

Cboe Canada Multicast PITCH and BOE Specification Updates

Reference ID: C2025031200

OVERVIEW

Effective March 12, 2025, Cboe Canada Inc. (“Cboe Canada”) is pleased to announce the immediate availability of two updated technical specifications, as follows:

- the Cboe Titanium Cboe Canada Multicast PITCH Specification (the “Multicast PITCH Specification”); and
- the Cboe Titanium Cboe Canada Binary Order Entry Version 3 Specification (the “BOE Specification”).

TECHNICAL DETAILS

Multicast PITCH Specification

Cboe Canada has updated the *Reserved* byte in the *Order Executed* message to an *Execution Flags* bit field with an “Auction flag” marker, which will allow clients to determine by automated means which *Order Executed* messages are part of an auction. The new *Execution Flags* field is as follows:

Field Name	Offset	Length	Type/(Value)	Description
<i>Execution Flags</i>	35	1	Bit Field	Bit 0: Reserved Bit 1: Auction flag 0 = Not an Auction Trade 1 = Auction Trade Bit 2-7: Reserved

This change is being made as an enhancement that will better align with a similar pre-migration market data functionality.

Real-time market data consumers who do not require this information can continue to ignore this field. Please see the [Cboe Titanium Cboe Canada Multicast PITCH Specification](#) for full details.

BOE Specification

Cboe Canada has added a new *NewOrderCrossCAEquitiesV2* message for intentional crosses that includes an additional *Anonymous* field. Cross trades do not anonymize the identity of the Member (i.e., *BrokerID* number) unless entered via this new *NewOrderCrossCAEquitiesV2* message with the *Anonymous* field set to ‘Y’. The existing *NewOrderCrossCAEquitiesV1* message will be sunset at a future date which will be communicated by notice to Members.

Please see the *New Order Cross* message in the [Cboe Titanium Cboe Canada BOE Specification](#) for full details.

TESTING OPPORTUNITIES

These changes are currently available to test in the Cboe Canada certification environment.

ADDITIONAL INFORMATION
