a retransmission of the missed messages can be requested. Retransmission requests are accepted in the period following transmission of the Start of Day message and before the transmission of the End of Day message.

The following Message Category and Types are not included in retransmissions:

Message Category	Message Type	Description
C	A	Start of Day
C	T	Line Integrity

The Automated Retransmission Facility is utilized for automatically receiving and processing CQS block retransmission requests.

A Data Recipient may request automated retransmission(s) of missed messages by connecting directly through IGN, formerly known as SFTI, to the Automated Retransmission Facility via TCP/IP addresses and ports. A Data Recipient is required to enter their assigned user ID and password along with system, line, and message sequence number information. The requested message(s) are re-published over the dedicated Retransmission multicast streams. An **‘Automated Retransmission Facility User Guide’** for automated retransmission requests can be accessed at the following website: <http://www.ctaplan.com> and select the Technical Specs tab.

All retransmitted CQS blocks contain only ‘V’ in the Retransmission Indicator field of the Block Header. The Block Sequence Number field in the Block Header of each retransmitted block contains the Message Sequence Number of the first message in the retransmitted block.

**Note:**

- It is the responsibility of the Data Recipient to ignore retransmitted messages not requested by them.

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

## 4.0 MESSAGE HEADER

The Message Header uniquely identifies the Category and Type of each message within a Block. The Message Header can represent an entire message or appears before the Message Body segment in each message transmitted. The Message Header contains the following bytes and conforms in all cases to the following data fields:

Field	Length	Type
Message Length	2	Short
Message Category	1	Char
Message Type	1	Char
Participant ID	1	Char
Timestamp 1	8	2 x Integer
Message ID	1	Byte
Transaction ID	4	Integer
Participant Reference Number	8	Signed Long
<b>Total Length</b>	<b>26</b>	

### 4.1 Message Length

**Short.** The Message Length identifies the total message length inclusive of the Message Header and Message Body.

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

## 4.2 Message Category and Message Type Table

Message Category	Message Type	Value
<b>Control</b>		
C	A	Start of Day
C	C	FINRA Close
C	L	Reset Block Sequence Number
C	O	FINRA Open
C	P	Disaster Recovery Data Center Activation
C	T	Line Integrity
C	Z	End of Day
<b>Market Status</b>		
M	K	Market-Wide Circuit Breaker Decline Level Status
M	L	Market-Wide Circuit Breaker Status
<b>Quote</b>		
Q	A	Auction Status
Q	L	Long Quote
Q	Q	Short Quote
Q	S	Special Long Quote (FINRA ADF) with FBBO Information

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

#### 4.2.1 Message Category

**Char.** The Message Category represents the message classification. Refer to Message Category and Message Type Table *section 4.2*.

#### 4.2.2 Message Type

**Char.** The Message Type together with the Message Category identifies the message. Refer to Message Category and Message Type Table *section 4.2*.

#### 4.3 Participant ID

**Char.** Participant ID identifies the Participant or Processor that generated the message.

Code	Value
A	NYSE American, LLC (NYSE American)
B	NASDAQ OMX BX, Inc. (NASDAQ OMX BX)
C	NYSE National, Inc. (NYSE National)
D	FINRA Alternative Display Facility (ADF)
H	MIAX Pearl Exchange, LLC (MIAX)
I	International Securities Exchange, LLC (ISE)
J	Cboe EDGA Exchange, Inc. (Cboe EDGA)
K	Cboe EDGX Exchange, Inc. (Cboe EDGX)
L	Long-Term Stock Exchange, Inc. (LTSE)
M	NYSE Chicago, Inc. (NYSE Chicago)
N	New York Stock Exchange, LLC (NYSE)
P	NYSE Arca, Inc. (NYSE Arca)
S	Consolidated Quotation System
T	NASDAQ Stock Market, LLC (NASDAQ)
U	Members Exchange, LLC (MEMX)
V	Investors' Exchange, LLC. (IEX)
W	CBOE Stock Exchange, Inc. (CBSX)
X	NASDAQ OMX PSX, Inc. (NASDAQ OMX PSX)
Y	Cboe BYX Exchange, Inc. (Cboe BYX)
Z	Cboe BZX Exchange, Inc. (Cboe BZX)

#### 4.4 Timestamp 1

**2 x Integer (pair of integers).** Timestamp 1 is a Participant-provided timestamp. The first integer contains the number of seconds from Epoch 1/1/1970, 00:00:00 UTC. The next integer contains the nanosecond portion of the time (e.g., 972402315). For any messages generated by CQS, e.g., Messages generated on behalf of a Participant, Price Band messages, Control messages and Market Status messages, the Timestamp 1 field will be set to current SIP time.

- **If from an Exchange: Timestamp 1** denotes the time where the quote bid price and/or the offer price for a security is designated with an Exchange's Matching Engine Publication timestamp. Exchanges use a clock sync methodology ensuring that timestamps are accurate within tolerances of 100 microseconds or less. Exchanges shall provide the timestamp in terms of nanoseconds since Epoch.
- **If from the FINRA Alternative Display Facility (ADF): Timestamp 1** denotes the time of the quote bid price and/or the offer price for a security that a FINRA member reports to the FINRA Alternative Display Facility. FINRA shall provide such times to the Processor in nanoseconds since Epoch.

#### 4.5 Participant Reference Number

**Signed Long.** Set to Zero. Participant Reference Number is a pass-thru of the inbound Participant Reference number assigned to a transaction. Zero, positive and negative Participant Reference Numbers will be sent.

