Introduction

The Cboe Titanium U.S. Options Auction Feed specification may be used to deliver Auction message information for Cboe Options (C1) and EDGX Options Exchanges.

Table 1. Multicast Options Auction Feed Descriptions

EXCHANGE	SHAPING	SERVED FROM DATA CENTER (PRIMARY/SECONDARY)	MULTICAST FEED ID
C1 Options	Gig	Primary	CAA
C1 Options	Gig	Primary	CBA
C1 Options	Gig	Secondary	CEA
EDGX Options	Gig	Primary	EAA
EDGX Options	Gig	Primary	EBA
EDGX Options	Gig	Secondary	EEA

Cboe Members may also use Cboe Multicast PITCH to receive auction messages as well as real-time depth of book quotations and execution information. Refer to the [US Equities/Options Multicast Depth of Book \(PITCH\) Specification](#) for more information.

24x5 Feed Hours and System Restart (C1 Only)

For C1 Options operating in 24x5 mode, the Auction feed starts on Sunday at approximately 1:00 p.m. ET and shuts down on Friday at approximately 5:30 p.m. ET. A daily restart occurs between 5:30 and 7:00 p.m. ET each day at which time sequences will be reset. The daily restart is typically observed between 5:30 p.m. and 6:00 p.m. ET, but could occur later if needed for operational reasons. Feed startup and shutdown times may be adjusted without notice. Persisted GTC, GTD, and DAY orders are added back into the order book starting at approximately 10 minutes prior to the scheduled queuing time for each underlying symbol.

Feed Connectivity Requirements

Gig Shaped feeds are available to members with a minimum of 1 GB/s of connectivity to Cboe via cross connect or dedicated circuit.

Members with sufficient connectivity may choose to take both the Gig-Shaped feeds from one of Cboe datacenters and arbitrate the feeds to recover lost data. Alternatively, members may choose to arbitrate feeds from both datacenters. It should be noted that feeds from the secondary datacenter will have additional latency for those connected with Cboe in the primary data center due to proximity and business continuity processing.

Cboe Options Auction Feed real-time events are delivered using a published range of multicast addresses divided by symbol range units.

Protocol

C1 and EDGX Options users may receive the Cboe Options Auction Feed protocol over multicast only.

The Cboe Options Auction Feed cannot be used to enter orders. For Cboe Options Auction order entry, refer to the Cboe US Options [FIX](#) or [BOE](#) specifications.

Message Format

Cboe Options Auction Feed protocol messages are delivered un-sequenced and may not be retrieved if missed.

Cboe Members familiar with the Multicast Depth of Book protocol should find it very easy to reuse that code to process the Cboe Options Auction Feed. All multicast delivered events will be self-contained. Developers can assume that delivered data will not cross frame boundaries and a single Ethernet frame will contain only one Unit Header with associated data.

The Cboe Options Auction Feed is comprised of a series of dynamic length un-sequenced messages. Each message begins with *Length* and *Message Type* fields. Cboe reserves the right to add message types and grow the length of any message without notice. Members should develop their decoders to handle unknown message types and messages beyond the expected length. Messages will only be grown to add additional data to the end of a message.

Data Types

The following field types are used within the **Sequenced Unit Header** and PITCH 2.X.

- **Alphanumeric** fields are left justified ASCII fields and space padded on the right.
- **Binary** fields are unsigned and sized to Length bytes and ordered using Little Endian convention (least significant byte first).
- **Binary Long Price** fields are unsigned Little Endian encoded 8 byte binary fields with 4 implied decimal places (denominator=10,000).
- **Multiplier** fields are unsigned Little Endian encoded 4 byte binary fields with 1 implied decimal place (denominator=10).
- **Bit Field** fields are fixed width fields with each bit representing a Boolean flag (the 0 bit is the lowest significant bit; the 7 bit is the highest significant bit).
- **Printable ASCII** fields are left justified ASCII fields that are space padded on the right that may include ASCII values in the range of 0x20 - 0x7e.
- **Binary Date** fields are 4 byte unsigned Little Endian values where the base-10 representation is the YYYYMMDD representation of that date. For example, October 30, 2023 would be represented as 20,231,030 (20231030).
- **Time Offset** fields are 4 byte unsigned Little Endian values that represent the number of nanoseconds since the last **Time** message. These fields are populated to nanosecond precision. For example, a nano time of 1,737,580,407,123,456,789 ("Wednesday, January 22, 2025 9:13:27.123456789") would return value = 123456789.

