## 1 Overview

This document details the Nasdaq FIX trade reporting protocol and the user requirements for accessing that protocol for FINRA/Nasdaq TRF trade reporting and clearing, as well as Nasdaq Market Center clearing functions. FINRA and Nasdaq have established a second Trade Reporting Facility, FINRA/NASDAQ TRF Chicago ("TRF Chicago"). The functionality and rules for TRF Chicago are the same as those of the current FINRA / Nasdaq TRF ("TRF Carteret"). This document also outlines the messages transmitted via FIX 4.2 for trade reporting to TRF Carteret and TRF Chicago.

The trade reporting protocol facilitates the reporting of transactions executed otherwise than on an exchange in all NMS stocks as defined in Rule 600(b)(47) of SEC Regulation NMS. Members that use the FINRA/Nasdaq Trade Reporting Facility must comply with the Rule 6300A and 7200A Series, as well as all other applicable rules. It allows you to enter trades and have these trades made available for trade reporting, matching, and clearing. Trades are forwarded to the appropriate reporting agency, either Nasdaq or SIAC, and to the Depository Trust Clearing Corporation (DTCC) as applicable.

As new functionality becomes available, you will receive technical updates detailing that functionality. At the same time the technical update is distributed, this programming specification will be updated on the Nasdaq Trader web site at: <http://www.nasdaqtrader.com/Trader.aspx?id=TradingSpecs>

## **2 Nasdaq FIX Trade Reporting**

### **2.1 Trade Report Submission**

FINRA Rule 6380A(b) prescribes which FINRA member has the trade reporting obligation and is deemed to be the Executing Party under FINRA rules. FINRA members and their reporting agents should refer to FINRA Rule 6380A(b) to determine who is obligated to report a trade. As part of the FINRA reporting obligation validations implemented on 2/29/16, all "contra party" trades (452=17) are required to have "PublishTrdIndicator=N".

In our specification, we refer to the party with the trade reporting obligation as the "Executing party" and other side as the "Contra party."

### **2.2 M1 Matching**

Trade entries can be matched in two ways:

- M1 match process; and
- Alleged party acceptance.

Firm A sends in a trade entry message for 1000 shares of XYZ at \$10 alleging Firm B. This entry initiates the M1 trade matching process, which compares trades one-to-one. The system attempts to match the Firm A trade entry with an identical Firm B trade entry. The system finds an identical Firm B trade entry for 1000 shares of XYZ at \$10 and locks it in. See [Section 4.3.2.3](#)

Firm A sends in a trade entry message alleging Firm B. Firm B responds with an accept message (instead of entering in its own trade entry message). Through that acceptance, Firm B enters into a locked-in trade with Firm A. See [Section 4.3.2.3](#)

### **2.3 Short Sale Reporting**

Firms are obligated to include an indication of a short sale transaction as part of their trade entry. As of July 16, 2018, firms are requested to submit using a new FIX Tag 22024 (ShortSaleIndicator) for short sale reporting. Nasdaq TRF will accept either the existing Short Sale Tag 853 or Tag 22024 during a 90 day transition period from July 16 to Oct 15, 2018. After October 15, 2018, submissions with FIX tag 853 will be rejected. [Note: if both short sale reporting methods are used, the system will use the new reporting method].

The table below defines the supported value combinations for tags 54 and 853, and 22024 during the Short Sale Reporting transition period, July 16 to October 15, 2018. Value combinations not defined below will be rejected.

| <b>Sale Type</b>                   | <b>Tag 54</b> | <b>Tag 853</b> | <b>Tag 22024</b> | <b>Comments</b>                         |
|------------------------------------|---------------|----------------|------------------|-----------------------------------------|
| Buy                                | 1             | blank          | blank            |                                         |
| Sell                               | 2             | blank          | blank            |                                         |
| Cross                              | 8             | blank          | blank            |                                         |
| Dealer Sold Short                  | 2             | 0              | S                |                                         |
| Dealer Sold Short Exempt           | 2             | 1              | E                |                                         |
| Selling Customer Sold Short        | 8             | 2              | S                | MPID must be present in tag 375         |
| Selling Customer Sold Short Exempt | 8             | 3              | E                | MPID must be present in tag 375         |
| Contra Side Sold Short             | 1             | 4              | S                | ContraBroker must be present in tag 375 |
| Contra Side Sold Short Exempt      | 1             | 5              | E                | ContraBroker must be present in tag 375 |
| Selling Customer Sold Short        | 1             | 2              | S                | ContraBroker in tag 375 must be omitted |
| Selling Customer Sold Short Exempt | 1             | 3              | E                | ContraBroker in tag 375 must be omitted |

Historically, it was not possible for firms to indicate short sale status when accepting a match & compare trade. Beginning on July 16, 2018 it will be possible for the seller to provide a ShortSaleIndicator when accepting trades. After October 15, 2018, the buyer will be blocked from submitting short sale status (via trade entry or trade accept) on a match & compare transaction; rather, it will become the seller's responsibility to provide short sale status in this case.