#### 4.6 Message ID

**Byte.** The Message ID identifies the individual message within the block beginning with number one (1).

#### 4.7 Transaction ID

**Integer.** The Transaction ID will be populated by CQS and is **Reserved for Internal Use** only.

**Note:**

- Data Recipients should ignore/disregard this field to the extent that it does not impact their normal data processing.

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

## 5.0 MESSAGE ROUTING

In total, CQS messages are disseminated over **twenty-four (24)** IP multicast lines designated as:

1. Line 1 (**L1**) through Line 12 (**L12**) for Network 'A', (NYSE listed securities)
2. Line 1 (**L1**) though Line 12 (**L12**) for Network 'B' (Cboe BZX, NYSE ARCA and NYSE American listed securities)'.

Note: The 'Primary Listing Market Participant ID' field will explicitly identify the Listing Market associated with their listed security.

Messages will be routed over the twenty-four IP multicast lines according to the network and security symbol range distribution except the following:

1. Control (Category C) messages are distributed over all Network 'A' and Network 'B' lines.

Traffic for CQS Network 'A' and Network 'B' messages will be routed by network and security symbol to twenty-four (24) assigned multicast lines as follows:

CQS NETWORK 'A' Symbol Range Distribution			CQS NETWORK 'B' Symbol Range Distribution		
Multicast Lines	From	To	Multicast Lines	From	To
1	A	ANZZZZ	1	A	DZZZZZ
2	AO	BXZZZZ	2	E	EWZZZZ
3	BY	CRZZZZ	3	EX	GZZZZZ
4	CS	ELZZZZ	4	H	IWEZZZ
5	EM	GLZZZZ	5	IWF	KZZZZZ
6	GM	IQZZZZ	6	KJ	RMZZZZ
7	IR	LVZZZZ	7	RN	SKZZZZ
8	LW	NOZZZZ	8	SL	SPZZZZ
9	NP	PRZZZZ	9	SQ	UMZZZZ
10	PS	STZZZZ	10	UN	VNZZZZ
11	SU	USZZZZ	11	VO	XLEZZZ
12	UT	ZZZZZZ	12	XLF	ZZZZZZ

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

---

**Message Routing:** *continued*

**Test Messages:**

- CQS messages containing dedicated ‘Test Symbols’ for Listing Exchange NYSE will route to multicast lines for Network ‘A’ according to the network and security symbol range distribution.
- CQS messages containing dedicated ‘Test Symbols’ for Listing Exchanges Cboe BZX, IEX, NYSE ARCA and NYSE American will route to multicast lines for Network ‘B’ according to the network and security symbol range distribution.
- Dedicated ‘Test Symbols’ and their associated listing exchange are listed in the Field Descriptions section under the ‘Security Symbol’ field.

**Note:**

- Data Recipients are responsible for handling any symbol over any line. Redistribution of traffic may not occur intraday. Notification may not be sent to the Data Recipients regarding redistribution of traffic.

## 6.0 MESSAGE FORMATS

The Message Category and Message Type identify the Message and determine the format of the body. Each message transmitted by CQS consists of a Message Header and Message Body or Message Header only.

All messages formats have fixed field which is determined by reading the Message Header and Message Body.

A field description is provided as part of the Block Header format, Message Header format, Message Body or in the **Field Descriptions** section of this document.

## **6.2 Control Messages – Category C**

Control messages consist of the standard **Message Header only**, and are **not** blocked with any other messages including Control messages.

When included in a retransmission sequence, the Retransmission Indicator field of a Control message contains code ‘V’; otherwise this field contains the alphabetic upper case character ‘O’ (meaning original message).

### **6.2.1 Start of Day – Category C Type A**

The Start of Day message signals the start of normal data dissemination over the multicast lines. A single Start of Day message is sent with the Block Sequence Number field set to zero.

### **6.2.2 FINRA Close – Category C Type C**

The FINRA Close message is transmitted by FINRA to CQS to indicate the Close state of FINRA Market Maker(s). All FINRA Market Maker quotes must be in either an Open or Close state where Open implies current and Close implies not current.

### **6.2.3 Reset Block Sequence Number – Category C Type L**

The Reset Block Sequence Number message is transmitted when the block sequence number on an output multicast line requires resetting.

The Block Sequence Number field in the Reset Block Sequence Number message contains the number to which the Block Sequence Number counter is to be reset. This number is higher than the highest Block Sequence Number previously transmitted.

### **6.2.4 FINRA Open – Category C Type O**

The FINRA Open message is transmitted by FINRA to CQS. This message indicates the Open state of FINRA Market Maker(s). All FINRA Market Maker quotes must be in either an Open or Close state, whereby Open implies ‘current’ and Close implies not current.

### **6.2.5 Disaster Recovery Data Center Activation – Category C Type P**

The Disaster Recovery Data Center Activation message is transmitted to signify that the Consolidated Quotation System (CQS) has switched processing from the Primary Data Center to the Disaster Recovery Data Center. The Disaster Recovery Data Center Activation message is preceded by the transmission of Reset Block Sequence Number Category C Type L messages.

The Block Sequence Number field of the Disaster Recovery Data Center Activation message contains a number greater than the highest Block Sequence Number previously transmitted.

#### **6.2.6 Line Integrity – Category C Type T**

The Line Integrity message is transmitted over the multicast lines at intervals of ten (10) seconds to verify continued integrity of multicast transmission. The Line Integrity message transmission does not interrupt a transmission in progress.

The Block Sequence Number is not incremented for Line Integrity messages. The Block Sequence Number field will contain the Sequence Number of the last transmitted message.

