1 Introduction

The OTC Link ECN allows subscribers to submit non-attributable orders that will provide and remove liquidity on the ECN's order book for OTCQX, OTCQB and OTC Pink securities.

This OTC FIX gateway service utilizes the FIX 4.2 protocol standard as defined by www.fixprotocol.org, with some exclusive custom extensions.

Connection to the OTC FIX gateway is typically made through one or more extranet vendors. Please contact techsupport@otcmarkets.com for latest connectivity information.

OTC FIX gateways are configured to talk to a single service per port. Customers who wish to send and receive messages for different services should contact OTC Markets to provision at least one port for every service.

If the connection to an OTC FIX session is lost and reestablished later in the day, OTC will deliver all the queued outbound traffic that would have been received if the connection had not been lost. However, when a connection is initially established, even if it's later in the day, only messages generated from time of connection will be delivered. I.e., Messages queued prior to initial connection will not be delivered.

2 Business Rules

2.1 Hours of Operation

A regular Day order (DAY) is only executable during the normal trading session, 9:30am to 4:00pm. During shortened market trading days, a DAY order will be executable between 9:30am and 1:00pm.

DAY orders can be entered starting at 6:00am. DAY orders received prior to 9:30am are held and processed at 9:30am. All DAY orders received after normal operating hours are rejected.

An extended Day order (GTX; a.k.a. DAYX) and a modified Good Till Cancel order (GTC) will be executable within selected P1, P2 and P3 trading sessions from 8:00am to 5:00pm. During shortened market trading days, the operating hours for GTX and GTC orders will be from 8:00am to 2:00pm.

GTX and GTC orders can be entered starting at 6:00am. GTX and GTC orders received prior to 8:00am are held and processed at 8:00am. All GTX or GTC orders received after extended operating hours are rejected.

DAY orders expire at the end of the normal trading session. GTX orders expire at the end of the extended trading session. Both will include tags 39 & 150 = 3 in their respective execution reports. GTC orders are canceled by the system at the end of the extended trading session. It will include tags 39 & 150 = 4 in its execution report.

When an order contains TIF tag 59 = 5 (GTX) or 1 (GTC), the following trading sessions can be selected:

- P2: Order active between 9:30am and 4:00pm (essentially the same as TIF tag 59 = 0 [DAY], expires at 4:00pm).
- P1 plus P2: Order active between 8:00am and 4:00pm (expires at 4:00pm).
- P2 plus P3: Order active between 9:30am and 5:00pm (expires at 5:00pm).

- P1 plus P2 plus P3 or no sessions specified: Order active between 8:00am and 5:00pm.

Note: P1 or P3 alone, as well as P1 plus P3 are not allowed and will be rejected.

IOC orders will match anytime during the full extended day (i.e., 8:00am to 5:00pm).

An On Close (OC) order (a.k.a. At the Close) is only executable at 4:00pm. During shortened market trading days, an OC order will be executable at 1:00pm. OC orders can be entered starting at 6:00am and expire at the end of the normal trading session.

2.2 Data Types

2.2.1 Timestamps

All FIX timestamps are in UTC format as per the FIX standard format YYYYMMDD-HH:MM:SS.sss; where sss = milliseconds. Members are expected to synchronize their clocks with an external time source.

2.2.2 Price

Order entry price precision is limited to up to 2 decimal places when priced $\geq$ \$1.00, and up to 4 decimal places when priced $<$ \$1.00. However, since orders can execute at a midpoint, executions can occur at 3 decimal places when priced $\geq$ \$1.00, and at 5 decimal places when priced $<$ \$1.00.

2.2.3 Market Orders (not be available until a TBD future date)

Market orders (Tag 40 = 1) are only allowed for On Close orders (i.e., Market On Close, MOC). DAY, GTX, GTC or IOC orders entered without a limit price will be rejected.

2.3 On Close Time In Force

For securities enabled for the Closing Cross Auction, orders can optionally include the On Close order TIF Tag 59 = '7' (At the Close).

A Limit On Close (LOC) order will be designated by the 'TimeInForce' (TIF); FIX tag 59 = 7, 'OrdType' FIX tag 40 = 2 (Limit) and a price in 'Price' FIX tag 44. LOC orders can be entered starting at the same time as DAY and extended DAY orders. At a configurable time before market close, e.g., 10 mins (typically 3:50pm), LOC orders will not be allowed to be modified or canceled. After another configurable time, e.g., 2 mins (typically 3:58 pm), they can no longer be entered.