On the outbound messaging, short selling information is currently provided in tag 853. During the transition (from July 16 – Oct 15 2018), it will be provided in both tags 853 and 22024. After Oct 15, 2018, customers are expected to look for it in tag 22024. Note that as a short sale is proprietary information, the short sale indicators will be included in an alleged message TTAL only if the firm being alleged is the seller in the transaction.

For more information, please refer to FINRA Trade Reporting FAQs on short sale reporting: <http://www.finra.org/industry/trade-reporting-faq#407>

## **2.4 T-messages v. C-messages**

Outgoing messages are identified by names such as TCER or CTER (for Error). Messages with names that begin with "T" are sent to trade reporting firms and non-trade reporting firms. Messages with names that begin with "C" are sent to clearing firms. For example, when a firm is alleged, it receives a TTAL message. That firm's clearing firm receives a CTAL. These message names are included in tag 58 of all outbound messages. Please note that C-messages will not be part of our initial implementation.

## **2.5 Required Fields**

Message format tables indicate which tags are required. Fields are required either by FIX (=Y), by Nasdaq (=Q), or by neither (=N).

## **2.6 Price fields**

The trade price and contract amount are included in the same tag, AvgPx. Tag 423, PriceType, indicates whether tag 6 is the trade price or the contract amount. The formats of these values are, however, different. The price field is 12 characters in length. The trade price allows six digits for the whole number and six digits for the decimal portion. The contract amount allows 10 digits for the whole number and two digits for the decimal portion.

Decimal Price Field Examples:

Example 1: Six Decimal Unit Price (Unit Price = 6.0258)

Decimal Price Expansion field = "000006.025800"

Example 2: Two Decimal Unity Price (Unit Price = 12.34)

Decimal Price Expansion field = "000012.340000"

Example 3: Two Decimal Contract Amount (Contract Amount = 6758.75)

Decimal Price Expansion field = "0000006758.75"

Example 4: Two Decimal Contract Amount (Contract Amount = 34.56)

Decimal Price Expansion field = "0000000034.56"

## **2.7 Message Type**

Nasdaq FIX supports these message types for trade reporting:

| Type | Message          | Inbound, Outbound, or Both |
|------|------------------|----------------------------|
| A    | Logon            | B                          |
| 0    | Heartbeat        | B                          |
| 1    | Test Request     | B                          |
| 2    | Resend Request   | B                          |
| 3    | Reject           | O                          |
| 4    | Sequence Reset   | B                          |
| 5    | Logout           | B                          |
| 8    | Execution Report | B                          |

Because `MsgType = 8` is being used for all application messages, tag 856, `TradeReportType`, is used to identify the type of message.

Tag 856, `TradeReportType`:

- |                           |                                   |
|---------------------------|-----------------------------------|
| 0 = submit                | 95 = participant indicator        |
| 1 = alleged               | 96 = blockbuster                  |
| 2 = accept                | 97 = sizable                      |
| 3 = decline               | 98 = net trade threshold          |
| 4 = addendum              | 99 = net trade threshold fallback |
| 6 = trade report cancel   |                                   |
| 7 = locked-in trade break |                                   |
| 8 = error                 |                                   |

| Incoming Message     | 856 = | Outgoing Message                                  | 856 = |
|----------------------|-------|---------------------------------------------------|-------|
| Entry (Function V)   | 0     | TTEN/CTEN/TREN/CREN/TGEN/CGEN/TKEN/CKEN/TYEN/CYEN | 0     |
| Accept (Function A)  | 2     | TTAL/CTAL/TRAL/CRAL/TGAL/CGAL/TKAL/CKAL/TYAL/CYAL | 1     |
| Break (Function B)   | 7     | TCLK/CCLK                                         | 2     |
| Cancel (Function C)  | 6     | TCBK/CCBK                                         | 7     |
| Decline (Function D) | 3     | TCAN/CCAN                                         | 6     |
| Error (Function E)   | 8     | TCDE/CCDE                                         | 3     |
|                      |       | TCER/CCER                                         | 8     |
|                      |       | TTUD/CTUD                                         | 4     |
|                      |       | TCPI                                              | 95    |
|                      |       | TCBT/CCBT                                         | 96    |
|                      |       | TCST/CCST                                         | 97    |
|                      |       | TTNT/TTNP                                         | 98    |
|                      |       | TTFB/TTFP                                         | 99    |

Please see section 6 for scenarios.

## 2.8 Message Identification

The tables in this section highlight the ID and reference number tags that will be used in Nasdaq FIX trade reporting. They are not complete message formats. Please note that these descriptions apply to messages that you submit to Nasdaq.