Sequenced Unit Header

The **Sequenced Unit Header** is used for all Cboe Options Auction Feed messages.

Unsequenced data may be delivered using the **Sequenced Unit Header**. Sequenced headers will have a 0 value for the sequence field and potentially for the unit field.

Table 2. Sequenced Unit Header

FIELD	OFFSET	LENGTH	VALUE/TYPE	DESCRIPTION
<i>Hdr Length</i>	0	2	Binary	Length of entire block of messages. Includes this header and <i>Hdr Count</i> messages to follow.
<i>Hdr Count</i>	2	1	Binary	Number of messages to follow this header.
<i>Hdr Unit</i>	3	1	Binary	Unit that applies to messages included in this header.
<i>Hdr Sequence</i>	4	4	Binary	Will be zero.
Total Length = 8 bytes				

Heartbeat Messages

The **Sequenced Unit Header** with a count field set to 0 will be used for heartbeat messages. During trading hours heartbeat messages will be sent if no data has been delivered within 1 second.

Outside of trading hours Cboe sends heartbeat messages on all real-time channels to help users validate multicast connectivity. Heartbeat messages may not be sent from 12:00 a.m. - 1:00 a.m. ET or during maintenance windows.

Cboe Options Auction Feed Messages

Time Reference (C1 Only)

The **Time Reference** message is used to provide a midnight reference point for recipients of the feed. It is sent whenever the system starts up and when the system crosses a midnight boundary. All subsequent **Time** messages for the same unit will use the last **Midnight Reference** until another **Time Reference** message is received for that unit. The **Time Reference** message includes the *Trade Date*, so most other sequenced messages will not include that information.

Time Reference messages will be included in a spin response.

Table 3. Time Reference

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field.
<i>Message Type</i>	1	1	0xB1	Time Reference Message
<i>Midnight Reference</i>	2	4	Binary	Midnight Eastern Time reference time for subsequent Time messages, expressed as number of whole seconds since the Epoch (midnight January 1, 1970 UTC).
<i>Time</i>	6	4	Binary	Number of whole seconds elapsed since the start of the current Eastern Time calendar day, derived by converting the current Eastern wall clock time (HH:MM:SS) to seconds. On Daylight Saving Time transition days, <i>Time</i> reflects wall clock seconds and does not adjust for the UTC offset change. On a DST spring-forward day, the maximum value will be 82,799 (23 hours). On a DST fall-back day, values between 3,600 and 7,199 will appear twice. Recipients requiring unambiguous absolute timestamps should use <i>Epoch Time</i> (where available) or <i>Midnight Reference</i> in the Time Reference message.
<i>Time Offset</i>	10	4	Time Offset	Nanosecond offset from last unit timestamp.
<i>Trade Date</i>	14	4	Binary Date	Current Trade Date
Total Length=18 bytes				

Time

A **Time** message is immediately generated and sent when there is an Auction event for a given clock second. If there is no Auction event for a given clock second, then no **Time** message is sent for that second. All subsequent time offset fields for the same unit will use the new **Time** value as the base until another **Time** message is received for the same unit.

Table 4. Time

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x20	Time Message
<i>Time</i>	2	4	Binary	Number of whole seconds elapsed since the start of the current Eastern Time calendar day, derived by converting the current Eastern wall clock time (HH:MM:SS) to seconds. On Daylight Saving Time transition days, <i>Time</i> reflects wall clock seconds and does not adjust for the UTC offset change. On a DST spring-forward day, the maximum value will be 82,799 (23 hours). On a DST fall-back day, values between 3,600 and 7,199 will appear twice. Recipients requiring unambiguous absolute timestamps should use <i>Epoch Time</i> (where available) or <i>Midnight Reference</i> in the Time Reference message.
<i>Epoch Time</i>	6	4	Binary	C1 Only Number of whole seconds since the Epoch (midnight January 1, 1970 UTC).
Total Length = 6 bytes, 10 bytes on C1 Only				

Unit Clear

The **Unit Clear** message instructs feed recipients to clear all orders for the Cboe book in the unit specified in the **Sequenced Unit Header**. This message will be sent at startup each day. It would also be distributed in certain recovery events such as a data center fail-over.