A Market On Close (MOC) order will be designated by the 'TimeInForce' (TIF); FIX tag 59 = 7 and 'OrdType' FIX tag 40 = 1 (Market). Any entered price will be ignored. MOC orders can be entered starting at the same time as DAY and extended DAY orders. At the same configurable time before market close as LOC orders, e.g., 10 mins (typically 3:50pm), MOC orders will not be allowed to be modified or canceled. After another configurable time, different than LOC, e.g. 5 mins (typically 3:55 pm), they can no longer be entered.

An Imbalance Only (IO) order will be designated by the 'TimeInForce' (TIF); FIX tag 59 = 7, 'OrdType' FIX tag 40 = 2 (Limit), a price in 'Price' FIX tag 44 and 'ExecInst' FIX tag 18 = 'i' (Imbalance Only). IO orders cannot be entered at market price. IO orders can be entered starting at the same time as DAY and extended DAY orders and up through market close at 4:00pm. At the same configurable time before market close as LOC orders, e.g., 10 mins (typically 3:50pm), IO orders will not be allowed to be modified

or canceled. At market close, and for the purposes of disseminated price values, any IO order priced more aggressive than its same-side inside (based on the CBBO) will be repriced to that inside price.

2.4 Closing Cross Auction Opt Out

Subscribers can choose to have their posted DAY, GTX and GTC orders not participate in the Closing Cross Auction, by including 'ExecInst' FIX tag 18 = 'A' (No Cross). DAY, GTX and GTC orders with this ExecInst will not participate in the Closing Cross Auction at 4:00pm, nor will they be included in the Closing Cross Auction dissemination feed. This ExecInst will be ignored, if included on LOC or MOC orders.

2.5 Self Trade Prevention

Self trade prevention (a.k.a. anti-internalization) can be enabled on an order basis, with execution instruction Tag 18 = 'a' and optionally NoSelfTrade Tag 7928. Firms can optionally be configured for self trade prevention for all their orders across the board, or just all their orders on a given FIX session.

If the firm is configured for self trade prevention for all their orders across the board, or just all their orders on a given FIX session, Tag 18 = 'a' does not need to be entered on any orders and will be ignored. If the firm is NOT configured for self trade prevention for all their orders across the board, or just all their orders on a given FIX session, Tag 18 = 'a' is required on both the resting and incoming orders. If only one or neither order includes Tag 18 = 'a', the orders can match.

When enabled on the firm or FIX session level, or when both the resting and incoming orders have Tag 18 = a and the incoming order has either no Tag 7928 or Tag 7928 = D (Cancel Smaller/Decrement Larger), the following cancel / reduce method will be used:

- If the size of the incoming order is less than the resting order, the incoming order will be canceled, and the resting order will be reduced by the size of the canceled incoming order.
- If the size of the incoming order is greater than the resting order, the resting order will be canceled, and the incoming order will be reduced by the size of the canceled resting order.
- If the size of the incoming order is the same as the resting order, both the incoming order and the resting order will be canceled.

When an order is reduced due to self trade prevention, the subscriber will receive a Restatement execution report (tag 150 = D, tag 378 = 5).

When both the resting and incoming orders have Tag 18 = a and the incoming order has Tag 7928 = N (Cancel Newest), just the incoming order will be canceled.

When both the resting and incoming orders have Tag 18 = a and the incoming order has Tag 7928 = O (Cancel Oldest), just the resting order will be canceled.

When both the resting and incoming orders have Tag 18 = a and the incoming order has Tag 7928 = C (Cancel Both), both the incoming order and the resting order will be canceled.

2.6 Route to External Marketplaces

If at time of order entry, an external marketplace has a superior price to a resting OTC Link ECN order, a marketable incoming order enabled for routing will be routed to the external marketplace. Routing functionality will route the full quantity of the order. The price will be the external marketplace's Top of Book price.

Typically, routing to external marketplaces only occurs during the normal trading session. Orders can optionally include the Route Outside Normal Market Hours execution instruction Tag 18 = 'n'. When included on a GTX or GTC order, the order can also route during the extended trading sessions.

2.7 Intermarket Sweep Orders (ISO)

Orders can optionally include the ISO execution instruction Tag 18 = 'f'. ISO orders will not be routed to external marketplaces, and can trade through those marketplaces. ISO conveys that the firm has taken responsibility for sending orders directly to the external marketplaces to access their better priced liquidity. ISO orders cannot trade through posted OTC Link ECN orders.

Since an ISO order is treated as IOC, TIF 59 will be superseded by the ISO execution instruction. With the exception of the Route ISO or Ping ISO execution instruction, the ISO execution instruction supersedes all other execution instructions.

If the order also includes the Route ISO or Ping ISO execution instruction, the ISO Tag 18 = 'f' is ignored.