All TRADE ENTRY messages from you to Nasdaq have these ID tags:

| Tag | Name          | Req'd | Description                                                                                                                           |
|-----|---------------|-------|---------------------------------------------------------------------------------------------------------------------------------------|
| 11  | ClOrdID       | N     | Max 20 char length. Your reference number. This tag is not required to be unique and is not validated in trade reporting.             |
| 17  | ExecID        | Y     | Max 20 char length. Your reference number or 0 (zero). This tag is not required to be unique and is not validated in trade reporting. |
| 37  | OrderID       | Y     | Max 20 char length. Your reference number or 0 (zero). This tag is not required to be unique and is not validated in trade reporting. |
| 571 | TradeReportID | Y     | Max 20 char length. Unique identifier of trade report. Must be unique per day per connector for your firm across all messages.        |

All other messages from you to Nasdaq have these ID tags:

| Tag | Name    | Req'd | Description                                                                                                                           |
|-----|---------|-------|---------------------------------------------------------------------------------------------------------------------------------------|
| 11  | ClOrdID | N     | Max 20 char length. Your reference number. This tag is not required to be unique and is not validated in trade reporting.             |
| 17  | ExecID  | Y     | Max 20 char length. Your reference number or 0 (zero). This tag is not required to be unique and is not validated in trade reporting. |
| 37  | OrderID | Y     | Max 20 char length. Your reference number or 0 (zero). This tag is not required to be unique and is not validated in trade reporting. |

| Tag | Name             | Req'd | Description                                                                                            |
|-----|------------------|-------|--------------------------------------------------------------------------------------------------------|
| 571 | TradeReportID    | Y     | Unique identifier of message. Must be unique per day per connector for your firm across all messages.  |
| 572 | TradeReportRefID | N     | Contains the value indicated in tag 571 in the original trade entry message.                           |
| 880 | TrdMatchID       | Y     | Nasdaq-assigned, unique alphanumeric control number. This is commonly known as the ACT Control Number. |

Acknowledgement messages (ACKs) are sent in response to an inbound message and are sent to the firm that entered that message. Unsolicited messages (UMs) are sent in response to an inbound message and are sent to all non-trade reporting parties included on that inbound message.

All ACKNOWLEDGEMENT messages coming from Nasdaq have these tags:

| Tag | Name             | Req'd | Description                                                                                                                                        |
|-----|------------------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 11  | ClOrdID          | N     | Contains the value indicated in the inbound message, if any.                                                                                       |
| 17  | ExecID           | Y     | Contains the value indicated in the inbound message or 0 (zero).                                                                                   |
| 37  | OrderID          | Y     | Contains the value indicated in the inbound message or 0 (zero).                                                                                   |
| 571 | TradeReportID    | Y     | Contains the value indicated in the inbound message.                                                                                               |
| 572 | TradeReportRefID | N     | Contains the first 6 characters of the value indicated in the inbound message, if any.                                                             |
| 880 | TrdMatchID       | Y     | Nasdaq assigns a unique alphanumeric control number to every transaction entered into the system. This is commonly known as the ACT Control Number |

All UNSOLICITED messages coming from Nasdaq have these tags:

| Tag | Name          | Req'd | Description                                                                                            |
|-----|---------------|-------|--------------------------------------------------------------------------------------------------------|
| 571 | TradeReportID | Y     | Contains a Nasdaq-defined, unique identification number for this message.                              |
| 880 | TrdMatchID    | Y     | Nasdaq-assigned, unique alphanumeric control number. This is commonly known as the ACT Control Number. |

## 2.9 Possible Duplicates and Resends

You should set tag 43, PossDupFlag, if you are sending a message with a sequence number that was already used. This tag is required for retransmissions. Nasdaq will process as follows:

| If tag 43 = | & Seq # is a dup | then, Nasdaq will...          |
|-------------|------------------|-------------------------------|
| Y           | Y                | Ignore the message.           |
| Y           | N                | Process the message normally. |
| N           | Y                | Drop the connection.          |
| N           | N                | Process the message normally. |

You should set tag 97, PossResend, if you are sending a message that may be a duplicate of another message. Nasdaq will process as follows:

| If tag 97 = | & tag 571 is a dup | then, Nasdaq will...                                                                                                                                       |
|-------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y           | Y                  | Send you an acknowledgement, and if this is the first time we are receiving this message, then we will send appropriate responses to all parties involved. |
| N           | Y                  | Reject the message.                                                                                                                                        |
| Y           | N                  | Process the message normally.                                                                                                                              |
| N           | N                  | Process the message normally.                                                                                                                              |

## 2.10 Explicit Fee

FINRA Rule 7230A(h) allows FINRA members to collect explicit fee amounts from broker-dealer customers through the FINRA/Nasdaq TRF. Tag 9822, ClearingPrice, was added for this reason. Firms may submit trade reports that include a transaction fee that, in turn, will be included in the regular clearance and settlement process at the National Securities Clearance Corporation (DTCC). Clearing Price contains Unit Price + Explicit Fee per share, if the tag 423, PriceType, is 98. It contains Contact Price + Total Explicit fee, if PriceType is 99.

Firms must have an agreement with each other on file before they can use trade reporting for the collection/payment of fees. These agreements will be enforced systematically and are maintained by Nasdaq on behalf of FINRA.

You may only use the FINRA/Nasdaq TRF to collect/pay fees from/to other FINRA members. A fee can only be collected when it is included as part of the clearing price. The fee must be per share. You are not allowed to enter transactions that are comprised only of fees.

You have the responsibility to make sure that the trade price is reported to the tape.

This functionality is optional. Please contact Nasdaq if you wish to participate. Section [1.1](#) has contact information.