#### **6.2.7 End of Day – Category C Type Z**

The End of Day message is transmitted over the multicast lines to advise all Data Recipients that there are no further messages to be transmitted for the day.

The Block Sequence Number field of the End of Day message contains a number one greater than the highest Block Sequence Number previously transmitted.

**Note:**

- Under normal conditions, upon receiving the End of Day Category C Type Z message, it is the Data Recipient's responsibility to terminate their production CQS output multicast line feeds from SIAC.
- System will continue to publish Line Integrity (Category C Type T) Messages until the CQS multicast lines are brought down.

### 6.3 Market Status Messages – Category M

Market Status messages are used to provide market data information.

Unless otherwise noted, detailed information on each field is contained in alphabetical order in the **Field Descriptions** section of this document.

#### 6.3.1 Market-Wide Circuit Breaker Decline Level Status – Category M Type K

The Market-Wide Circuit Breaker Decline Level Status message is used to report the calculated Level 1, Level 2 and Level 3 threshold values for the current trading day necessary to trigger a circuit breaker. Levels are reset each trading day based on the closing value of the S&P 500 Index. If Levels are set as a result of inaccurate activity, Levels will be reset and disseminated. The most recently disseminated Levels will be in effect for that trading day.

**Note:**

- MWCBS levels are index values (not prices) and have implied 6 decimal places.
- The Market-Wide Circuit Breaker Decline Level Status Message will be disseminated by CQS on a daily trading day basis at approximately 7:00 am and at 8:00 am ET; and additional occurrences if necessary, e.g., due to erroneously set Levels.

Field Name	Length	Type
MWCB Level 1	8	Signed Long
MWCB Level 2	8	Signed Long
MWCB Level 3	8	Signed Long
Reserved	1	TBD
<b>Total Length</b>	<b>25</b>	

### 6.3.2 Market-Wide Circuit Breaker Status – Category M Type L

The Market-Wide Circuit Breaker Status message is used to report the Market-Wide Circuit Breaker threshold Level that has been breached. Each Level will be disseminated only once during the trading day, unless a Level is breached as a result of erroneous activity. The most recently disseminated breached Level will be in effect.

The duration of Market-Wide Circuit Breaker Level 1 and Level 2 Regulatory Trading Halts is fifteen minutes. Following Level 3 Market-Wide Circuit Breaker Regulatory Trading Halts, trading will be halted for the remainder of the trading day and carried over to the following trading day in a Regulatory Trading Halted state.

Field Name	Length	Type
Market-Wide Circuit Breaker Level Indicator	1	Char
Reserved	1	TBD
<b>Total Length</b>	<b>2</b>

## 6.4 Quote Messages – Category Q

### 6.4.1 Auction Status – Category Q Type A

The Auction Status message is used when a Participant in a CTA eligible security, Local Issue or a Bond reports requires Auction Information. Primary Listing Markets using an automated reopening will calculate Auction Collars, in compliance with rules around prices for re-opening, when applicable and will publish the Auction Status message. The initial Auction Collar will be published after the LULD Trading Pause. The ‘Number of Extensions’ field will reflect when a new Auction Status message has been published. The first Auction Collar extension, at the time of the LULD Trading Pause, will be set to zero (0) indicating the first Auction Status message and will increment by one (1) for each new Auction Status message sent during the LULD Trading Pause event.

Field Name	Length	Type
Security Symbol	11	Char [ ]
Instrument Type	1	Char
Auction Collar Reference Price	8	Long
Auction Collar Upper Threshold Price	8	Long
Auction Collar Lower Threshold Price	8	Long

<b>Reserved (for future use)</b>	<b>62</b>	<b>TBD</b>
<b>Total Length</b>	<b>102</b>	

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

#### 6.4.2 Long Quote – Category Q Type L

The Long Quote message is used to report quote data for a CTA eligible Equity, Local Issue or Bonds. This message can also be used to report trading suspensions in a security, price indications and trading range indications. The Long Quote message is used by FINRA ADF only when either no FINRA BBO exists or there is no FINRA BBO change and will not be used to remove FINRA ADF from the NBBO. The Limit Up-Limit Down (LULD) Indicator is not applicable to FINRA ADF quotes.

Field Name	Length	Type

### 6.4.3 Short Quote – Category Q Type Q

The Short Quote message is used to report Bid and Offer quote information for **CTA eligible Equity only** (not used for Local Issues or Bonds) if the quote meets all the criteria and message format requirements, otherwise Long Quote message is used.

The Short Quote has the following criteria:	
1.	Instrument Type is implied 'CTA Eligible Equity'.
2.	Quote Condition is implied 'Regular' quote condition.
3.	Settlement Condition is implied regular way settlement.
4.	Market Condition is implied normal auction market.
5.	Quote is <u>not</u> from FINRA ADF.

#### 6.4.4 Special Long Quote (FINRA ADF) with FINRA BBO Information – Category Q Type S

The Special Quote (FINRA ADF) with FINRA BBO Information message is used only by FINRA to report the FINRA Best Bid and FINRA Best Offer for their Market Makers for CTA eligible Equity, Local Issue or Bond information Makers inclusive of changes to any existing FINRA BBO. The FINRA Best Bid and FINRA Best Offer will be used in the National Best Bid and Best Offer (NBBO) calculation.