2.8 External Routing Not Allowed

Orders can optionally include the External Routing Not Allowed execution instruction Tag 18 = 'h'. These orders will not route to OTC Link ATS or an external IDQS. The absence of this tag means routing is allowed. If an order with Tag 18 = 'h' is marketable with OTC Link ATS or an external IDQS on entry, or later becomes marketable, it will be canceled.

2.9 Route ISO

Orders can optionally include the Route ISO execution instruction Tag 18 = 'o'. Like ISO orders, Route ISO orders can internally trade through external marketplaces. But unlike ISO orders, after internal trades, any remaining quantity can route to external marketplaces. If quantity remains after routing, IOC orders will be canceled; DAY/GTX/GTC orders will post.

2.10 Ping ISO

Orders can optionally include the Ping ISO execution instruction Tag 18 = 'p'. Ping ISO orders work exactly like Route ISO orders, except before routing to OTC Link ATS, they will ping Global OTC at the order's limit price.

2.11 Route IOC

Typically, IOC orders cannot be routed to OTC Link ATS or an external IDQS. However, orders can optionally include either the Route IOC execution instruction Tag 18 = 'r' or the Route IOC to OTC Link ATS Only execution instruction Tag 18 = 'l' (lowercase L).

2.12 IOC after Cancel / Replace

Orders can optionally include the IOC after Cancel / Replace execution instruction Tag 18 = 'x'. If included, the cancel / replaced order will be treated as if its TIF was IOC. After any internal executions, the remaining quantity will be canceled back.

2.13 Peg Order Type

Orders can optionally include the Pegged order type Tag 40 = 'P' and either the Midpoint Peg execution instruction Tag 18 = 'M' or Primary Peg execution instruction Tag 18 = 'R'. Midpoint Peg orders will post hidden at the midpoint of the consolidated best bid and offer (CBBO). Primary Peg buy orders can be displayed or hidden and post at the bid of the CBBO. Primary Peg sell orders can be displayed or hidden and post at the offer of the CBBO.

2.14 Post Only on Order Entry

Orders can optionally include the Post Only on Order Entry execution instruction Tag 18 = '6'. When these orders are entered during the active trading session, they will not remove liquidity (i.e., match against posted OTC Link ECN orders or routed to OTC Link ATS or external IDQS quotes) at the time the order is entered. They can only post to OTC Link ECN. After the orders post, they can later remove liquidity due to changes in the market.

Note this slightly modifies the traditional Post Only or Participate Don't Initiate Tag 18 = 6, which prohibits the order from ever removing liquidity.

2.15 Allow Price Sliding

Orders can optionally include the Allow Price Sliding execution instruction Tag 18 = 'S'. These orders will behave like 'Post Only on Order Entry' orders, but will be displayed one tick¹ away from the opposite inside (i.e., one tick higher than the CBB for a sell order or one tick lower than the CBO for a buy order), if its limit price L/C's the opposite CBBO inside.

2.16 Fully Hidden Orders

Orders can optionally include MaxFloor = 0. These orders will be processed the same as normal limit orders, until they are posted to the order book. Once posted, they will have no displayed size and will not contribute to the OTC Link ECN quote.

2.17 Unsolicited Order

In order to quote in securities that are not Piggy Back Qualified in OTC Link ATS, orders in those securities must be indicated as unsolicited; UnsolicitedFlag Tag 9534 must be 'Y'. If Tag 9534 is not set to Y, the order will be treated as fully hidden.

¹ One tick = 0.0001, when inside price < \$1.00. One tick = 0.01, when inside price >= \$1.00.

When the new SEC rule 15c2-11 rules take effect, unsolicited orders (tag 9534 = 'Y') in securities without current 211 information will require the NonAffiliateFlag (Tag 9535) be set to 'Y'. If Tag 9535 is not set to Y, the order will be treated as fully hidden.

2.18 When to Refresh a Reserve Order

Orders that include a non-zero MaxFloor value in Tag 111 (i.e., reserve orders) can optionally include custom RefreshBelowShow Tag 9111 to indicate when to refresh a reserve order. When set to 'Y', the order will be refreshed to its entered MaxFloor when its display size drops below MaxFloor. When set to 'N', the order will be refreshed to its entered MaxFloor when its display size drops below minimum quote size (which can be less than or equal to MaxFloor).

2.19 Cancel / Replace and Partial Cancel

DAY orders can be modified after they are posted to the book. Currently, only order price, quantity and MaxFloor can be modified.

Any modification will cause order to lose time priority. This will be considered a cancel / replace from an OATS perspective (i.e., a CR OATS record will be recorded).