## **2.11 Timestamps**

The FINRA/Nasdaq TRF supports timestamps with up to nanosecond granularity (HH:MM:SS.ssssssss) in accordance with amendments to FINRA's equity trade reporting rules. Please refer to FINRA Regulatory Notice 20-41 for additional information on firms' reporting obligations under these amendments.

*FINRA/Nasdaq TRF will accept inbound timestamps with either second, millisecond, microseconds, or nanosecond resolution. Outbound timestamps resolution will be sent based on a firm's TRF outbound message configuration. If you would like to make changes to your message configuration, please contact Subscriber Services ([subscriber@Nasdaq.com](mailto:subscriber@Nasdaq.com)).*

### 3 Session Details

#### 3.1 Hours of Operation

All times are Eastern.

##### 3.1.1 Regular Trading Day

###### Logon/Logoff

- [Starting March 30, 2026](#), Nasdaq FIX will be up and accessible for connectivity at 3:30:00 a.m. (see Section 4.2.1 Heartbeat), and trade reporting will not be available until 4:00:00 a.m.
- Nasdaq FIX will remain up and running until 8:00:00 p.m.
- Although it is not required, we suggest you log off at the end of your trading day. Otherwise, Nasdaq will log you off at shutdown.

###### Messaging

- Pre-market hours are from 4:00:00 a.m. until 9:29:59 a.m.
- Market hours are from 9:30:00 a.m. until 4:00:00 p.m.
- Post-market hours are from 4:00:00 p.m. until 8:00 p.m.
- Trade Entry is allowed between 4:00:00 a.m. until 8:00:00 p.m.
- Trades entered between 8:00:01 p.m. and 3:59:59 a.m. will be rejected.
- To correct an as-of trade, you must cancel the trade and re-enter it. This also applies to non-trade reporting party entries.

| Time Table                   |                                                                                                                                                                                                                                                              |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4:00:00 a.m. to 9:29:59 a.m. | Trades executed during this period must be reported with T modifier within 10 seconds of execution. If not reported within 10 seconds of execution, must be reported with U modifier.<br><br>New pre-market hours will be effective starting March 30, 2026. |
| 9:30:00 a.m. to              | Market Hours                                                                                                                                                                                                                                                 |

| Time Table                          |                                                                                                                                                                                                                                                            |

| 8:00:00 p.m.                        | System Closed (new trade reports will be rejected)                                                                                                                                                                                                         |
| 8:00:00 pm –<br>08:19:59 pm         | End of Trade Action<br>You may accept or decline trades entered during regular or after-market hours                                                                                                                                                       |
| 8:00:00 p.m. to<br>11:59:59 p.m.    | Trades executed during this period are reported the next day on an as-of basis. Trades executed during this period must be reported with T modifier within 15 minutes of system open. If not reported within 15 minutes, must be reported with U modifier. |
| 12:00:00 a.m.<br>to<br>3:59:59 a.m. | Trades executed during this period must be reported with T modifier within 15 minutes of system open. If not reported within 15 minutes, must be reported with U modifier.                                                                                 |

### Trades Executed on Non-business Days

Trades executed on non-business days must be reported by 8:15 a.m. on the next business day with a T modifier.

### Breakdown of cancel/correct impacts by execution and report times:

For T trades, if the Execution Time is 4:00:00 p.m. to 8:00:00 p.m., then Report Time is 4:00:00 p.m. to 8:00 p.m. and the Cancel Time is 4:00:00 p.m. to 8:20:00 p.m.

For T trades, if the Execution Time is 12:00:00 a.m. to 9:29:59 a.m., then Report Time is 4:00:00 a.m. to 8:00:00 p.m. and the Cancel Time is 4:00:00 a.m. to 8:00:00 p.m.

For regular way or modified trades (not T), if the Execution Time is 9:30 a.m. to 4:00:00 p.m., then Report Time is 9:30:00 a.m. to 8:00:00 p.m. and the Cancel Time is 9:30:00 a.m. to 8:00:00 p.m.

For As Of trades, if the Execution Time is 8:00:00 p.m. to 11:59:59 p.m., then Report Time is 4:00:00 a.m. to 8:00:00 p.m. and the Cancel Time is 4:00:00 a.m. to 8:00:00 p.m.

### **3.1.2 Early Close Trading Day**

A planned early market close usually occurs at 1:00:00 p.m. Nasdaq will notify you of an early close by Head Trader Alert that will provide closing times. In unforeseen circumstances, an unplanned early market close may be necessary. Again, Nasdaq will notify you of such an event by Head Trader Alert. Head Trader Alerts are available online at: <http://www.nasdaqtrader.com/>

#### **Logon/Logoff**

- As with regular trading days, Nasdaq FIX will be up and accessible for connectivity at 3:30 a.m (see Section 4.2.1 Heartbeat), and trade reporting will not be available until 4:00 AM.
- Logons are accepted any time after 3:30:00 a.m., and all messaging remains the same through market open.
- Nasdaq FIX will remain up and running until 5:00:00 p.m.
- Logoffs are not required. If you choose to log off, do so by 5:00:00 p.m.