#### 6.4.5 National Best Bid Short Appendage and National Best Offer Short Appendage

The National Best Bid Short Appendage and/or National Best Offer Short Appendage is generated whenever a new quote has caused a new National Best Bid and/or new National Best Offer and the Best Bid and/or Best Offer data meets all criteria. If any of the criteria are **not** met, the National Best Bid Long Appendage and/or the National Best Offer Long Appendage format are used. If it is determined that a National Best Bid Short Appendage and/or National Best Offer Short Appendage is required, the appropriate Best Bid and Best Offer information is appended following either the Short Quote, Long Quote or Special Long Quote (FINRA ADF) with FINRA BBO Information message. In instances when both a National Best Bid Short Appendage and a National Best Offer Short Appendage are generated, the National Best Bid Short Appendage will be appended first followed by the National Best Offer Short Appendage.

National Best Bid Short Appendage and National Best Offer Short Appendages have the following criteria:	
1.	Quote Condition is implied 'Regular' for the Best Bid and Best Offer.
2.	No FINRA Best Bid and/or FINRA Best Offer are involved in generating the National Best Bid and National Best Offer.

#### National Best Bid Short Appendage:

Field Name	Length	Type
Best Bid Participant ID	1	Char
Best Bid Price	2	Short
Best Bid Size	2	Short
<b>Total Length</b>	<b>5</b>	

#### National Best Offer Short Appendage:

Field Name	Length	Type
Best Offer Participant ID	1	Char
Best Offer Price	2	Short
Best Offer Size	2	Short
<b>Total Length</b>	<b>5</b>	

**Note:** For a transitional period only, both the National Best Bid and Offer (NBBO) will be generated in Short or Long Appendages when a new quote results in a new National Best Bid or Best Offer.

#### 6.4.6 National Best Bid Long Appendage and National Best Offer Long Appendage

The National Best Bid Long Appendage and/or National Best Offer Long Appendage are generated whenever a new quote has caused a new National Best Bid and/or new National Best Offer. If it is determined that a new National Best Bid Long Appendage and/or National Best Offer Long Appendage is required, the appropriate Best Bid and Best Offer information is appended following either the Short Quote, Long Quote or Special Long Quote (FINRA ADF) with FINRA BBO Information message. In instances when both a National Best Bid Long Appendage and a National Best Offer Long Appendage are generated, the National Best Bid Long Appendage will be appended first followed by the National Best Offer Long Appendage.

##### National Best Bid Long Appendage:

Field Name	Length	Type
Best Bid Participant ID	1	Char
Best Bid Quote Condition	1	Char
Best Bid Price	8	Long
Best Bid Size	4	Integer
FINRA Best Bid Market Maker ID	4	Char [ ]
<b>Total Length</b>	<b>18</b>	

##### National Best Offer Long Appendage:

Field Name	Length	Type
Best Offer Participant ID	1	Char
Best Offer Quote Condition	1	Char
Best Offer Price	8	Long
Best Offer Size	4	Integer
FINRA Best Offer Market Maker ID	4	Char [ ]
<b>Total Length</b>	<b>18</b>	

**Note:** For a transitional period only, both the National Best Bid and Offer (NBBO) will be generated in Short or Long Appendages when a new quote results in a new National Best Bid or Best Offer.

## FIELD DESCRIPTIONS

Field Name	Length	Description	
FINRA BBO LULD Indicator	1	Char.	
		Indicates the affect that the Limit Up-Limit Down Price Bands have on the FINRA Best Bid and FINRA Best Offer (FBBO).	
		Code	Value
		Space	Limit Up-Limit Down Not Applicable
		A	FINRA Best Bid <u>and/or</u> FINRA Best Offer are Executable
		B	FINRA Best Bid outside Price Band – FINRA Best Bid is Non-Executable
		C	FINRA Best Offer outside Price Band – FINRA Best Offer is Non-Executable
		D	FINRA Best Bid <u>and</u> FINRA Best Offer outside Price Band – FINRA Best Bid <u>and</u> FINRA Best Offer are Non-Executable
<b>Note 1:</b> CQS will republish the FINRA Best Bid and FINRA Best Offer if existing FBBOs require adjustments as a result of Limit Up-Limit Down Price Band changes (e.g., an FBBO update to Executable from Non-Executable [or vice-versa]). Price Band messages will contain the <u>latest</u> National and modified FINRA BBO LULD Indicators.			
FINRA Best Bid Market Maker ID	4	Char [4]. Left justified, space-filled.  Contains the FINRA ADF provided FINRA Best Bid Market Maker identifier of the Market Maker that had the FINRA Best Bid (FBBO).	
FINRA Best Bid Price	8	8 Long. Long have implied 6 decimal places and a maximum price of \$18,446,744,073,709.551615. Optional set to zero.  Contains the FINRA ADF provided FINRA Best Bid Price that is the FINRA Best Bid (FBBO).

## FIELD DESCRIPTIONS

Field Name	Length	Description
National BBO LULD Indicator, <i>continued</i>	1	<p><b>Note 1:</b> CQS will modify and republish an NBBO if existing NBBO's require adjustments as a result of Limit Up-Limit Down Price Band changes (e.g., an update to an NBBO to Executable from Non-Executable (or vice-versa). Price Band messages will contain the latest National and FINRA BBO LULD Indicators as well as the National Best Bids and Best Offers.</p> <p><b>Note 2:</b> CQS will be identified as the source of a republished NBBO in the SIP Generated Message Identifier field, and the Message Header Participant ID field will identify the Participant that initiated the original Quote message.</p> <p><b>Note 3:</b> CQS will populate the 'National BBO LULD Indicator' field with a 'Space' as follows:</p> <ul style="list-style-type: none"> <li>(a) Prior to regular trading hours and after regular trading hours.</li> <li>(b) When the current quote does not affect the NBBO (e.g., BBO non-qualifying quote conditions such as Non-Firm quotes).</li> <li>(c) When Price Bands are not in effect (e.g., Price Bands with zero values prevailing).</li> <li>(d) Until the Price Band for a symbol is published.</li> <li>(e) If no eligible quotes have taken place.</li> </ul>
Number of Extensions	1	<p>Byte. Optional set to zero.</p> <p>Identifies the number of manual or automatic extensions the applicable auction has received. The first Auction Collar extension, at the time of the LULD Trading Pause, will be set to zero (0) indicating the first Auction Status message and will increment by one (1) for each new Auction Status message sent during the LULD Trading Pause event.</p>