2.20 Bulk Cancel

Subscribers can cancel orders in bulk for either a single security or all securities by entering OrderID Tag 37 = -999. If the symbol is included in the cancel message, only orders in that symbol will be canceled. If no symbol is included, all the subscriber's orders will be canceled. Individual out messages will be sent to the subscriber for each order canceled.

2.21 Liquidity Indicator

On Partial and Full fill execution reports, LiquidityIndicator Tag 9730 will indicate if subscriber added or removed liquidity on the execution.

2.22 Erroneous Price Check

OTC Link ECN provides a risk control that rejects a Limit order that is priced a percentage through the opposite inside (please contact tradingservices@otcmarkets.com for price percentage details). Orders can optionally include the Ignore Erroneous Price Check execution instruction Tag 18 = 'c'. These orders will not be rejected for being priced a percentage through the opposite inside.

3 FIX Messages

3.1 Logon Session Profile

A FIX session includes a client feature profile utilizing Tags 95 and 96 to the Logon Message. Utilizing this profile, subscribers can enable and disable session cancel on disconnect.

Tag ID	Description	Values
95	Number of Feature Position Fields to Read	1
96	Cancel on Disconnect	Valid values: 0 = Do not enable Cancel on Disconnect for the session 1 = Enable Cancel on Disconnect for the session

3.2 Standard Message Header

Tag ID	Tag Name	Required	Description
8	BeginString	Yes	FIX.4.2 Must be first field in message.
9	BodyLength	Yes	Length of message following BodyLength field up to and including the delimiter preceding the CheckSum field. Must be second field in message.
34	MesSeqNum	Yes	Sequential sequence number for session.
35	MsgType	Yes	Must be third field in message. 0 = HeartBeat 1 = TestRequest 2 = Resend/Request 3 = Reject 4 = SequenceReset 5 = Logout 8 = ExecutionReport 9 = OrderCancelReject A = Logon D = NewOrderSingle F = OrderCancelRequest G = OrderCancelReplaceRequest
49	SenderCompID	Yes	Standard FIX session IDs. Assigned per-connection
56	TargetCompID	Yes	Standard FIX session IDs. Assigned per-connection
52	SendingTime	Yes	Time in UTC format YYYYMMDD-HH:MM:SS.sss; where sss = milliseconds
115	OnBehalfOfCompID	Yes	NSSC MPID identifying the client sending order
116	OnBehalfOfSubID	No	Trader sending message
128	DeliverToCompID	Yes	Identifies subscriber on messages from OTC Link ECN, and 'OTCX' on messages to OTC Link ECN.
129	DeliverToSubID	No	Identifies trader on messages from OTC Link ECN.

3.3 Standard Message Trailer

Tag ID	Tag Name	Description
10	Checksum	Modulo 256 checksum of all characters in message up to and including the delimiter preceding the CheckSum field. Three digits with leading zeroes if necessary.

3.4 Automatic Cancel on Disconnect

A FIX session can be configured to automatically cancel all open orders when a disconnect is detected between your firm and the OTC Link ECN. Note that orders executed just prior to the disconnect will not

be fully canceled. Execution Reports for executed orders and automatically canceled orders will be available upon reconnection.

3.5 Service Bureau Configuration

Service Bureaus require special configuration. OnBehalfOfCompld must be set for New Order, Cancel and Cancel/Replace messages sent to OTC Link ECN. Orders with an unknown OnBehalfOfCompld will be rejected. ClOrdId values are required to be unique only within a given OnBehalfOfCompld. Execution Report and Cancel Reject messages sent by OTC Link ECN will have the DeliverToCompld set. Orders must be cancelled or replaced using the same OnBehalfOfCompld as was sent on the Order.

3.6 FIX Session Throttle

In order to ensure a session provides more predictable performance, while also preventing it from affecting the performance of other sessions on the same gateway, a session can be configured to throttle inbound messages; typically, 1000 total inbound messages read per second.

After the 1000th message is received within a rolling 1 second, any subsequent message is buffered until that second is completed. The application then sequentially processes queued messages, carrying over to further seconds every additional 1000 messages in the buffer. In this manner, if 5001 messages are sent to the port in under a second, the last one will not be processed by the gateway until the 5th second.

Outbound message rate from the gateway is not inhibited.

3.7 Messages Submitted to OTC Link ECN

3.7.1 New Order Single

A New Order is initiated by sending a FIX NewOrder (35=D) message to the OTC Link ECN.