#### **Messaging**

- Pre-market hours are from 4:00:00 a.m. until 9:30:00 a.m.
- Market hours are from 9:30:00 a.m. until 1:00:00 p.m.
- Post-market hours are from 1:00:00 p.m. until 5:00:00:00 p.m.
- Trades entered between 5:00:01 p.m. and 3:59:59 a.m. will be rejected.
- To correct an As of Trade, you must cancel the trade and re-enter it. This also applies to non-trade reporting party entries.

### **3.1.3 Submission of Messages on Non-trading Days**

All messages, including logon, will be rejected on non-trading days. Of course, users will be able to logon and test on User Acceptance Test days.

### 3.2 Connectivity

You have the ability to send Nasdaq FIX order messages and Nasdaq FIX trade reporting messages over the same connection, although you may choose to send them over separate connections. You should make the decision after considering your own architecture and performance requirements.

To indicate the destination of your message within Nasdaq, you will use tag 57, `TargetSubID`. The values of this tag are:

- S = Nasdaq Market Center orders
- T = FINRA/Nasdaq TRF and Nasdaq Market Center trade reporting

Messages associated with orders must be sent to Nasdaq's order system, while messages associated with trade entries must be sent to Nasdaq's trade reporting system. You must use T for all trade reporting messages. Trade reporting messages (35 =8) with "S" will be rejected.

- A connector ID is good for one and only one I1I2.
- The initial logon message is validated for both the sender comp ID (MPID) and the sender sub ID (I1I2).
- If logon fails, you will not receive a message indicating this failure.
- Subsequent administrative and application messages will validate the connector ID and I1I2.

### 3.3 Architecture

## 4 Message Formats

### 4.1 Standard Message Formats

All inbound and outbound messages will begin with a standard header and end with a standard footer.

#### 4.1.1 Inbound to Nasdaq Header Format

| Tag | Tag Name      | Req'd | Nasdaq Implementation                                                                                                                                                                                            |
|-----|---------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8   | BeginString   | Y     | Unencrypted, must be first field in the message.                                                                                                                                                                 |
| 9   | BodyLength    | Y     | Unencrypted, must be second field in the message.                                                                                                                                                                |
| 34  | MsgSeqNum     | Y     | Integer message sequence number.                                                                                                                                                                                 |
| 35  | MsgType       | Y     | Unencrypted, must be third field in the message.<br>Valid value:<br>8 = Execution Report                                                                                                                         |
| 43  | PossDupFlag   | N     | Required for retransmissions. Indicates possible retransmission of message with this sequence number. Valid values:<br>Y = Possible duplicate<br>N = Original transmission                                       |
| 49  | SenderCompID  | Y     | Your 4-character ID assigned by Nasdaq as part of your Nasdaq connectivity.                                                                                                                                      |

| 10  | Checksum   | Y     | 3-character end-of-message delimiter that represents the total number of bytes in this message. Unencrypted, must be last field in message. |

## 4.2 Administrative Messages

### 4.2.1 Heartbeat

| Tag | Field Name              | Req'd | Comments                                                                                                             |
|-----|-------------------------|-------|----------------------------------------------------------------------------------------------------------------------|
|     | <i>Standard Header</i>  | Y     | MsgType = 0                                                                                                          |
| 112 | TestReqID               | N     | Required when the heartbeat is in response to a Test Request. It is the TestReqID received from TestRequest message. |
|     | <i>Standard Trailer</i> | Y     |                                                                                                                      |

### 4.2.2 Logon

After establishing your TCP connection with Nasdaq FIX, a Logon must be the first message that you send. Nasdaq will respond with its own Logon. You must wait for that Logon before sending additional messages.

| Tag | Field Name              | Req'd | Comments                                             |
|-----|-------------------------|-------|------------------------------------------------------|
|     | <i>Standard Header</i>  | Y     | MsgType = A                                          |
| 95  | RawDataLength           | N     |                                                      |
| 96  | RawData                 | N     |                                                      |
| 98  | EncryptMethod           | Y     | Must be 0.                                           |
| 108 | HeartBtInt              | Y     | Nasdaq recommends an interval between 30-60 seconds. |
|     | <i>Standard Trailer</i> | Y     |                                                      |

### 4.2.3 Test Request

The HeartBtInt that is specified in the Logon message will be used to make sure that the customer is alive and functioning. If Nasdaq detects inactivity for a period longer than the HeartBtInt + 1 second, it will send a Test Request to determine if the customer is still active. If after another HeartBtInt, there is still no activity, Nasdaq will send another test request. If after this additional HeartBtInt there is still no activity, Nasdaq will immediately send a logout message and the

connection will be closed. It is expected that similar logic will be used on the customer's side in order to detect host activity.

| Tag | Field Name              | Req'd | Comments              |
|-----|-------------------------|-------|-----------------------|
|     | <i>Standard Header</i>  | Y     | MsgType = 1           |

|     | <i>Standard Header</i>  | Y     | MsgType = 4                   |
| 36  | NewSeqNum               | Y     | Next expected sequence number |
| 123 | GapFillFlag             | N     |                               |
|     | <i>Standard Trailer</i> | Y     |                               |

#### 4.2.6 Logout

Logouts will occur as a normal end of day routine but may also occur as a result of inactivity. It is the customer's responsibility to logout prior to 5:00 p.m. each trading day.