**APPENDIX B: GLOSSARY**

Term	Description
Below Continuing Listing Standards	A financial status designation pertaining to Tape ‘A’ and Tape ‘B’ listed securities. The status identifies a company, whose issue is listed on the New York Stock Exchange, the NYSE American Stock Market or on one of the participating U.S. Stock Exchanges, and has failed to meet established listings standards. The listing exchange will subsequently review the appropriateness of continuing to list the issue, and may decide to commence the process of delisting the issue.
Cash (Only) Settlement	A security settling in cash all day on a participant or consolidated basis, such as a Common, Preferred or Right that is nearing expiration. Participants can elect to report different settlements in the same security during the day based on their own settlement requirements. For example, one participant can report quotes as cash (only) settlement while another participant can report quotes as regular or next day settlement.
Creations Suspended (For Exchange Traded Products)	A financial status designation used to denote the ability to create new shares of this Exchange Traded Product (ETP) has been temporarily suspended by the ETP Issuer. ETPs that are closed for Creations typically are allowed to continue trading on the listing market once the ETP Issuer publishes the press release.
Crossed Market	Indicates a Bid Price, which is greater than the Offer Price for a security for a quote. (Only applicable to Bonds.)
CTA Eligible Equity	Generally, any common stock, rights, long-term warrants or preferred stock which becomes registered on any national securities exchange or is admitted to unlisted trading privileges thereon and which at the time of such registration or at the commencement of such trading substantially meets the original listing requirements of the NYSE or the NYSE American Stock Market for such securities.

MULTICAST OUTPUT BINARY SPECIFICATION

---

**GLOSSARY**

Term	Description
Late Filing	A financial status designation pertaining to Tape ‘A’ and Tape ‘B’ issues (i.e. issues listed on the NYSE, the NYSE American Stock Market or on one of the participating U.S. Stock Exchanges). The status identifies a company, which has failed to meet established listings standards for filing its annual reports.
Limit Up-Limit Down (LULD) Price Band	<p>The Limit Up-Limit Down Price Band represents a price range which is set at a percentage level above and below the average price of a security over the immediately preceding five (5) minute period. Price Bands prevail for a minimum of thirty (30) seconds. During a Limit State Price Bands will not be disseminated and will recommence when Limit State is terminated.</p> <p>For further details related to Limit Up-Limit Down, reference the following: <a href="http://www.sec.gov/news/press/2011/2011-84.htm">http://www.sec.gov/news/press/2011/2011-84.htm</a></p> <p><b>Note1:</b> There are no sizes associated with LULD Price Bands. <b>Note2:</b> ‘Limit Up-Limit Down’ Price Bands are republished every 30 seconds at clock time.</p>
Limit Up-Limit Down (LULD) Trading Pause	Denotes a five-minute regulatory trading halt (pause) for an individual security that does not exit a Limit State within 15 seconds.
Limit State	Indicates that a National Best Bid is equal to the Upper Limit Price Band, or that a National Best Offer is equal to the Lower Limit Price Band.
Liquidation (For Exchange Traded Products)	A financial status designation used to denote that the ETP Issuer announced the ETP will be liquidated and NYSE ARCA announced the date the ETP will be suspended from trading.
Local Issue	A Local Issue is an issue that does <b>not</b> meet the NYSE American Stock Market or NYSE listing requirements (is not CTA eligible) but is traded at one or more participating U.S. Stock Exchanges.
Locked Market	Indicates an identical Bid and Offer Price for a security for a quote. (Only applicable to Bonds.)

CONSOLIDATED QUOTATION SYSTEM (CQS) PILLAR  
MULTICAST OUTPUT BINARY SPECIFICATION

**GLOSSARY**

Term	Description
Market-Wide Circuit Breaker Level 1 – 7% Decline	This Regulatory Trading Halt is used to denote that trading is suspended due to the S&P 500 Index reaching a 7% decline level below its closing value on the previous trading day. A Level 1 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: before 3:25 p.m. ET – duration 15 minutes; at or after 3:25 p.m. ET – trading shall continue, unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.
Market-Wide Circuit Breaker Level 2 – 13% Decline	This Regulatory Trading Halt is used to denote that trading is suspended due to the S&P 500 Index reaching a 13% decline level below its closing value on the previous trading day. A Level 2 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: before 3:25 p.m. ET – duration 15 minutes; at or after 3:25 p.m. ET – trading shall continue, unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.
Market-Wide Circuit Breaker Level 3 – 20% Decline	This Regulatory Trading Halt is used to denote that trading is suspended due to the S&P 500 Index reaching a 20% decline level below its closing value on the previous trading day. A Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: at any time during regular trading hours, trading shall Halt and <u>not</u> Resume for the remainder of the trading day.
Next Day (Only) Settlement	Same definition as cash (only) settlement except settlement is next day.
Non-Regulatory or Trading Halt	An operational or Trading Halt for a Participant due to Order Imbalance, Order Influx or Operational.
Normal Auction Market	Where the quote bid price is less than the offer price for a security for a Participant.
On Demand Intra-Day Auction	This quote condition is used to provide additional clarity to the CQS Participants and allow them to take part in an auction which will enhance liquidity in the marketplace. It is anticipated that this quote condition will be input into CQS by Participants with a zero bid price, zero bid size, zero offer price, and zero offer size and disseminated over the CQS multicast output lines.
Price Indication	Reflects an approximate price range of what a security's trading range (bid and offer prices) will be when trading resumes after a Trading Halt.
Redemptions Suspended (For Exchange Traded Products)	A financial status designation used to denote the ability to redeem shares of this ETP has been suspended by the ETP Issuer. ETPs that are closed for redemption will remain halted on the listing market.
Regular Way Settlement	The settlement date is within three (3) business days following the date of the transaction.