Table 5. Unit Clear

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x97	Unit Clear Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp
Total Length=6 bytes				

Auction Notification

Auction Notification messages are used to disseminate order details of an auction. Auctions will be available for a defined period of time known as the exposure period.

Table 6. Auction Notification

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0xAD	Auction Notification Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp
<i>Symbol</i>	6	6	Printable ASCII	<i>Symbol</i> right padded with spaces.
<i>Auction ID</i>	12	8	Binary	Day specific identifier assigned to this auction.
<i>Auction Type</i>	20	1	Alphanumeric	B=AIM S=Solicitation Auction Mechanism T=Step Up Mechanism (SUM) A=SUM All or None
<i>Side</i>	21	1	Alphanumeric	"B" or "S"
<i>Price</i>	22	8	Binary Long Price	For SUM this will reflect the NBBO price of the opposite side of the auction at the time of entry. For AIM on EDGX, <i>Price</i> will be the auction start price. For SPX/SPXW AIM on C1, <i>Price</i> will be the auction start price, otherwise 0. For SAM, this will reflect the limit price specified on the order.
<i>Contracts</i>	30	4	Binary	Number of contracts available in the auction.
<i>Customer Indicator</i>	34	1	Alphanumeric	N=Non-Customer C=Customer
<i>ParticipantID</i>	35	4	Alphanumeric	Executing Broker (optional) of firm attributed to this quote
<i>Auction End Offset</i>	39	4	Binary	Nanosecond offset from last timestamp
<i>Client ID</i>	43	4	Alphanumeric	Optional user specified value attributed to this quote.
Total Length=47 bytes				

Auction Cancel

Auction Cancel messages are used to disseminate the cancellation of an earlier **Auction Notification** message as a result of a user cancellation of the original order, a user modification request to change the price or increase the original order quantity, or a fading of the NBBO.

A user request to modify the order price or to increase the original order quantity will result in a cancellation of the auction followed by a new **Auction Notification** message. **Auction Cancel** messages will not be issued for order quantity decrements.

Table 7. Auction Cancel

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0xAE	Auction Cancel Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp
<i>Auction ID</i>	6	8	Binary	Day specific identifier assigned to this auction
Total Length=14 bytes				

Auction Trade

Auction Trade messages are used to disseminate executions resulting from an options auction.

Table 8. Auction Trade

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0xAF	Auction Trade Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp
<i>Auction ID</i>	6	8	Binary	Day specific identifier assigned to this auction
<i>Execution ID</i>	14	8	Binary	Day specific identifier assigned to this execution
<i>Price</i>	22	8	Binary Long Price	Trade price
<i>Contracts</i>	30	4	Binary	Number of contracts traded
Total Length=34 bytes				

Options Auction Update

Options Auction Update messages are used to disseminate price and size information and Composite Market bid and offer prices during Opening and Re-Opening (halt) auctions on the Cboe Options Exchange. **Options Auction Update** messages are sent every five seconds during an opening period provided that one of the field values has changed. When no values have changed, a message is sent once every 60 seconds. Refer to the [Cboe Options Opening Process](#) specification for more information.

Table 9. Options Auction Update

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field.
<i>Message Type</i>	1	1	0xD1	Options Auction Update Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp.
<i>Symbol</i>	6	8	Printable ASCII	<i>Symbol</i> right padded with spaces.
<i>Auction Type</i>	14	1	Alphanumeric	G=GTH Opening (C1 only) O=RTH Opening (C1 Only) H=Halt Re-Opening V=Volatility Opening
<i>Reference Price</i>	15	8	Binary Long Price	Collared VMIM price computed on the queuing book only.
<i>Buy Contracts</i>	23	4	Binary	Cumulative Buy contracts at the <i>Reference Price</i> and above.
<i>Sell Contracts</i>	27	4	Binary	Cumulative Sell contracts at the <i>Reference Price</i> and below.
<i>Indicative Price</i>	31	8	Binary Long Price	Collared VMIM price computed on the combined queuing book and the continuous book. Equal to <i>Reference Price</i> for options that do not have a GTH trading session.
<i>Auction Only Price</i>	39	8	Binary Long Price	Uncollared VMIM price computed on the queuing book only.
<i>Opening Condition</i>	47	1	Alphanumeric	O=Would open Q=Need quote to open B=Need more buyers (C1 Only) S=Need more sellers (C1 Only) C=Crossed Composite Market
<i>Composite Market Bid Price</i>	48	8	Binary Long Price	Bid Price of the prevailing Composite Market
<i>Composite Market Offer Price</i>	56	8	Binary Long Price	Offer Price of the prevailing Composite Market.
Total Length=64 bytes				