## 4.3 Application Messages

### 4.3.1 Inbound to Nasdaq

#### 4.3.1.1 Entry

Firms use an Entry message to enter either a same-day (T) or an as-of (T+n) trade. In tag 452, PartyRole, you will indicate whether you are the executing party or the contra party. After an initial trade is entered, the contra party may accept a trade entry via an accept message or by entering its version of the trade using this message.

The entry message initiates the M1 trade matching process. This process matches trade reporting firm entries with contra firm entries, which results in a locked-in trade. These entries are matched one-to-one and must, therefore, have identical information in order to be matched. Entries by Automatic Give-Up (AGU) firms and Qualified Special Representatives (QSR) represent trades that are already locked in and, therefore, do not require acceptance or match processing. AGU and QSR relationships are pre-established. Tag 577 identifies firms as AGU or QSR. See Scenario [6.1](#) and [6.3](#).

A trade entry may be designated for trade reporting only, for trade clearing only, for both trade reporting and clearing, or for regulatory reporting only (non-tape, non-clearing). If tag 852 contains a Y, this entry will be processed for tape reporting if it is a T-date trade. It will be processed for Form T if it is a T+n trade.

Because of the number of transactions that it handles, the trade reporting system does not maintain transactions from previous business days unless the transaction was clearing eligible and remains in an open status. As such, firms are not able to cancel a transaction that was locked-in or was submitted for tape-only from a previous date. Firms use a reversal transaction to offset the previous entry. The same sides of the market, i.e., the buy and sell sides, should appear on both the original trade report and the reversal report. This entry message is used for that purpose.

For Example:

If the original trade report reflects Firm A on the sell side and Firm B on the buy side, the reversal report should also reflect Firm A on the sell side and Firm B on the buy side.

For Reg NMS, we are adding a new message format. Users can use either message format **during the transition period**, but once Reg NMS is fully rolled-out, users must use the Reg NMS format which in this spec, follows the Pre-Reg NMS format.

See the scenarios in section 6 for related outbound messages.

### Message Format for Reg NMS

Changes include the addition of a mandatory tag 829, and expansion of tag 277 to allow for multiple values. Additional values have been added to tag 277.

Optional tags 275, 527, 9277, 9278, and 9860 were added in version 2008-02 for expanded REG-NMS message format. These tags may be sent only if tag 452 (Party Role) is "7" Executing Firm. If any of these optional tags are present individually or in combination the system will process the message in the expanded format and as an Executing Firm submission.

Reversal Trades will now require 3 new tags. When 700 is flagged to either "Y" or "K", firms will be required to populate tags 880 (TrdMatchID), 22012 (OrigControlDate), and 22029 (RefReportingFacility) on Entry message. Reversals will be validated on the following criteria:

- Original control date
- Original control #
- Security
- Executing party (unless give-up is present. The give-up MPID will be used if entered)
- Trade Date
- Trade status of the original trade
- Execution Time

If the validation criterion above fails, the reversal will be rejected.

Please Note:

- All trade details must match the original trade.
- Timestamps of reversals must match the original trade down to the nanosecond.
- Reversals must be entered using the same party role as the original trade. If the original trade was entered as "executing party" trade, then the reversal must also be entered as "execution party". If the reversal is entered as a contra party reversal, the reversal would be rejected.

Firms that choose to transact in fractional shares will be required to report both the Quantity (in full integer value) and the new FractionalShareQty fields. FractionalShareQty will allow up to 15 characters inclusive of a floating decimal, with up to 8 digits maximum before the decimal, and up to 6 digits may be used after the decimal on inbound and outbound messages (format: nnnnnnnn.nnnnnn). Tag 22037 is added in version 2025-01 [and is supported starting February 23, 2026](#). Note: NSCC is not supporting clearing of fractional share quantity at this time.

**Note: On Trade Entry Notification and Entry Notification messages back to firms, the Original Control Number entered in tag 880 will be sent back in tag 881.**

#### **4.3.1.2 Accept, Break, Cancel, Decline, Error**

Instead of sending in its version of the trade via an entry message, the contra party uses an Accept (Function A) message to accept a trade entry and enter into a locked-in trade. Using this message prevents the M1 match process from initiating. By accepting a trade entry, the contra party confirms and agrees to the terms of the trade. See section [6.1](#) for related outbound messages.

Both executing and contra parties may enter a Break (Function B) message to break a locked-in trade. A locked-in trade will be broken only after both the executing party and the contra party have submitted this message. When one party submits this message, cancel messages are disseminated to both parties. This alerts the other party to send in a break trade message. Once a trade has been broken, further trade reconciliation action is prevented, and the trade will be deleted at the end of the entry day. See section [6.7](#) for related outbound messages.