Tag ID	Tag Name	Required	Description
35	MsgType	Yes	Should be "D"
1	Account	No	Reflected back on Execution Reports associated with this order. Can be used for clearing, max 40 characters.
11	ClOrdID	Yes	Unique for all orders sent today, max 40 characters.
18	ExecInst *	No	Valid values (space delimited): 1 = Not Held (accepted, but not processed) f = ISO h = External Routing Not Allowed 6 = Post Only on Order Entry M = Midpoint Peg (requires 40 = P) R = Primary Peg (requires 40 = P) r = Route IOC l (lowercase L) = Route IOC to OTC Link ATS Only a = Self Trade Prevention c = Ignore Erroneous Price Check o = Route ISO p = Ping ISO n = Route Outside Normal Market Hours S = Allow Price Sliding

OTC Link ECN FIX Specification 1.3.31

			x = IOC after Cancel / Replace A = No Cross i = Imbalance Only LOC order (requires 59 = 7 and 40 = 2) If tag 18 is blank or absent, a marketable order with a TIF of Day can remove liquidity on entry by either matching a posted ECN order, or routing out to OTC Link ATS or external IDQS quotes.
38	OrderQty	Yes	Number of shares, max value of 99,999,999
40	OrdType	Yes	Valid value: 1 = Market (requires 59 = 7) 2 = Limit P = Pegged (requires 18 = M or R)
44	Price	Yes	Price of order, max allowed price of \$99,999,999
47	OrderCapacity	Yes	Valid values: A = Agency P = Principal R = Riskless Principal
54	Side	Yes	Valid values: 1 = Buy 2 = Sell 5 = Sell short
55	Symbol	Yes	This field must contain a valid symbol in upper case lettering, max 14 characters.
59	TimeInForce	No	Valid values: 0 = Day (Default) 3 = IOC** 5 = GTX 1 = GTC 7 = At the Close (OC)
111	MaxFloor	No	Portion of OrderQty to display. The balance is reserve. Zero indicates the order is fully hidden. Non-zero MaxFloor must be >= minimum quote size.
114	LocateReqd	No	Valid values: Y = Yes N = No Required to be N for sell short orders. Rejected if Y or absent.
386	NoTradingSessions ***	No	1, 2 or 3 [Must come before 336 Tag(s). Will be ignored if tag 59 not = GTX or GTC.]
336	TradingSessionID *** (NOTE: REPEATING GROUP!)	No	P1 = 8:00am – 9:30am P2 = 9:30am – 4:00pm P3 = 4:00pm – 5:00pm
5700	LocateBroker	No	Locate MPID
7928	NoSelfTrade	No	Only applicable when 18 = a. Valid values: D = Cancel Smaller/Decrement Larger (Default) N = Cancel Newest O = Cancel Oldest C = Cancel Both

9111	RefreshBelowShow	No	Flag indicating when reserve order will refresh; below minimum quote size or below MaxFloor (Show size). Valid values: Y = Below MaxFloor N = Below Minimum Quote Size (Default)
9534	UnsolicitedFlag	No	Valid values: Y = Order is unsolicited N = Order is not unsolicited (Default)
9535	NonAffiliateFlag	No	Flag indicating unsolicited order is from a non-affiliate. Y = Unsolicited order is from a Non-Affiliate N = Unsolicited order is not from a Non-Affiliate (Default)

* Note: Since an ISO order is treated as IOC, TIF 59 will be superseded by the ISO execution instruction. The ISO ExecInst also supersedes all other execution instructions. Route ISO ExecInst supersedes Ping ISO.

** IOC orders will match anytime during the full extended day (i.e., 8:00am to 5:00pm).

*** Note: TIF 59 = 0 (Day) is essentially the same as 59 = 5 (GTX) or 1 (GTC) / 386 = 1 / 336 = P2. TIF 59 = 5 (GTX) or 1 (GTC) without tags 386 and 336 is the same as 386 = 3 / 336 = P1 P2 P3. If 386 = 2, any pair of P1, P2 and P3 will be allowed except P1 P3. P1 or P3 alone will be rejected. The order will start participating at the beginning of the first selected trading session. At the end of the last selected trading session, the order will expire.

3.7.2 Order Cancel Request

While an order is still open, a cancel order can be requested by sending a FIX CancelOrder (35=F) message to the OTC Link ECN. In addition to requirements for the standard FIX message header, only the following fields are used for an Order Cancel Request. Any other fields specified in the message are ignored.