Auction Summary

Auction Summary messages are used to disseminate the results of the Opening and Re-Opening process. An Opening or Re-Opening **Auction Summary** message for each symbol is sent at the conclusion of the Opening or Re-Opening process and represents the Cboe opening price.

Table 10. Auction Summary

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field.
<i>Message Type</i>	1	1	0x96	Auction Summary Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp.
<i>Symbol</i>	6	8	Printable ASCII	<i>Symbol</i> right padded with spaces.
<i>Auction Type</i>	14	1	Alphanumeric	G=GTH Opening (C1 Only) O=RTH Opening (C1 Only) H=Halt Re-Opening V=Volatility Opening
<i>Price</i>	15	8	Binary Long Price	Auction price.
<i>Quantity</i>	23	4	Binary	Cumulative number of contracts executed during the auction.
Total Length=27 bytes				

Width Update

The **Width Update** message is used to communicate opening quote width multiplier. This message will be sent in the event that the exchange decides to change the quote width multiplier on a per underlying basis. For complete details on the opening collars see the [Cboe Opening Process Specification](#).

Table 11. Width Update

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field.
<i>Message Type</i>	1	1	0xD2	Width Update Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp.
<i>Underlying</i>	6	8	Printable ASCII	Underlying right padded with spaces.
<i>Width Type</i>	14	1	Alphanumeric	R=Regular V=Volatility
<i>Multiplier</i>	15	4	Multiplier	Width multiplier.
Total Length=19 bytes				

Symbol Mapping

A **Symbol Mapping** message is used to map the 6 character multicast feed symbol field to an OSI symbol. These messages are sent continuously through the day at variable rates as bandwidth allows. Members who consume the Options Auction feed will be able to receive the full list of symbols in approximately 30 minutes.

Table 12. Symbol Mapping

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x2E	Symbol Mapping Message
<i>Feed Symbol</i>	2	6	Printable ASCII	Symbol right padded with spaces
<i>OSI Symbol</i>	8	21	Printable ASCII	OSI Symbol
<i>Symbol Condition</i>	29	1	Alphanumeric	N = Normal C = Closing Only
<i>Underlying</i>	30	8	Alphanumeric	Symbol of underlying instrument right padded with spaces.
Total Length = 38 bytes				

End of Session

The **End of Session** message is sent for each unit when the unit shuts down. No more auction messages will be delivered for this unit, but heartbeats from the unit may be received.

Table 13. End of Session

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x2D	End of Session Message
<i>Timestamp</i>	2	4	Binary	Nanosecond offset from last unit timestamp.
Total Length = 6 bytes				

SOQ Strike Range Update (C1 Only)

The **SOQ Strike Range Update** message is only available on the C1 Exchange. This message disseminates the minimum and maximum strike prices of the strike price range used to calculate the Special Opening Quote (SOQ) on a Volatility Settlement date. In the event that multiple distinct SOQ calculations occur on the same day, the applicable SOQ is differentiated by the *SOQ Identifier* field, which is set to the CSMi symbol on which the final settlement SOQ value is disseminated.

Table 14. SOQ Strike Range Update

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0x9D	SOQ Strike Range Update Message
<i>Time Offset</i>	2	4	Time Offset	Nanosecond offset from last unit timestamp
<i>SOQ Identifier</i>	6	20	Printable ASCII	Dissemination symbol of the final SOQ right padded with spaces.
<i>Lower Strike Price</i>	26	8	Binary Long Price	SOQ lower strike price
<i>Upper Strike Price</i>	34	8	Binary Long Price	SOQ upper strike price
Total Length=42 bytes				

Constituent Symbol Mapping (C1 Only)

The **Constituent Symbol Mapping** message is only available on the C1 Exchange. This message is used to communicate which options series (if any) are Constituent Series in a Volatility Settlement Special Opening Quote (SOQ). The message is identical to the **Symbol Mapping** message with the addition of the *SOQ Identifier* field, which is set to the CSMi symbol on which the final settlement SOQ value is disseminated. The **Constituent Symbol Mapping** message is sent as an unsequenced message with one message sent for each Constituent Series in a continuous loop as bandwidth allows.