Both executing and contra parties may use the Cancel (Function C) message to cancel a previously reported trade that is not yet locked-in. A QSR firm may, however, cancel a QSR locked-in trade. If the trade is already locked in, firms must use the Break function. If the executing party enters a cancel trade message for a disseminated TRADE REPORTING 1 (T-day) entry, a cancel trade report will be sent to the tape. If the trade was entered in TRADE REPORTING 2 (T+n), this message will act like an error message. If the contra party enters a cancel trade message, the trade will not be processed for clearing. A cancel trade report will not be sent to the tape. All canceled trades will be deleted at the end of the entry day. See section [6.9](#) for related outbound messages.

The contra party or executing party may use the Decline (Function D) message to decline or reject a trade entry because of a disagreement with the terms of the trade. Declined trades will be assigned status "D". However the contra party is still allowed to accept the transaction. Please note:

- Declined trades shall carryover to the next day and be eligible to be Accepted.
- Trades T+22 and older will carryover to the next day and be eligible for match/compare, Accept, or Decline.
  - These trades will not be included in the Auto-lock process

The executing party may use an Error (Function E) message to cancel a previously entered trade that was reported today, but never actually took place. If the trade is already locked in, the executing party must use the Break function. If the original trade was same-day and reported to the tape, then the error will be reported to the tape. If the original trade was not same-day, then the error will not be reported as an error to the tape, but the trade will be marked as an error. Nasdaq will forward a TCER message to both the executing party and contra party to advise them that the specified trade

is updated to Error status. Nasdaq will not match errored trades, allow acceptance of errored trades, forward the trade to clearing, or keep it on record after the end of the entry day. See section [6.11](#) for related outbound messages.

### **4.3.2 Outbound from Nasdaq**

Acknowledgement messages (ACKs) are sent only to the originator of an inbound message. All other parties associated with the trade receive unsolicited messages (UMs).

For all UMs, tag 571 is a unique, Nasdaq-defined number. For all ACKs, tag 571 is an echo of the unique, customer-defined number sent in the inbound message.

For all UMs, tags 11, 17, and 37 will not be returned. For all ACKs, tags 11, 17, and 37 will be returned. In this way, only executing parties receive an echo of their IDs, i.e. contra parties and clearing firms do not receive the executing party's reference numbers.

Firms may add/ delete/ modify outbound FIX message types and/ or verify their Outbound Message configurations(s) (detailed in tag 58) by reaching out to [Subscriber@nasdaq.com](mailto:Subscriber@nasdaq.com).

- **TRF Acknowledgement and Drop Copy Options:**

- **TRF Entry**
- **TRF Alleges**
- **TRF Locks**
- **TRF Breaks**
- **TRF Cancels**
- **TRF DeclineTRF Errors**
- **TRF Clearing Updates**
- **TRF Clearing Notifications**
- **TRF Give Up Notifications**

#### 4.3.2.1 Trade Entry Notification Message Format TYEN/CYEN

When a firm submits an expanded ACT EP trade entry and Nasdaq accepts that entry, a TYEN will be forwarded to the originator. If the executing party is a correspondent of a clearing firm and the clearing firm has elected to receive clearing correspondent messages, a CYEN will be forwarded to the specified clearing firm.

Clients may elect to receive a version 2 format (TYEN/CYEN) containing additional fields, as noted below.

##### Expanded Reg NMS Format

#### 4.3.2.2 Entry Notification to Alleged Firm Message Format TYAL/CYAL

When a firm enters an expanded Reg NMS compliant trade entry and Nasdaq accepts the entry, a TYAL will be forwarded to the contra party. If the contra party is a correspondent of a clearing firm and the clearing firm is elected to receive clearing correspondent messages, a CYAL with identical contents of the TYAL will be forwarded to the specified clearing firm.

Clients may elect to receive a version 2 format (TYAL/CYAL) containing additional fields, as noted below.

##### Expanded Reg NMS Message Format:

| Tag | Tag Name               | Req'd | Description                                                                                                                                                                                     |

#### 4.3.2.3 Locked-in Notification TCLK/CCLK or TGLK/CGLK

If a trade is accepted by the contra party or if the trade is matched from both sides' entries, then the trade is considered locked-in. If an executing party is locked-in by contra party acceptance or by M1 trade matching, this message will be forwarded to both parties. Because Nasdaq will match buy and sell entries regardless of who entered them, the TCLK message will transmit buy/sell control numbers. CCLK messages will be sent to the appropriate clearing firms.

##### Message Format if Locked-in by Acceptance or Midday Lock of Carryover Trades

#### 4.3.2.4 Break Notification TCBK/CCBK

This message notifies the contra party that a executing party or contra party has entered a break entry. If this message is used to break a locked-in trade, this message will be forwarded to both buyer and seller. Because Nasdaq will match buy and sell entries regardless of who entered them, the TCLK and TCBK messages will transmit buy/sell control numbers. CCBK messages will be sent to the appropriate clearing firms.

#### 4.3.2.8 Participant Authorization Indicator Message TCPI

At the start of day, Nasdaq sends this message to communicate all current clearing arrangements. You will receive one message for each relationship. This information can also be accessed via trader.

In addition to start of day messages, intraday messages will be sent to you when:

- a record (relationship) is added; and
- a record (relationship) is deleted.