Tag ID	Tag Name	Required	Description
35	MsgType	Yes	Should be "F"
1	Account	No	Used on MPID Bulk Cancel Only.
11	ClOrdID	Yes	This field contains the ID assigned to the message by your firm. A unique identifier, max 40 characters.
18	ExecInst	No	If sent, this value must match the original order.
37	OrderID	No	If present, the value must exactly match the OrderID OTC Link ECN assigns to the order. A value of -999 will indicate Bulk Cancel.
38	OrderQty	No	Ignored
40	OrdType	No	Ignored
41	OrigClOrdID	Yes	This value must match the ClOrdID of the order or replaced order being cancelled. This value is the ClOrdID of the most current successful change. If the order was not changed or replaced, then this will be the ClOrdID of the original order. This field is not required for Bulk Cancel requests.
44	Price	No	Ignored
47	OrderCapacity	No	Ignored
54	Side	No	Ignored

55	Symbol	No	If OrderID Tag 37 = -999, Symbol will indicate cancel only orders in that symbol. Leaving Symbol blank will cancel all orders in all symbols.
59	TimeInForce	No	Ignored
111	MaxFloor	No	Ignored
5700	LocateBroker	No	Ignored
7928	NoSelfTrade	No	Ignored
9111	RefreshBelowShow	No	Ignored
9534	UnsolicitedFlag	No	Ignored

3.7.3 Order Cancel / Replace Request

While an order is still open, a cancel / replace order can be requested by sending a FIX CancelReplaceOrder (35=G) message to the OTC Link ECN. In addition to requirements for the standard FIX message header, only the following fields are used for an Order Cancel/Replace (Change) Request. Any other fields specified in the message are ignored. Any change will cause order to lose time priority.

Tag ID	Tag Name	Required	Description
35	MsgType	Yes	Should be "G"
11	ClOrdID	Yes	This field contains the ID assigned to the message by your firm. A unique identifier, max 40 characters.
18	ExecInst	No	If sent, this value must match the original order. For pegged orders, this field must be populated with the same instructions as on the original order.
37	OrderID	No	If present, the value must exactly match the OrderID OTC Link ECN assigns to the order.
38	OrderQty	Yes	This value can be changed. Number of shares, max value of 99,999,999
40	OrdType	Yes	Must be the same as the original order.
41	OrigClOrdID	Yes	This value must match the ClOrdID of the order or replaced order being cancel / replaced. This value is the ClOrdID of the most current successful change. If the order was not changed or replaced, then this will be the ClOrdID of the original order.
44	Price	Yes	This value can be changed. Price of order, max allowed price of \$99,999,999
47	OrderCapacity	No	If sent, this value must match the original order.
54	Side	Yes	Must be the same as the original order.
55	Symbol	Yes	Must be the same as the original order.
59	TimeInForce	No	If sent, this value must match the original order.
111	MaxFloor	No	This value can be changed. Portion of OrderQty to display. The balance is reserve. Zero indicates the order is fully hidden. Non-zero MaxFloor must be >= minimum quote size
116	OnBehalfOfSubID	No	This value can be changed. Trader sending message.
386	NoTradingSessions	No	If sent, this value must match the original order.
336	TradingSessionID	No	If sent, this value must match the original order.
5700	LocateBroker	No	If sent, this value must match the original order.
7928	NoSelfTrade	No	If sent, this value must match the original order.
9111	RefreshBelowShow	No	If sent, this value must match the original order.
9534	UnsolicitedFlag	No	If sent, this value must match the original order.
9535	NonAffiliateFlag	No	If sent, this value must match the original order.

3.8 Messages Received from OTC Link ECN

3.8.1 Execution Report

The disposition of entered orders (e.g., acknowledgements, rejects, cancels, partial fills, fills, etc.) are returned from the OTC Link ECN using a FIX ExecutionReport (35 = 8) message. In addition to requirements for the standard FIX message header, the following fields will be specified on these messages.

Tag ID	Tag Name	Required	Description
35	MsgType	Yes	Will be "8"
1	Account	No	Echoed back from submitted. Can be used for clearing.
6	AvgPx	Yes	Indicates Average Price of fills on order
11	ClOrdID	Yes	Echoed back from submitted
14	CumQty	Yes	Cumulative quantity of shares executed for this order.
17	ExecID	Yes	Day-unique id of execution message assigned by the OTC Link ECN.
20	ExecTransType	Yes	Valid values: 0 = New
30	LastMkt	No	Required to be OTCX on Fills and Partial Fills
31	LastPx	No	Indicates price of this fill. Only required on Fills and Partial Fills.
32	LastShares	No	Quantity of shares traded on this fill (zero for non-fills). Only required on Fills and Partial Fills.
37	OrderID	Yes	Order ID assigned by the OTC Link ECN
38	OrderQty	Yes	Quantity of shares on original order.
39	OrdStatus	Yes	Current status of order. Valid values: 0 = New 1 = Partially Filled 2 = Filled 3 = DoneForDay 4 = Canceled 5 = Replaced 6 = Pending Cancel 8 = Rejected E = Pending Replace
40	OrdType	Yes	Valid values: 2 = Limit P = Pegged
41	OrigClOrdID	No	The ClOrdID of the order being cancelled, replaced or restated.
44	Price	Yes	Price of original order.
54	Side	Yes	Side of original order.
55	Symbol	Yes	Symbol of original order.
58	Text	Yes	If present, indicates reason for reject or cancel.
59	TimeInForce	No	TIF of original order
60	TransactTime	Yes	Date-time that transaction occurred in UTC format YYYYMMDD-HH:MM:SS.sss; where sss = milliseconds