**GLOSSARY**

<b>Term</b>	<b>Description</b>
Regulatory Halt - Additional Information Requested	Denotes a regulatory trading halt when the primary market has requested additional information from the issuer of the security. Trading is suspended until the primary market has received and reviewed the requested information.
Regulatory Halt - Corporate Action	Denotes a regulatory trading halt when the primary market determines a halt is necessary pending the outcome of a Corporate Action event. Trading is suspended until the results of the Corporate Action are confirmed and the security is suitable for trading.
Regulatory Halt - ETF Component Prices Not Available	Denotes a regulatory trading halt when a significant percentage of an ETF's weight is invested in components in which pricing is not available. Trading is suspended until the primary market determines that such condition no longer exists.
Regulatory Halt - Intraday Indicative Value Not Available	Denotes a regulatory trading halt when the Intraday Indicative Value of an ETF is not being disseminated or is being disseminated incorrectly. Trading is suspended until the primary market determines that such condition no longer exists.
Regulatory Halt - Merger Effective	Denotes a regulatory trading halt in connection with a security being suspended in connection with a merger. Trading is suspended indefinitely.
Regulatory Halt - New Security Offering	Denotes a regulatory trading halt in connection with a new security offering. Trading is suspended until the new security is admitted to trading on the primary listing exchange during the primary trading session.
Regulatory Halt - News Pending	Denotes a regulatory Trading Halt due to an expected news announcement, which may influence the security. A Trading Halt may be continued once the news has been disseminated.
Regulatory Halt - News Released	Denotes a regulatory trading halt when relevant news influencing the security is being disseminated. Trading is suspended until the primary market determines that an adequate time has passed to allow for full dissemination of the news into the market.
Regulatory Halt - Regulatory Concern	Denotes a regulatory trading halt due to an ongoing regulatory concern regarding the suitability of trading in a security. Trading is suspended until the primary market determines the security is suitable for trading.

**GLOSSARY**

Term	Description
Republished Limit Up-Limit Down Price Band	Indicates that the Price Band being disseminated is a republication of the latest Price Band for a security.
Resume	This quote condition along with zero-filled bid, offer and size fields is used to indicate that trading for a Participant is no longer suspended in a security which had been Trading Halted.
Short Sale Restriction	A restriction designed to control short selling from further driving down the price of a security any day in which the price declines by 10% or more from the previous day's closing price. Once the Short Sale Restriction is activated, a Short Sale Restriction would be in effect in that security for the remainder of the day as well as the following day, unless deactivated.
Sub-Penny Trading	Indicates a non-regulatory Trading Halt for a security whose price may fall below \$1.05, possibly leading to a sub-penny execution.
Trading Halt	Temporary halt in trading in a particular security for a Participant.

20:05	End of Day***

\*\*\* All CQS Participant Lines are brought down (Dependent on all Participants being closed).

**Afterhours Test Data Dissemination:**

- CQS Multicast Data Recipients are reminded that test data dissemination over CQS multicast data feeds can commence as early as **8:30 P.M. ET** and terminate as late as **11:00 P.M. ET** during business weekdays and any time during Saturdays, Sundays and Market holidays. This test period is accommodated to allow testing opportunities for Participants and Data Recipients, as well as to provide test time to rectify any production problems that may have occurred the prior business day. Multicast data feed recipients should take the necessary precautions to protect their systems against any adverse impact (e.g., database corruption) if processing data throughout the test dissemination period. During the test period, note that test data can be disseminated over all CQS multicast channels (e.g., Production, Retransmission or Playback Test Group IP addresses).

## **APPENDIX E: CQS CLOSING ROUTINE**

A Participant can individually close a security by sending in a closing quote to CQS. CQS disseminates this closing quote over the Multicast Line and appends a new NBBO, excluding that Participant, if that Participant was part of the current NBBO.

Additionally upon receiving FINRA Close (Category C Type C) message from FINRA, CQS disseminates Closing Quote (Quote Condition L) for any securities where FINRA had previously quoted a BBO eligible FINRA Best Bid and Offer.

## APPENDIX F: NATIONAL BEST BID AND OFFER OVERVIEW

National Best Bid and Best Offer calculations are performed for each Market Center beginning at various times (between 4:00 a.m. and 9:30 a.m. ET) whenever a new qualifying quote is received after a Participant Market Open. If it is determined that the new quote or FINRA provided FBBO has caused a new National BBO, the appropriate National BBO information is appended to the new Short Quote, Long Quote or Special Long Quote (FINRA ADF) with FINRA BBO Information quote message. Appendages are not added if it is determined that the current quote does not affect the National BBO.