Trader will be updated to reflect these intraday changes.

#### Message Format

#### 4.3.2.9 Post Trade Risk Trade Notification TCBT/CCBT/TCST/CCST

Post Trade Risk uses TCBT/CCBT messages for aggregate held / killed trade notifications. Aggregate limits are compared with daily risk aggregated activity based on their notional dollar volumes on buy / sell or net trade basis as defined by the clearing firm. Aggregate Hold Limits may be configured for each correspondent by the clearing firm and trades are monitored according to Post Trade Risk Data Sources as defined by the clearing firm. Data Sources may include one or more of the following: FINRA/Nasdaq TRF Carteret, FINRA/Nasdaq TRF Chicago, Nasdaq Stock Market, Nasdaq ~~BX~~Texas, Nasdaq PSX and trades that are sent to Nasdaq's router, RASH.

Following the aggregate hold breach, the default hold action will be applied to held trades at the end of the 15-minute hold period if no explicit trade action is taken by the clearing firm. If the clearing firm defines 'Allow' default action, the clearing firm will be alerted and then following the 15-minute period, the held trade will be released. If the clearing firm sets Inhibit Default Action, the held trade will be killed following the 15-minute period. Firms will be notified for each trade's risk status change.

Post Trade Risk uses TCST / CCST for material per trade breach alerts as defined by the correspondent clearing firm. The default hold action will be applied to held trades at the end of the 15-minute hold period if no explicit trade action is taken by the clearing firm. If the clearing firm defines 'Allow' default action, the clearing firm will be alerted and then following the 15-minute period, the held trade will be released. If the clearing firm sets Inhibit Default Action, the held trade will be killed following the 15-minute period.

Notifications are available to participants on the trade, including Give up Parties, if applicable, as well as correspondent clearing firms.

Post Trade Risk uses the same message format as ACT Risk Management for TCBT/ CCBT / TCST and CCST messages, but Tag 856 (TradeReportType) values have been redefined.

#### Message Format

| Tag | Tag Name               | Req'd | Description  |

## 5 Reject Messages

Rejects fall into one of three categories: session, business, and application.

| Type        | Number    |
|-------------|-----------|
| Session     | 0001-0199 |
| Business    | 0200-0999 |
| Application | 4000      |

### 5.1 Session

Sometimes, messages that are inbound to Nasdaq FIX are rejected directly, resulting in session level rejects. In these cases, you will receive a reject message (35=3) that includes the reject reason (tag 373) and detailed, specific causes of the reject (tag 58).

| Tag | Field Name             | Req'd | Comments                                                                                                                                                                                       |
|-----|------------------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | <i>Standard Header</i> |       | MsgType = 3                                                                                                                                                                                    |

| 0012 Invalid value for MsgType tag             |

## 5.2 Business

Messages can also be rejected when tag content validation fails, resulting in business level rejects. In these cases, you will receive a reject message (35=8) that includes the reject reason (tag 751), a detailed, specific cause of the reject (tag 58), and a trade report status of rejected (tag 939 = 1).

| Tag | Field Name             | Req'd | Comments                                                                                                                                                                                  |

### 5.3 Application

Messages can also be rejected by the application. In these cases, you will receive a rejected message (35=8) that includes the reject reason (tag 751), a detailed, specific cause for the rejection (tag 58) which will include the category and a description, and a trade report status of rejected (tag 939 = 1). Except for the category of Session level rejects, these rejection messages can be included on the customer's drop port connections.

## 6 Appendix A: Message Flow Scenarios

Because `MsgType = 8` is being used for all submissions, tag 856, `TradeReportType`, is used to identify message type. The scenarios below not only provide an overview of message flow, but also provide the values you should expect in tag 856.

Tag 856, `TradeReportType`:

- 0 = submit
- 1 = alleged
- 2 = accept
- 3 = decline
- 4 = addendum
- 6 = trade report cancel
- 7 = locked-in trade break
- 8 = error

### 6.1 Cross Trades

| You enter this...                      | you get this in response... |  | your clearing firm gets this... |  |
|----------------------------------------|-----------------------------|--|---------------------------------|--|
| Trade Entry<br>(Function V)<br>856 = 0 | TTEN<br>856 = 0             |  | CTEN<br>856 = 0                 |  |

## 6.2 QSR Submitted Trades

| You (AGU or QSR) enter this...         | you get this in response... | contra firm gets this... | your clearing firm gets this... | contra's clearing firm gets this... |
|----------------------------------------|-----------------------------|--------------------------|---------------------------------|-------------------------------------|
| Trade Entry<br>(Function V)<br>856 = 0 | TTEN<br>856 = 0             | TTAL*<br>856 = 1         | CTEN*<br>856 = 0                | CTAL*<br>856 = 1                    |

\*returned with a status of locked-in

## 6.3 AGU Submitted Trades

| You (AGU or QSR) enter this...         | you get this in response... | contra firm gets this... | your clearing firm gets this... | contra's clearing firm gets this... |
|----------------------------------------|-----------------------------|--------------------------|---------------------------------|-------------------------------------|