111	MaxFloor	No	Portion of OrderQty to display. The balance is reserve.
150	ExecType	Yes	Type of last execution. Valid values: 0 = New 1 = Partially Filled 2 = Filled 3 = DoneForDay 4 = Canceled 5 = Replaced 6 = Pending Cancel 8 = Rejected D = Restated E = Pending Replace
151	LeavesQty	Yes	Quantity of shares still open for further execution. Will be zero if order is closed, otherwise will be Tag 38 (OrderQty) – Tag 14 (CumQty).
378	ExecRestatementReason	No	Only present when 150=D 5 = Order reduced due to Anti-Internalization
9730	LiquidityIndicator	No	Only included when OrdStatus Tag 39 = 1 or 2. Valid Values: A = Added Liquidity B = Added Hidden Liquidity R = Removed Liquidity D = Added Liquidity – Sub Dollar E = Added Hidden Liquidity – Sub Dollar H = Removed Liquidity – Sub Dollar X = Routed Execution – External ECN L = Routed Execution – OTC Link ATS P = Routed Execution – External Liquidity a = Added Liquidity during Closing Cross Auction r = Removed Liquidity during Closing Cross Auction d = Added Liquidity during Closing Cross Auction – Sub Dollar h = Removed Liquidity during Closing Cross Auction – Sub Dollar

3.8.2 Order Cancel Reject

System rejects of Cancel and Cancel / Replace requests are returned from OTC Link ECN using a FIX CancelReject (35 = 9) message.

Tag ID	Tag Name	Required	Description
35	MsgType	Yes	Will be "9"
11	ClOrdID	No	Echoed back if submitted on order
37	OrderID	Yes	Order ID assigned by the OTC Link ECN For Bulk Cancel rejects: "N/A" For Too Late To Cancel rejects: "NONE"
39	OrderStatus	Yes	Order Status of order that failed to be cancelled or replaced.
41	OrigClOrdID	No	The ClOrdID of order that failed to be cancelled or replaced.
58	Text	No	If present, indicates reason for reject.

OTC Link ECN FIX Specification 1.3.31

60	TransactTime	Yes	Date-time that transaction occurred in UTC format YYYYMMDD-HH:MM:SS.sss; where sss = milliseconds
102	CxlRejReason	No	Valid values: 0 = Too late to cancel 1 = Unknown order 3 = Already pending cancel or pending replace
434	CxlRegResponseTo	Yes	Valid values: 1 = Cancel request 2 = Cancel / Replace Request

4 Revision History

Version	Description of Version	Date Completed
1.3.30.1	Added new Self Trade Prevention options with NoSelfTrade Tag 7928. Clarified Execution Report and Order Cancel Reject may include tag 41 (OrigClOrdID). Documentation change only.	2026.06.03
1.3.30	Added Not Held execution instruction. It is accepted, but not processed. Clarified Post Only on Entry orders will not remove liquidity, when entered during the active trading session.	2025.12.09
1.3.29.3	Corrected typo that said TradingSessionID P1 or P2 cannot be entered alone. It should be P1 or P3 cannot be entered alone. P2 can be entered alone.	2025.05.28
1.3.29.2	Clarified that if an order includes both the ISO Tag 18 = 'f' execution instruction and the Route ISO or Ping ISO execution instruction, the ISO Tag 18 = 'f' is ignored.	2024.11.27
1.3.29.1	Removed note that Closing Cross Auction feature will not be available until a TBD future date. Removed note that GTX/GTC orders with P1 and P3 alone may be implemented at a future date.	2024.02.27
1.3.29	Added new added hidden liquidity codes.	2023.09.21
1.3.28	Removed special Closing Cross Auction liquidity codes 'p' and 't'.	2023.09.11
1.3.27	Added Closing Cross Auction feature and order types (not be available until a TBD future date).	2023.08.31
1.3.26	Added IOC after Cancel / Replace execution instruction. Clarified that when cancel/replacing pegged orders, ExecInst field must be populated with the same instructions as on the original order.	2023.01.31
1.3.25	Added Allow Price Sliding execution instruction.	2022.09.27
1.3.24	Added FIX Session Throttle Added Route ISO, Ping ISO, and Route Outside Normal Market Hours execution instructions.	2022.06.27
1.3.23	Added Ignore Erroneous Price Check execution instruction.	2022.04.19
1.3.22	Clarified if Non-Affiliate flag 9535 is included in Order Cancel / Replace Request, the value must match the original order.	2021.09.07
1.3.21	Added Non-Affiliate flag 9535. Removed CAT Phase 2c quoteID and quoteKeyDate to New Order Single message.	2021.05.14
1.3.20	Added Self Trade Prevention execution instruction.	2021.02.23
1.3.19	Added option to route IOCs to both OTC Link ATS and Global OTC.	2020.08.17
1.3.18	Added Execution Report LiquidityIndicator tag 9730 value 'P' for Routed Execution – External Liquidity. Clarified that IOC orders will match anytime during the full extended day (i.e., 8:00am to 5:00pm). Added optional CAT Phase 2c quoteID and quoteKeyDate to New Order Single message.	2020.07.31
1.3.17	Added that orders entered in non-Piggy Back Qualified securities that do not include Tag 9534 set to Y will be treated as fully hidden. Clarified OnBehalfOfSubID tag 116 can be cancel / replaced.	2020.01.13
1.3.16	Clarified Hours of Operation	2019.09.19