A new quote can be the entire new National BBO quote (both Bid and Offer). In addition, the National BBO and FINRA provided FBBO can indicate a Crossed Market where the Bid price is higher than the Offer price or a Locked Market where both the Bid and the Offer prices are the same.

CQS generates a National BBO based on the following criteria in this order:

- **Price** - Exchanges with highest Bid and lowest Offers have overall priority.
- **Size** - Largest size takes precedence when multiple Exchanges submit the same Bid and/or Offer price.
- **Time** - Earliest time takes precedence when multiple Exchanges submit the same Bid and/or Offer price with the same size.

## **APPENDIX F: NATIONAL BEST BID AND OFFER OVERVIEW, continued**

### **BBO Considerations**

There are several trading conditions that affect the calculations of a National BBO for a security, including:

#### **Non-Qualifying Quote Conditions**

If a quote with a non-qualifying quote condition is entered from a Participant which made up part or all of the current National BBO, CQS will calculate and append a new National BBO.

#### **Participant Overall Halt in Trading**

If a Participant were to halt trading in all securities during the trading day (due to computer failure, market shutdown, etc.), CQS, when instructed by the Participant, can send a 'Zero Quote' for only those issues in which that Participant had an outstanding BBO eligible quote. A new National BBO is calculated and, if necessary appends a new National BBO.

### **FINRA BBO**

FINRA provides a FINRA calculated FBBO and the FBBO is included in the National BBO calculations.

If part of the new FINRA BBO is also part of the new National BBO, the appropriate National BBO information is also appended to the Short Quote, Long Quote or Special Long Quote (FINRA ADF) with FINRA BBO Information message.

## APPENDIX G: QUOTE CONDITIONS

The quote condition determines whether a quote qualifies to be included in the calculation of the National BBO. The National BBO calculation is performed whenever a new qualifying quote with price and size filled Bid and/or Offer is received from a Participant. For quotes with BBO eligible quote conditions containing zero-filled price and size Bid and Offer information, the National BBO is recalculated excluding the Participant that transmitted the BBO eligible quote condition with zero-filled prices and sizes.

The quote conditions may be viewed as belonging to two classes:

1. Those that qualify for inclusion in the National Best Bid & Offer (BBO) calculations.
2. Those that do not qualify for inclusion in the National Best Bid & Offer (BBO) calculations.

### **BBO Eligible Quotes**

#### **Quote Condition A – Slow Quote on the Offer Side**

This condition indicates that the current offer is in ‘Slow’ quote mode. While in this mode, auto-execution is not eligible on the Offer side and can be traded through pursuant to anticipated Regulation NMS requirements.

#### **Quote Condition B – Slow Quote on the Bid Side**

This condition indicates that the current bid is in ‘Slow’ quote mode. While in this mode, auto-execution is not eligible on the Bid side and can be traded through pursuant to anticipated Regulation NMS requirements.

#### **Quote Condition E – Slow Quote due to Liquidity Replenishment Point (LRP) or Gap Quote on the Bid Side - Only OFFER SIDE is eligible for BBO**

This quote condition is used to indicate that the current Bid is in ‘Slow’ quote mode due to a Liquidity Replenishment Point (LRP) or Gap Quote. While in this mode, auto-execution is not eligible, the quote is then considered Slow on the Bid side and can be traded through, as per Regulation NMS.

## **APPENDIX G: QUOTE CONDITIONS**

### **BBO Eligible Quotes**

#### **Quote Condition F - Slow Quote due to Liquidity Replenishment Point (LRP) or Gap Quote on the Offer Side - Only BID SIDE is eligible for BBO**

This quote condition is used to indicate that the current Offer is in Slow quote mode due to a Liquidity Replenishment Point (LRP) or Gap Quote. While in this mode, auto-execution is not eligible, the quote is then considered Slow on the Offer side and can be traded through, as per Regulation NMS.

#### **Quote Condition H - Slow Quote on the Bid and Offer Sides**

This condition indicates that the quote is a 'Slow' quote on both the Bid and Offer sides. While in this mode, auto-execution is not eligible on the Bid and Offer sides, and either or both sides can be traded through pursuant to anticipated Regulation NMS requirements.

#### **Quote Condition O - Opening Quote**

This condition can be disseminated to indicate that this quote was the opening quote for a security for that Participant.

#### **Quote Condition R - Regular (for FINRA - Market Maker Open)**

This condition is used for the majority of quotes to indicate a normal trading environment. It is also used by the FINRA Market Makers in place of Quote Condition 'O' to indicate the first quote of the day for a particular security. The condition may also be used when a Market Maker re-opens a security during the day.

#### **Quote Condition W – Slow Quote Due to Set Slow List on both Bid and Offer Sides**

This quote condition is used to indicate that the quote is a Slow Quote on both the Bid and Offer sides due to a Set Slow List that includes High Price securities. While in this mode, auto-execution is not eligible, the quote is then considered Slow on the Bid and Offer sides and either or both sides can be traded through, as per Regulation NMS.

## **APPENDIX G: QUOTE CONDITIONS**

### **BBO Ineligible Quotes**

#### **Quote Condition C - Closing Quote**

This condition can be disseminated to indicate that this quote was the last quote for a security for that Participant.

#### **Quote Condition L - Market Maker Quotes Closed (FINRA)**

This condition is disseminated by each individual FINRA Market Maker to signify either the last quote of the day or the premature close of an individual Market Maker for the day. In the latter case, the Market Maker can re-open by transmitting a quote accompanied by the Quote Condition R.

#### **Quote Condition N - Non-Firm Quote**

This quote condition suspends a Participant's firm quote obligation for a quote for a security.