Table 15. Constituent Symbol Mapping

FIELD NAME	OFFSET	LENGTH	TYPE/(VALUE)	DESCRIPTION
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0x9E	Constituent Symbol Mapping Message.
<i>Feed Symbol</i>	2	6	Printable ASCII	<i>Symbol</i> right padded with spaces
<i>OSI Symbol</i>	8	21	Printable ASCII	OSI Symbol
<i>Symbol Condition</i>	29	1	Alphanumeric	N = Normal C = Closing Only
<i>Underlying</i>	30	8	Alphanumeric	Symbol of underlying equity right padded with spaces.
<i>SOQ Identifier</i>	38	20	Printable ASCII	Dissemination symbol of the final SOQ right padded with spaces.
Total Length = 58 bytes				

Message Types

0xB1	Time Reference(C1 Only)
0x20	Time
0x97	Unit Clear
0xAD	Auction Notification
0xAE	Auction Cancel
0xAF	Auction Trade
0xD1	Options Auction Update
0x96	Auction Summary
0xD2	Width Update
0x2E	Symbol Mapping
0x2D	End of Session
0x9D	SOQ Strike Range Update
0x9E	Constituent Symbol Mapping

Example Messages

Each of the following message types must be wrapped by a [sequenced unit header](#) on page 7. Note that in the following examples, each byte is represented by two hexadecimal digits.

Sequenced Unit Header

Hdr Length	31 00	49 bytes, including header
Hdr Count	02	2 messages to follow
Hdr Unit	01	Unit 1
Hdr Sequence	00 00 00 00	Always set to zero

Multicast Configuration

US Options Production Environment Configuration

Limitations/Configurations

The following table defines Cboe current configuration for network and gap request limitations. These limitations are session based. Cboe reserves the right to adjust the gap request limitations to improve the effectiveness of the gap request infrastructure.

PERIOD/TYPE	LIMIT/SETTING	NOTES
MTU	1500	Cboe will send UDP messages up to 1500 bytes. Members should ensure that their infrastructure is configured accordingly.
Gig-Shaped Throttle	1 Gb/s	The real-time and gap multicast head ends are configured to shape their output to this level to minimize packet loss.

US Options Unit/Product Distribution

Connectivity

Supported Extranet Carriers

The Cboe Options Auction Feed will be made available to Members through extranet carriers that have completed their multicast implementation and certified with Cboe on a per-market basis. Cboe has certified a number of carriers for redistribution of Cboe Multicast data feeds as outlined in the [Cboe Connectivity Manual](#). For more information on receiving the Cboe Options Auction Feed through any of these providers, please refer to the vendor contact information noted in the Extranet Providers section of the Connectivity Manual.

References

For more information on Cboe Symbology, please refer to the [Cboe Symbology Reference](#) document.

Support

Please direct questions or comments regarding this specification to tradedesk@cboe.com.