OTC Link ECN FIX Specification 1.3.31

	Removed references to future enhancements for extended hours orders, Peg orders and Route IOC orders. Added back references to Unsolicited Orders.	
1.3.15	Removed the option to route IOCs to both OTC Link ATS and Global OTC. The only option will be to route IOCs to only OTC Link ATS.	2019.04.23
1.3.14	Clarified that an order entered with OrdType tag 40 = 'P' (Pegged Order) requires ExecInst tag 18 to include either 'M' or 'R'.	2019.04.10
1.3.13	Added P1, P2 and P3 trading session tags 386 and 336 for GTX and modified GTC orders.	2019.04.03
1.3.12	Added Primary Peg order type to future enhancement. Added Route IOC and Route IOC to OTC Link ATS Only execution instructions to future enhancement. Added modified GTC order time in force to future enhancement.	2019.03.08
1.3.11	Added Fully Hidden order functionality, MaxFloor = 0 Removed restriction that non-zero MaxFloor must be in tier intervals. It must still be >= tier size.	2018.09.25
1.3.10	Changed maximum order quantity from 2,000,000,000 to 99,999,999.	2018.07.10
1.3.9	Clarified that all cancel / replaces messages will cause order to lose time priority. They will be considered a cancel / replaces from an OATS perspective (i.e., a CR OATS record will be recorded)	2018.06.12
1.3.8	Removed Restatement message, when order is refreshed from reserve. Restatements will still be sent, when order reduced due to anti-internalization. Clarified default behavior for ExecInst tag 18.	2018.06.01
1.3.7	Cancel / replace of MaxFloor has been implemented. Clarified cancel / replace of MaxFloor will lose time priority. Added MaxFloor to Execution Report	2018.04.06
1.3.6	Added Cancel / Replace and Partial Cancel business rules section. Clarified decrease in OrderQty will not cause the order to lose time priority. Added a future enhancement that MaxFloor can be cancel / replaced.	2018.03.09
1.3.5	Changed Execution Report LiquidityIndicator tag 9730 value 'X' to be Routed Execution – External ECN. Added Execution Report LiquidityIndicator tag 9730 value 'L' for Routed Execution – OTC Link ATS.	2017.11.20
1.3.4	Removed references to Full Quantity Routing and Sweep All. This is the default for initial release. Removed reference to Unsolicited Order. Not applicable for initial release.	2017.11.07
1.3.3	Clarified that tag 59 is not required in Execution Report message. Clarified tag 37 in Order Cancel Reject message	2017.10.24
1.3.2	Indicated MidPoint Peg order type and GTX time in force are planned future enhancements Indicated CxlRejReason (tag 102) in Order Cancel Reject message is not required	2017.09.29
1.3.1	Changed OTC Link ECN MPID to 'OTCX'	2017.09.20
1.3	Added TargetCompID to Standard Message Header Changed Order Cancel Reject tag 39 (OrderStatus) to be Order Status of order that failed to be cancelled or replaced	2017.08.17

OTC Link ECN FIX Specification 1.3.31

1.2	Added tag 378 = 5 (Order reduced due to Anti-Internalization) to Restated execution report. Removed TimeInForce value 4 (FOK) from New Order Single message	2017.07.25
1.1	Added TimeInForce value 4 (FOK) to New Order Single message Clarified that When an order is refreshed from reserve due to a partial fill, a Restated execution report (tag 150 = D and tag 378 = 99) will fill follow the partial fill execution report	2017.07.05
1.0	Initial version	2017.06.13