#### **Quote Condition U - Slow Quote due to Liquidity Replenishment Point (LRP) or Gap Quote on both the Bid and Offer Sides**

This quote condition is used to indicate that the quote is a Slow Quote on both the Bid and Offer sides due to a Liquidity Replenishment Point (LRP) or Gap Quote. While in this mode, auto-execution is not eligible, the quote is then considered Slow on the Bid and Offer sides, and either or both sides can be traded through, as per Regulation NMS.

#### **Quote Condition 4 – On Demand Intra-Day Auction**

This quote condition is used to provide additional clarity to the industry participants and to allow participants to take part in an auction which will enhance liquidity in the marketplace.

## **APPENDIX H: SECURITY STATUS INDICATORS**

In addition to the Quote Condition field determining whether a quote qualifies to be included in the calculation of the National BBO the Security Status field is also considered in the calculation of the National BBO. If the Security Status Indicator is populated with either a regulatory or a non-regulatory status (other than Market Wide Circuit Breaker Levels), it will result in the BBO being recalculated excluding the Participant from the BBO if that Participant was part or all of the BBO.

### **Security Status Indicator 1 – Market-Wide Circuit Breaker Level 1 – Breached**

This security status indicator is used to indicate that trading is suspended due to the S&P 500 Index reaching a 7% decline level below its closing value on the previous trading day. A Level 1 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: before 3:25 p.m. ET – duration 15 minutes; at or after 3:25 p.m. ET – trading shall continue, unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.

### **Security Status Indicator 2 – Market-Wide Circuit Breaker Level 2 – Breached**

This security status indicator is used to indicate that trading is suspended due to the S&P 500 Index reaching a 13% decline level below its closing value on the previous trading day. A Level 2 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: before 3:25 p.m. ET – duration 15 minutes; at or after 3:25 p.m. ET – trading shall continue, unless there is a Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt.

### **Security Status Indicator 3 – Market-Wide Circuit Breaker Level 3 – Breached**

This security status indicator is used to indicate that trading is suspended due to the S&P 500 Index reaching a 20% decline level below its closing value on the previous trading day. A Level 3 Market-Wide Circuit Breaker Regulatory Trading Halt would operate as follows: at any time during regular trading hours, trading shall Halt and not Resume for the remainder of the trading day.

### **Security Status Indicator A - Additional Information Requested**

This security status indicator is used to indicate a regulatory Trading Halt when the primary market has requested additional information from the issuer of the security. Trading is suspended until the primary market has received and reviewed the requested information.

### **Security Status Indicator C - Regulatory Concern**

This security status indicator is used to indicate a regulatory Trading Halt due to an ongoing regulatory concern regarding the suitability of trading in a security. Trading is suspended until the primary market determines the security is suitable for trading

### **Security Status Indicator D - News Released**

This regulatory Trading Halt is used when relevant news influencing the security is being disseminated. Trading is suspended until the primary market determines that an adequate time has passed to allow for full dissemination of the news into the market.

### **Security Status Indicator E - Merger Effective**

This security status indicator is used to indicate a regulatory Trading Halt in connection with a security being suspended in connection with a merger. Trading is suspended indefinitely.

### **Security Status Indicator F - ETF Component Prices Not Available**

The regulatory trading halt is used when a significant percentage of an ETF's weight is invested in components in which pricing is not available. Trading is suspended until the primary market determines that such condition no longer exists.

### **Security Status Indicator G - Trading Range Indication**

The trading range indication is used to denote the probable trading range (bid and offer prices, no sizes) of a security that is **not** Trading Halted. The Trading Range Indication is used prior to or after the opening of a security.

### **Security Status Indicator I - Order Imbalance**

This non-regulatory Trading Halt is used when there is a significant imbalance of buy or sell orders.

### **Security Status Indicator M – Limit Up-Limit Down (LULD) Trading Pause**

This regulatory Trading Halt is used to indicate conditions in which a stock experiences a 10% or more change in price over a five minute period.

### **Security Status Indicator N - Corporate Action**

This security status indicator is used to indicate a regulatory Trading Halt when the primary market determines a halt is necessary pending the outcome of a Corporate Action event. Trading is suspended until the results of the Corporate Action are confirmed and the security is suitable for trading.

### **Security Status Indicator O- New Security Offering**

This security status indicator is used to indicate a regulatory Trading Halt in connection with a new security offering. Trading is suspended until the new security is admitted to trading on the primary listing exchange during the primary trading session.

## **APPENDIX H: SECURITY STATUS INDICATORS**

### **Security Status Indicator P - News Pending**

This security status indicator is used to indicate a regulatory Trading Halt due to an expected news announcement, which may influence the security. A Trading Halt may be continued once the news has been disseminated.

### **Security Status Indicator V - Intraday Indicative Value Not Available**

The regulatory trading halt is used when the Intraday Indicative Value of an ETF is not being disseminated or is being disseminated incorrectly. Trading is suspended until the primary market determines that such condition no longer exists.

### **Security Status Indicator T - Resume**

This security status indicator along with zero-filled bid, offer and size fields is used to indicate that trading for a Participant is no longer suspended in a security which has been Trading Halted.

### **Security Status Indicator X - Operational**

This non-regulatory Trading Halt is used when the ability to trade a security by a Participant is temporarily inhibited due to technical reasons.

### **Security Status Indicator Y – Sub-Penny Trading**

This non-regulatory Trading Halt is used to indicate a Trading Halt for a security whose price may fall below \$1.05, possibly leading to a sub-penny execution.