Revision History

DOCUMENT VERSION	DATE	DESCRIPTION
1.0.0	05/17/16	Initial version 1.0.0.
1.0.1	05/31/16	Added Ips and Port Numbers to the EDGX Options Certification Address/Unit Distribution table.
1.0.2	06/28/16	Added Ips and Port Numbers to the EDGX Options Production Address/Unit Distribution table. Updated the Sequenced Unit Header to 8 bytes. Removal of NBBO Price from Auction Notification message.
1.0.3	08/01/16	Added support for BAM Auctions.
1.0.4	01/06/17	Updated description of Auction Trade message.
1.0.5	10/17/17	Cboe branding/logo changes.
1.0.6	03/08/18	Updated Unit Distribution ranges.
1.0.7	03/23/18	Updated Unit Distribution ranges effective date updated to 4/14/18.
1.0.8	6/28/2018	Added Multicast Options Auction Feed Descriptions table. Added Feed Connectivity Requirements section. Added feed shaping information to source network headers.
1.1.0	11/16/18	Added support for C1 Options Feed.
1.1.1	12/06/18	Added notes indicating Feature Pack 4 updates.
1.1.2	03/07/19	Added matching engine unit 33 information in support of XSP trading on EDGX Options effective 04/08/19. Added C1 certification primary data center rendezvous point IP address, unit distribution, and C1 Certification symbol ranges.
1.1.3	04/05/19	Correction to EDGX Options Gig Shaped EAA, EBA and EEA Feeds for Unit 33
1.1.4	04/15/19	Added Production IP addresses for C1 Options.
1.1.5	05/01/19	Added notes indicating Options Auction Update , Auction Summary , and Width Update messages will be disseminated for EDGX options, effective with C1 Feature Pack 7.
1.1.6	05/14/19	Corrected description of Width Update message to indicate that message is only sent in the event that baseline MCW and OCW values are modified from their original state. Updated Options Auction Update message with <i>Opening Condition</i> = C (Crossed Composite Market), and addition Composite Market Bid and Offer price fields. Added soq Strike Range Update message. Update example for Options Auction Update and added example for soq Strike Range messages. Added additional proprietary products to matching unit 31 in C1.
1.1.7	05/20/19	Added Constituent Symbol Mapping message with example.
1.1.8	06/12/19	Corrected certification and production C1 symbol range for units 9 and 20.
1.1.9	07/12/19	Updated Symbol Mapping mapping description to indicate that full list of symbols should be received in approximately 30 minutes.
1.1.10	7/25/19	Added notes indicating Options Auction Update message <i>Opening Condition</i> values 'B' and 'S' are only applicable to the Cboe Options Exchange ("C1").
1.1.11	9/18/19	Corrected Symbol Mapping Message and Constituent Symbol Mapping examples.
1.1.12	1/31/20	Corrected UKXM and QQQ symbol entries in Unit Distribution table. Clarified description of Time message. Updated SAM effective date for EDGX to 2/3/20.
1.1.13	8/27/20	Added SPESG to the Unit Symbol Distribution tables for C1 unit 31 (effective 09/21/20).
1.1.14	10/06/20	Added SPESG to the Unit Symbol Distribution table Exclusion entries for C1.
1.1.15	10/20/20	Removed XSP from the Unit Symbol Distribution tables on EDGX (effective 11/2/20).

DOCUMENT VERSION	DATE	DESCRIPTION
1.1.16	01/22/21	Updated <i>Price</i> field description on Auction Notification message to indicate that for SPX and SPXW AIM, this field will reflect the auction price (C1 Only) (effective 02/22/21).
1.1.17	02/01/21	Added MRUT to the Unit/Product Distribution tables for C1 unit 31 (effective 3/01/21). Added new updated Unit/Product Distribution tables with harmonized symbol ranges (effective 3/22/21).
1.1.18	03/25/21	Added Binary Date field type to Section 2.2 - Data Types (effective 10/10/21 TBD-09/27/21 Q3 2021). Added new Time Reference message (effective 10/10/21 TBD-09/27/21 Q3 2021). Added <i>EpochTime</i> field to Time message (effective 10/10/21 TBD-09/27/21 Q3 2021). Updated description of <i>Auction Type</i> field on Options Auction Update and Auction Summary messages (effective TBD-09/27/21 Q3 2021).
1.1.19	05/13/21	Updated Curb session effective date to TBD 09/27/21.
1.1.20	08/25/21	Updated Curb session effective date to TBD.
1.1.21	09/09/21	Updated description of <i>Auction Type</i> field on Options Auction Update and Auction Summary messages (effective TBD).
1.1.22	09/30/21	Updated effective date for new Time Reference message (C1 Only), <i>EpochTime</i> field to Time message (C1 Only), and Binary Date field type to Section 2.2 - Data Types to 10/10/21. Added new section 1.1 - '24x5 Feed Hours and System Restart (C1 Only)' (effective 10/10/21).
1.1.23	11/04/21	Corrected example Time message values. Removed note indicating <i>Auction Type</i> = 0 will be sent prior to Curb session. This value will only be sent for the RTH Opening.
